CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent Engineers, Architects, Agricultural Societies of England, Scotland, and Ireland, as amongst others shown in Agricultural Society's House in Hanover-square. Its Advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any width, by 36 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the kingdom on application. DRY HAIR FELT, for covering Joists &c., also kept constantly in stock, and supplied at a very low price. The TRADE are respectfully informed that the Felt used in the Exhibition Building was supplied by F. McNEILL & CO.'S Manufactory, and all Letters and Orders for the Felt used therein should be addressed to the FACTORY, as the Contractors for the Building have no connection with the Sale of the Felt. Observe the Name and Address, F. McNEILL & CO., LAMB'S BUILDINGS, BUNHILL ROW. Beware of Spurious Imitations. The only Genuine Felt is made at F. McNEILL & CO.'S Manufactory, LAMB'S BUILDINGS, BUNHILL ROW. Each Roll bears a Label with McNEILL'S FELT on it. Sold at the CAMPS of ALDERSHOTT, CURRAGH, HOUNSLOW, and ONLY RESPECTABLE Agents of the Manufacturers in the Principal Towns of England. Also at the Depôts of the Royal Engineers, Royal Artillery, and Royal Marines. Price 1s. per Square of 100 Superficial Feet. A Liberal Discount allowed to the Trade.

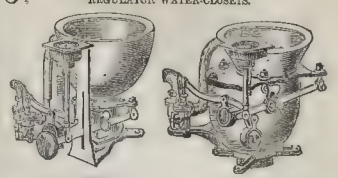
CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person. 5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small. 6th. Under slate, metal, or tiles, it is a most effective non conductor.

INODOROUS FELT, for damp walls and roofs, for granaries and floor cloths. Price ONE PENNY per Square Foot.



CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. prevents the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

Tenders must be made upon a printed form, which may be obtained from the Director of Contracts, War Office, Pall-mall; or at the Military Store Office, Woolwich; and are to be delivered at the War Office, Pall-mall, on or before the 25th MAY, 1864, addressed to the Under Secretary of State for War, and marked on the outside "Tender for the purchase of Old Brass, &c."
The Secretary of State reserves the right of rejecting any or all of the Tenders.
THOMAS HOWELL,
War Office, 10th May, 1864 Director of Contracts.

WAR DEPARTMENT CONTRACT.
NOTICE to BUILDERS.
TENDERS are required for the PERFORMANCE of certain WORK in connexion with ALLERATIONS and IMPROVEMENTS to Right Wing of Soldiers' Quarters, Hulme Barracks, Manchester.
Parties desiring to Tender for the execution of these Works must leave their names at this Office, on or before the 25th instant, and pay the sum of 10s. 6d. for the bill of quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.
The Secretary of State does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, 225, Shetford road, Manchester,
May 11, 1864.

ARMY CONTRACTS.—TENDERS will be received at this Office until TWELVE o'clock, Noon, on MONDAY, the 23rd instant, from persons who may be willing to enter into CONTRACT for the SUPPLY of FORAGE, in ovts, &c., as may be required, for four months, from the 1st JULY next, to 10th Nov. next, for the use of Her Majesty's Forces stationed at Aldershott Camp and within the command.
Forms of Tender and Conditions of Contract may be obtained on application at this Office, by letter addressed to the Storekeeper's Clerk, Office, or in person, between the hours of TEN and FOUR o'clock.
The Tenders must be properly filled up, signed, and delivered at this Office under closed envelope, marked on the outside "Tender for Forage," and no Tenders will be noticed unless made on forms obtained from this Office, and delivered by the hour above appointed.
Commissariat Office, Aldershott, 7th May, 1864.

VESTRY of ST. GILES, CAMBERWELL.
TO SEWER CONTRACTORS and OTHERS.—The Sewers and Sanitary Committee will meet at the Vestry Hall on TUESDAY, the 24th day of MAY, 1864, at Half-past SIX o'clock precisely, to receive TENDERS for the EXECUTION of SEWERS WORKS, comprising about 1,850 feet 3 feet 9 inches by 2 feet 6 inches 1-brick sewer; 1,900 feet 3 feet by 2 feet 1 brick sewer; 100 feet 2 feet 6 inches barrel brick sewer; 3,800 feet 12-inch pipe sewer. Printed forms of Tender will be supplied, and no Tender will be received unless in a manner with the instructions contained in the specifications and conditions; and the parties Tendering must be in attendance when the Tenders are opened. The Committee do not bind themselves to accept the lowest or any Tender. Particulars to be obtained on application to Mr. J. C. REYNOLDS, Surveyor to the Vestry, at the Office of Works, Wellstreet, Camberwell, between the hours of ELEVEN and THREE, on and after MONDAY next, the 16th MAY, 1864.
GEO. WM. MARSDEN, Vestry Clerk.
Vestry Hall, Camberwell, May 11, 1864.

CONTRACTS.

TO BUILDERS or CONTRACTORS.—The Directors of the Great Western and Brentford Railway Company are prepared to receive TENDERS for the CONSTRUCTION of about 750 lineal yards of BRICK WALLING, about 150 lineal yards of BRICK DRAIN, and about 40 lineal yards of TIMBER WHARFING, near to the Brentford Docks. Working drawings and specifications can be seen at the Office of the Engineer, F. F. MURRAY, Esq. 27, Great George-street, Westminster, on and after the 9th instant. Tenders, addressed to the Secretary of the Company, must be received at the Company's Offices, on or before the 23rd instant. The Directors do not bind themselves to accept the lowest or any Tender.—By order.
27, Great George-street, Westminster, S.W. May 9th, 1864.

TO BUILDERS and CONTRACTORS.—The Building Committee of the St. Thomas Lunatic Hospital are desirous of receiving TENDERS for the ERECTION of a new LUNATIC HOSPITAL on a piece of land near the Topsham Barracks, in the parish of Heavitree, Devon, according to plans and specifications which may be seen at my Office. Sealed Tenders are to be delivered to me on or before MONDAY, JUNE 13th, 1864, endorsed "Tender for Lunatic Hospital." The Contractor will be required to provide sureties for the due and satisfactory performance of the contract. The Committee do not bind themselves to accept the lowest or any Tender, and no payment will be made for estimates.
W. J. CROSS, Architect, Queen street, Exeter.
May 2nd, 1864.

LONDON and NORTH-WESTERN RAILWAY. TO CONTRACTORS and BUILDERS.—The Directors are prepared to receive TENDERS for the ERECTION of a LOCOMOTIVE ENGINE SHED (to contain sixty Engines) and OFFICES, at Edge Hill, Liverpool. Parties desirous of tendering may see the drawings, and obtain a statement of the quantities, upon application to Mr WILLIAM BAKER, Engineer's Office, Euston Station. All Tenders to be delivered on WEDNESDAY, MAY 18th, between the hours of TEN and FOUR o'clock. Tenders, addressed to the Secretary, at the Euston Station, to be sent in on or before WEDNESDAY, MAY the 18th. The Directors do not bind themselves to accept the lowest Tender.
CHAS. E. STEWART, Sec.
Euston Station, April, 1864.

TO CONTRACTORS, BUILDERS, and OTHERS.—DURHAM COUNTY JAIL. NEW WING TO THE FEMALE PRISON. The Visiting Justices are desirous of receiving TENDERS for the COMPLETION of the several BUILDINGS and WORKS for the proposed Additions of New Wing to the Female Prison of the County Jail in Durham. The plans, specifications for the respective works may be inspected and perused at the Office of WILLIAM CROZIER, Esq. C.E. the County Surveyor, County Courts, Durham, on and after WEDNESDAY, the 4th MAY next. Tenders to specify distinctly upon every part, and strictly in accordance with the prescribed Forms, which may be had and read over at the "New Wing to Female Prison, Durham," to be sent or delivered to the County Architect not later than TUESDAY, the 17th MAY next. The Visiting Justices do not pledge themselves to accept the lowest or any Tender.—By order,
JOHN TIPLADY, Deputy Clerk of the Peace.
Durham, 27th April, 1864.

PARISH of ST. MARY ABBOTTS, KENSINGTON, in the County of Middlesex. CONTRACT for BROKEN BLUE GUERNSEY GRANITE.—The Works, Buildings, and Sanitary Committee will meet at the Vestry Hall, Kensington, on FRIDAY, the 27th day of MAY instant, to receive TENDERS for the SUPPLY of 2,000 Yards of BROKEN BLUE GUERNSEY GRANITE, to be delivered at the Contractor's Premises at the New Dock, Hammersmith, free of all tolls and charges, and in such quantities at a time as may be directed by Mr. JAMES BROADBRIDGE, the Surveyor to the Vestry, the whole quantity to be delivered before the last day of SEPTEMBER next, and to be of best soap, hard stone. Guide as the Vestry may require, to the 30th day of APRIL, 1865. Forms of Tender and all particulars may be obtained on application at Mr. BROADBRIDGE'S Office, Vestry Hall, aforesaid. Tenders to be sealed, and endorsed "Tender for Granite," and to be delivered at his Office, before Twelve o'clock at Noon, on the day of FRIDAY, the 27th instant. No Tender will be received unless made upon one of the printed forms. The Vestry do not bind themselves to accept the lowest or any Tender. The contract to be under a written contract, and to pay for stamps thereof.—By order,
REUBEN G. PEN, Clerk of the Vestry.
Vestry Hall, Kensington, 11th May, 1864.

PERSONS desiring to TENDER for the ERECTION of a NEW CHURCH at BRITONFERRY, may see the Drawing and Specification at the Office of Mr. LEWIS, at Britonferry, on and after the 16th day of MAY next. Tenders are to be sent to the Rev. D. LEWIS, Britonferry, Glamorganshire, by SIX o'clock p.m. on FRIDAY, the 10th of JUNE. The right of rejecting all or any of the Tenders is reserved.
JNO PRICHARD, Diocesan Architect.
Llandaff, May 13th, 1864.

TO BUILDERS and OTHERS.—Persons desirous of submitting TENDERS for the ERECTION of a NEW HOUSE of STABLING, &c. at Hendre, Llanfair Dyffryn Clwyd, for Preece, Higgon, Esq., may see the plans and specifications at Mr. SINGLES', Llanarmon, Denbighshire, on MONDAY, the 16th inst. to MONDAY, the 23rd inst. between the hours of 10 in the morning and SIX in the evening. Tenders may be obtained by application to Mr. DAVIES, Surveyor, Ruthin. Tenders to be sent to Mr. MORGAN, Llanfair, on or before 11 o'clock, on the 25th inst. Mr. MORGAN does not bind himself to take the lowest or any Tender.

TO BUILDERS. — Builders desirous of TENDERING for the ERECTION of a New CHURCH at Shadwell near Ashburton, may see the drawings and specification at the Rectory House, Shadwell, on and after the 23rd inst. Tenders to be delivered at the Office of the Architect, Mr. JOHN COLSON, 32 Staplehurst-street, Bristol, on or before 12 o'clock on the 2nd of JUNE next. No tender to be given to accept the lowest or any Tender.
May 14, 1864.

[For remainder of Contracts see next Page.

CONTRACTS.

TO BUILDERS. Persons desirous of submitting TENDERS for ALTERATIONS and DECORATIONS at the Prince of Wales Tavern, Prince of Wales Road, Kentish Town, St. Pancras, may see the plans and specifications on and after Monday at the Bar as above, on and after the 17th instant. The Tenders to be opened on the 24th instant. The Proprietor does not pledge himself to accept the lowest Tender.

THE Directors of the Great Central Gas Company are prepared to receive TENDERS for the TAR manufactured at the Works, for the year ending July 1st, 1865.—Particulars of quantity and delivery may be obtained on application to the Manager, at the Works, New Common, E. Tenders to be sent to the Office of the Company, 23, Coleman street, E.C., on or before 24th JUNE, 1864.
11th May, 1864.

TO SEWER CONTRACTORS.—The Board of Works for the Fulham District, in the county of Middlesex, hereby give notice that they will be ready, at the Board Meeting to be held at Broadway House, Hammersmith, on WEDNESDAY the 1st day of JUNE 1864 at TEN o'clock precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and completely FINISHING a certain intended BRICK SEWER, of about 1,675 feet in length, and other WORKS connected therewith, in the parish of Fulham from Waltham Green Church to the Great Western Road at North End. Plans specification, and detail drawings of the works to be executed may be examined and the form of Tender may, with other particulars, be obtained at Broadway House, Hammersmith, between the hours of TEN a.m. and FOUR p.m. on any day previously to the 31st day of MAY, 1864. The sealed Tenders to be addressed to the Chairman of the Board, on or before TEN o'clock of the said 1st day of JUNE, indorsed on the outside "Tender for Sewers," and the party whose Tender may be accepted will be required to enter into a Contract and Bond with two sufficient sureties, for the due performance of the undertaking, such Contract and Bond to be prepared by the Solicitor to the Board, at the expense of the Contractor. The Board does not pledge itself to accept the lowest or any Tender.—By order,
W. LOVELY, Clerk.

TEMPLE COMBE CHURCH, Somerset.—Persons willing to TENDER for the ENLARGEMENT and RESTORATION of the above-named Parish Church are invited to inspect the Drawings and Specifications at Temple Combe, on or after WEDNESDAY, the 18th INSTANT, at the Church-warden's, to whom also the Tenders are to be sent in by the 28th instant. No pledge is given to accept the lowest or any Tender.
F. C. PENROSE, Architect,
68, St. Paul's-churchyard, London, E.C.

TO BUILDERS, &c.—Notice is hereby given that PLANS and SPECIFICATIONS for RESTORING, Altering, and Enlarging the Parish Church of St. George, at Bentley, in the county of Southampton, 1 mile from Bentley Station, on the Basingstoke Railway, will be lying at Bentley Hall, from MONDAY, the 23rd, to TUESDAY, the 31st instant, both inclusive, Sunday excepted; and all persons desiring to contract for the execution of the work must send in sealed Tenders, directed to Mr. JAMES LOLTON, on or before WEDNESDAY JUNE 8th next ensuing. Neither the lowest nor any Tender will necessarily be accepted. The contractor, if required, must be prepared with two good and approved sureties, to enter into the usual legal bond for the due fulfilment of his contract.
Bentley Hall, May 7, 1864.

CROYDON LOCAL BOARD of HEALTH.—TO IRONFOUNDERS and OTHERS.—Persons desirous of contracting with the Croydon Local Board of Health for the manufacture, and delivery at the East Croydon Railway Station, of 9,000 yards of lineal and 2 yards of 9-inch IRON SOCKET PIPES and a small quantity of larger sizes, in accordance with the specification prepared by Mr. BALDWIN LATHAM, C.E. the Engineer of the Croydon Local Board, can inspect the specification and obtain forms of Tender at the above Engineer's Office, in the Town-hall Croydon, on and after TUESDAY, the 17th day of MAY. Sealed Tenders, and read "Tender for Iron Pipes," are to be delivered at the Offices of the Local Board, in the Town-hall, Croydon, on or before FOUR o'clock on TUESDAY, the 7th day of JUNE next.
11th May, 1864. HENRY RICHARDS, Clerk to the Board.

PETERBOROUGH UNION.—TO BUILDERS.—The Board of Guardians of the Peterborough Union are desirous of receiving TENDERS for the ERECTION of a CHAPEL, adjoining the Union Workhouse, at Peterborough. The Plans and Specifications may be seen, and every other particular known, on applying at Mr. HUTCHINSON'S Office, Architect, Bourne, on and after WEDNESDAY, the 18th instant, where they will remain until the 14th of JUNE next. The building to be completed within 12 calendar months from the 1st of JULY next. The Guardians do not pledge themselves to accept the lowest or any Tender, and they will require satisfactory security for the due performance of the contract. Sealed Tenders must be sent free of expense on or before FRIDAY, the 17th of JUNE next, directed to the Clerk to the Board of Guardians, Peterborough, and indorsed, "Tender for Chapel," but no Tender will be received after that day.—By order of the Board,
S. C. W. BUCKLE, Clerk to the Guardians.
Peterborough, 11th May, 1864.

TO BUILDERS.—Persons willing to submit TENDERS for the ERECTION of a SCHOOL for 100 Children, together with the necessary Offices and Teacher's Residence, at Emswell, in the county of Suffolk, are informed that the plans and specifications will be for inspection at the Fox Inn, at Emswell Heath on MONDAY, 16th inst. to SATURDAY, 21st inst. Tenders, upon forms supplied, to be forwarded by post on or before MONDAY, 30th inst. addressed to the Architect, Mr. R. J. WITHERS, 31, Bouverie street, London, W.C. and from whom further particulars may be obtained. The lowest or any Tender will not necessarily be accepted.
W. H. C. LUKE, Rector of Elmswell.
Elmswell, Suffolk, 7th May, 1864.

BUILDING MATERIALS.—The Guardians of the Poor of the Whitechapel Union are prepared to receive TENDERS for the PURCHASE of a BUILDING in Thomas-street, Mile End New Town, NEARLY the whole of the Workhouse of the Union, containing many thousands of excellent stock and other bricks, stone and other stairs and landings, tiles, lead, &c., and many useful materials. To be pulled down and taken away. May be viewed between Ten and Four daily, and Tenders must be delivered at my Office before FOUR o'clock on MONDAY, the 23rd MAY instant. Forms of Tender may be had on application at the Workhouse, no others will be noticed or received. The Guardians do not bind themselves to accept the highest or any Tender.—By order,
C. ADAMS FARE, Clerk.
Clerk's Office, White Chapel Workhouse, 11th May, 1864.

CONSERVATIVE LAND SOCIETY.—BISHOPS-STORTFORD ESTATE, HERTS.—TENDERS are invited for the CONSTRUCTION of ROADS and PIPE SEWERAGE, on the Society's Estate, at Bishop's Stortford. ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.

THE IMPROVED OPEN FIRE KITCHENER,

Manufactured by

WM. OWEN,

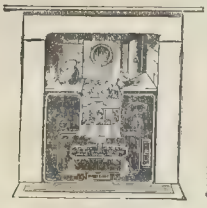
PHŒNIX IRON WORKS,

ROTHERHAM,

Possesses all the advantages of the ordinary Close Fire Kitchener, in having excellent Hot Plates on top of Ovens, for boiling, steaming, or stewing, with the additional advantage of having a thoroughly effective and deep OPEN FIRE for roasting purposes.

The Ovens are heated upon Bradley's Patent Principle (under which W. O. possesses the sole right to manufacture), and by which a great economy of fuel is effected.

These Kitcheners are made of all qualities and sizes, suitable for all classes of houses, from the cottage to the mansion; and can be OBTAINED THROUGH ANY IRONMONGER in the UNITED KINGDOM.



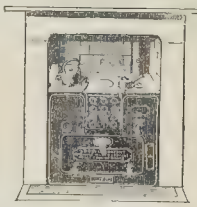
WM. OWEN,

GENERAL IRONFOUNDER, STOVE GRATE AND FENDER MANUFACTURER,

PHŒNIX WORKS, ROTHERHAM.

CUNDY'S

PATENT ECONOMIC COTTAGER'S COOKING AND IRONING STOVES.



WHEN USED OPEN.

These Engravings represent the Smallest Size Stove, viz. 24 inches long, 24 inches high, and 15 inches deep. The Oven is 18 inches long, 14 inches deep, and 11 inches high. The Boiler contains three pails of water.

This Stove, also

CUNDY'S PATENT BRICK OVEN

Double Fall-down Bar KITCHEN-RANGE, and PATENT BRICK OVEN, Semi-circle Range, also CUNDY'S Patent Original FIRE BRICK Warm Air Ventilating STOVE, suitable for CHURCHES, HALLS, SCHOOLS, and STAIRCASES, can be seen in operation daily, at the SHOW-ROOMS of the

WHEN CLOSED FOR BAKING.

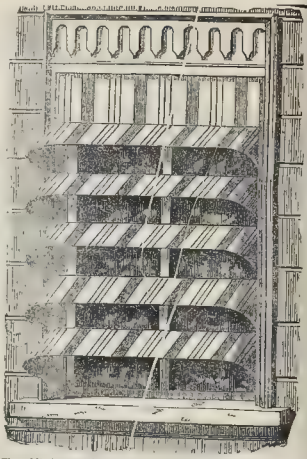
ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.



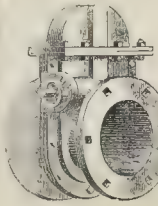
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

PATENT HELIO-SCENE SUNBLIND.



These blinds give a highly decorative finish to the front of a house, as they are fitted in frames of any design, the cases fitting into reveals of windows as other outside blind cases. The prices are the same as Spanish blinds. R. LOWTHER & Co. Manufacturers of ALL DESCRIPTIONS of SUN BLINDS. Works, South Lambeth and Vauxhall. OFFICES, 31, REGENT-STREET, LONDON. A liberal discount to the trade.

THE PRIZE MEDALS

(LONDON, 1851. PARIS, 1855. LONDON, 1862)
Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.
For progressive and general improvements in
STABLE FITTINGS AND HARNESS BRACKETS.

Awarded a prize at the Paris Exhibition,
Patronized by the English and French Governments, as well as by the principal Nobility, Gentry, and Hunting Establishments in the Kingdom.
In use at her Majesty's Stables, Aldershott and Balmoral.

COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Watertrough, and Wrought-Iron Rack, rivetted to an iron cast plate, and forming one complete and useful fixture, having COTTAM'S Patent Non-casting Hay Guard and Collar Rein attached, which is taken to the back of the manger, and works with ease and freedom up or down the glazed bar.

COTTAM'S NEW PATENT SHOD BOX, an important addition to the above fittings, being simple in construction, light, and durable, promotes cleanliness, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the above, is a most essential addition to their fittings, as it never in the way; can be placed or displaced in an instant, while its cheapness, simplicity, and utility in keeping the coats of the fragile clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT-IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE GUTTER, with perforated moveable cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction, gives a full water passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE-BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanised, and enamelled. Iron gates, fencing, hurdles, &c.

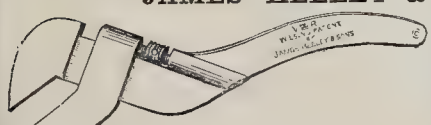
Illustrated Catalogues and Estimates gratis, upon application to
COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.
WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.
COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.
N.B.—WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES. MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first class stables in almost every county in England and MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of London Architects, noted for economy, only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to
MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.



BY HER MAJESTY'S ROYAL LETTERS PATENT.

WILSON'S DOUBLE-ACTION SCREW SPANNER,

MANUFACTURED BY

JAMES HEELEY & SONS,

Mount-street, Birmingham.

The superiority of this Spanner consists in its novel and rapid mode of adjustment by a double action screw, and its new and convenient arrangement of curved handle and oblique jaws, which, combined with its superior strength and excellent workmanship, render it by far the best and handiest tool of its class hitherto produced. It is being extensively used by Engineers, Manufacturers, Machinists, and Railway and Steamboat Companies, and can be had of all respectable Ironmongers.

NOTICE TO ARCHITECTS AND THE TRADE.
WEST-END BRANCH, EGYPTIAN HALL, PICCADILLY.

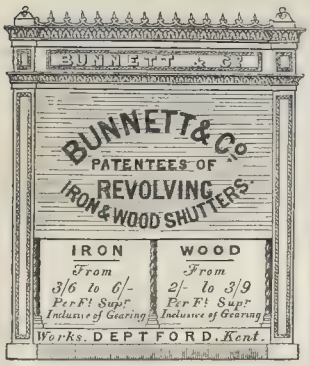
FIRE-PROOF CONSTRUCTION.—

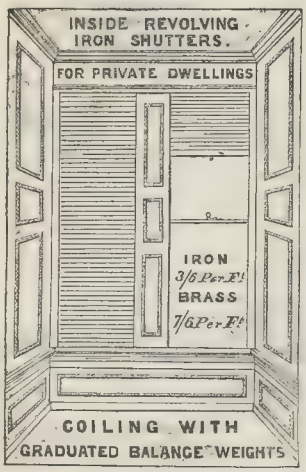
FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.



The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of ordinary flooring boards, of cement, asphalte, tiles, slate, or other material.



Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of very many.

Further information may be obtained of the Proprietor of the Patent,

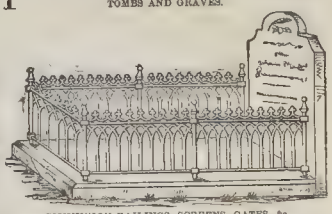
Has on hand several ENGINES and MORTAR MILLS for SALE or HIRE.

Contractor for Pumping, Sawing, Mortar Grinding, and other work where Steam Power is required.
A 30-cwt., 2-ton, and 3-ton Steam Crane ready for delivery.

THE DENNETT ARCH.



Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.
"GEO. GILBERT SCOTT, 20, Spring Gardens London."

Having made great ADDITIONS to their STOCK of PATTERNS beg to inform the trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Palisading, Window Guards, Verandahs, Stairs, Iron Railings, Lamp Irons, Gas Pillars, Castellated Sashes, Casts, Balusters, Newels, Wheels, Gratings, and Castings of every description
STOVES, RANGES, RAIN WATER GOODS, SASH-WEIGHTS, AND FURNACE WORK, &c. &c.

ROBERT MACLAREN & CO.
EGLINTON FOUNDRY, GLASGOW.
Manufacturers of all sizes of CAST-IRON MAIN PIPES, for Gas or Water, by an IMPROVED PATENT.
GENERAL IRON FOUNDERS, GAS ENGINEERS, and WROUGHT IRON TUBE MAKERS

DAY and GAS LIGHT REFLECTOR MANUFACTURER.—THOMAS FOX, 90, Hatton Garden, E.C. and 264, Thames-street, Hatton Garden, E.C. A large assortment of Silvered Glass Globes, Lamp Spires, &c., always on hand. All kinds of Bent Glass Silvered.
N.B.—The same Address to BUILDERS and the TRADE.

IRON CASTINGS, WROUGHT and CAST-IRON GIRDERS FLITCHES, and TANKS, Iron Roofing, and every description of Smith and Founders' work. Estimates given.
JAMES HAYWOOD, JUN.
PHŒNIX FOUNDRY AND ENGINEERING WORKS, DERBY.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

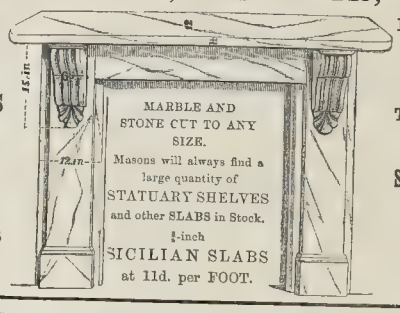
PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.



BOX STONE CHIMNEY PIECES
for 5s. 6d.
Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS
in great variety, equally low in price.

MASONS' WORK OF ALL KINDS
CONTRACTED FOR,
AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF
500 CHIMNEY PIECES
always to choose from.

PRICE LIST ON APPLICATION.

MARBLE BOX CHIMNEY PIECE
for £1 5s.
First-class Bed-room ditto, £1 10s.

FIRST-CLASS
TRUSS MARBLE CHIMNEY PIECES
from £2 5s. to £3 5s.

A WELL-CARVED
STATUARY CHIMNEY PIECE,
with 13¾-inch Piers,
suitable for a Drawing-room, which must be seen to be believed,
FOR THE SUM OF £6.
Net Prompt Cash.

PRICE LIST ON APPLICATION.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

THE LAND SECURITIES COMPANY

(Limited)
Capital, £1,000,000.
Deposit, £...

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ennis, esq. M.P. | William Dargan, esq.
Sir James Fergusson, Bart. M.P. | Henry Fitzhubert, esq.
Col. Fulke Southwell Greville, M.P. | Sir J. M. Gray
Sir John Charles Dalrymple Hay, Bart. M.P. | John Hordern Lloyd, esq.
James Mackie, esq. M.P. | Hon. W. Lindsay Napier.
Sir Laurence Peel, Bart. M.P. | Hon. Henry Petre.
Sir Henry Stracey, Bart. M.P. | Sir Charles Lilley, Bart.
| Philip Twells, esq.

OFFICES—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, East End (34, Old Broad-street, E.C.), Office of International Financial Society.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—

1st. Of landed estates, first class house property, and real property of all descriptions and tenures, and of title and interest therein.

2nd. Of rates, dues, assessments, and taxes of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private, Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title deeds; and they undertake the negotiation of special investments.

For further information, and forms of application, apply to the Company (Limited), 32 Charing-cross London, S.W.

Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32 Charing-cross London, S.W.

CALEDONIAN INSURANCE

COMPANY.
Incorporated by Royal Charter, 1805.
DECLARATION of BONUS.

The FOURTH DECLARATION of BONUS takes place in JULY next, and all Policies taken out on or before the 14th of MAY, which is the last day of the financial year, will have an additional year's Bonus added to them over those Policies taken out afterwards.

FIRE DEPARTMENT.

The Assured will receive all the advantages of the reduced duty.

JAMES MUIR, Esq. Secretary.

39, Lothbury, London, April, 1864.

THE LANDED ESTATES COMPANY

(LIMITED), is prepared to SELL FREEHOLD BUILDING PLOTS, of from One to Twenty Acres, on the Worcester Park Estate, situate on the London, Epsom, and Leatherhead Line, 2¾ miles from Waterloo Station, for the erection of first class Detached Residences only.

The Company will also grant Leases of 99 years, with the option of purchase.

The Station is on the Estate.

For Plans of the Estate, and further particulars, apply to the Secretary, at the Offices of the Company, 40, Parliament-street, S.W.

PLASTER ENRICHMENTS,

CENTRE FLOWERS, SHOP FRONT TRUSSES, VASES, ROYAL ARMS, CAPITALS,

And every description of ornament for internal and external decorations, executed in Plaster, Carton Pierre, Composition, and every kind of Cement, at reduced prices.

MESSRS. HERBERT, MODELLERS,
242, EUSTON ROAD, ST. PANCRAS.

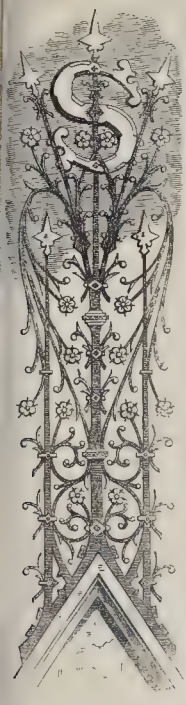
Best Gelatine, prepared, and ready for moulding 2s. per lb
Best Fine White Plaster, 2s. per cwt. Coarse ditto, 1s. 9d. per cwt.

TO INVENTORS.—All intending Patentees should procure the PRINTED INFORMATION regarding PATENTS their cost, and mode of procedure to be adopted—issued gratis by the General Patent Company (Limited), 71, Fleet-street, London.

ROBERT M. LATHAM, Secretary.

MATHEMATICAL DRAWING INSTRUMENTS, THEODOLITES, LEVELS, CIRCUMFERENTERS, SCALES, TAPES, CHAINS, T-SQUARES, RULES, &c.

JOHN ARCHBUTT & SONS,
20, WESTMINSTER BRIDGE ROAD, LAMBETH,
Near Astley's Theatre.



Respectfully inform the public that their Illustrated Price-list will be forwarded free on application. The prices will be found remarkably low. Every article warranted. Second-hand Instruments of all kinds, by the best makers, always in stock.

GOULD & PORTER (late CARY) are now manufacturing their improved 10 inch DUMPY LEVEL, best quality, complete for 9l 10s. 0d.; with silver ring compass, 10l. 10s. 0d.; 12 inch ditto, ditto, 11l. 0s. 0d. and 12l. 12s. 0d. Best 5 inch THEODOLITES, 22l. 0s. 0d. All other MATHEMATICAL INSTRUMENTS at Revised Prices.—Optical and Mathematical Instrument Makers to the Admiralty, Royal Geographical Society, Royal Military College, Sandhurst, &c. Established upwards of a century.—181, Strand, London.

The Builder.

VOL. XXII.—No. 1110.

Knole.

EVENOAKS and Knole are hard by. An hour on the London, Chatham, and Dover line, though the road is roundabout, with a short ride or a walk at the end, will take you there from London, to enjoy the quiet delights of a charming country and one of the most complete of the old Homes with which this England is sprinkled; a home full of quaint furniture and portraits of men and women whom the world knows. It is worth all the physic in all the hospitals to get away now and then into the country at this budding time. Who can resist the influence of a bright spring morning, the pure air as exhilarating as champagne and much more innocent? The blood flows, the chest expands, the spirits mount, difficulties are less thought of, troubles grow lighter, and to live is an enjoyment:—

> "Welcome every breeze and show'r;
> Sun that courts the blossom;
> Every new delicious flow'r
> Heap'd in Maia's bosom!"

The advent of spring is a perpetually recurring miracle. The blossoming of Aaron's rod once has been a marvel for ages: the annual blossoming of the earth, the periodic resurrection, is taken as a matter of course and little regarded. The present is a forward spring: the trees are in full leaf; the pear tree, as well as the cherry, has on its bridal dress of white, and the lilac, "many-plumed," is fully out and makes a glorious show.

Before going up to Knole the church may be looked at and into. A portion of it, at the west end, may be of the early part of the fourteenth century, but the main structure is later: the style Perpendicular of most prosaic kind. Amongst the monuments is one for Lawyer Lambarde, born in 1530, the earliest of county historians, and who also wrote "Eirenarchia." A book on Great Britain he put on one side because he found Camden was at work in the same direction; but it was afterwards published. He founded a school in Greenwich; and in a church in that town, now destroyed, this monument originally stood. A little bit of printing, however, preserves there the memory of his good deed. Writing is a more formidable opponent to Time than marble and stone. Geffrey Whitney, one of the Emblem writers of the sixteenth century, puts this truth quaintly:—

> "Then what may laste, which time dothe not impeache,
> Since that we see these monumentes are gone:
> Nothing at all, but time doth ouer reache,
> It eates the steele, and weares the marble stone;
> But writinges laste, though yt doe what it can,
> And are preseru'd, euen since the worlde began."

Another monument in Sevenoaks Church, one at the chancel end, gives us a grievance. The mention of it may, by chance, put things right. It records how Sir William Boswell left money for various good works, including the foundation of scholarships in one of the universities, and for apprenticing a certain number of poor boys of the town to handicrafts. The scholarships and other stipulations appear to be kept up; but inquiry forces us to believe that poor boys are not apprenticed. Admit that circumstances may have led to extra calls upon the funds, still there is no reason why the *poor* boys should bear all the loss, and we invite the parish authorities forthwith to "look to 't."

The School of Sevenoaks, founded, at the beginning of the fifteenth century, by Lord Mayor Sevenokes, who had his name from this town, where he was found when an infant, is understood to be a good one. Presently Sevenoaks will be brought even nearer to London than it is, by a new line of railway. The shafts by which a required tunnel is being formed may be seen from the well-kept gardens of the Royal Crown; whence, too, is had a good view of part of fruitful, beautiful, and story-full Kent (in British times, perhaps, the Caint or open country), including Kippington Park, now occupied by Mr. John Jay.

However, we must not longer tarry by the way, but get up to Knole; and, taking no count at present of the park, wherein we can ramble on our return, pass through the noble gate-house into the first court or quadrangle carpeted with grass: then, through an opposite archway to the second quadrangle, paved, and so into the great Hall of the house. In going through the courts, notice how the leaden rain-water heads are drawn out in length, with ornamental form, so that the pipes may come down midway between openings, or otherwise symmetrically; which would not be the case if they were placed directly under the mouth of the gutter. These courts, collegiate in character, have an air of repose which is soothing. As Tennyson sings,

> "This look of quiet flatters thus
> Our home-bred fancies."

We have no intention to describe the house or its contents: this has been done again and again. We would but gossip and incite. Let us, however, in a dozen lines, say with the guide-books that Knole was one of the many palaces belonging to the see of Canterbury, having been purchased in 1456 by Archbishop Bouchier, who rebuilt the greater part, if not the whole of the house, and left it to the see in 1486. After Cranmer, it came into the hands of King Henry VIII.; and, after changes, Queen Elizabeth, in 1603, granted the reversion of it to Thomas Sackville (the poet), afterwards Earl of Dorset, whose family have since retained possession of it, though, for a short time, in the reign of Charles II., it was alienated. The first earl formed the Hall, a handsome apartment with richly carved oak screen, now painted and varnished! The interior generally was then re-arranged and fitted up; and, from that time to this, with additions made in the next reign or two, it has remained a well-preserved specimen of a seventeenth-century house. This, with the remarkable collection of portraits it contains, including some by Vandyck and Holbein, constitutes its chief attraction. It exhibits no great architectural beauties, and the rooms are, for the most part, low and plainly fashioned; but there it stands, an untampered-with piece of past time with many associations. Things valueless at first, become priceless as time passes: as Schiller writes,—

> —— "Time consecrates;
> And what is gray with age becomes religion."

"And who," says an acute friend at our elbow, looking through the rooms, "who is forming a nineteenth-century house? Surely all that we are now doing in the way of furniture and pottery, carving and painting, though it may be in the shape of revival only, would interest those who come after?" No doubt of it; and such collections are being formed here and there, though with no view, perhaps, to the pleasure and advantage of posterity.

Sir Humphry Davy wrote of neighbouring Penshurst:—

> "Through thy deserted chambers I have walk'd,
> Musing on elder times,—cheering my mind
> By memories of the great and noble dead.
> Within thy walls the first high spirits breathed
> Who, through the darkness of the feudal times,
> Threw the bright light of letters and of arts,
> And to the warlike temper of the age
> Gave softness and the charms of social life."

This may be too lofty praise for Knole; but the latter has a long list of illustrious names connected with it, from the Earls of Pembroke, the Bigods, the Says, Protector Somerset, and Dudley Earl of Leicester, down to Tom D'Urfey, the wit, who wrote "Pills to Purge Melancholy," and lived there for some time. His portrait, and a little picture by Vanderguchtt, showing him carousing with some of the household, while the artist behind a curtain makes the sketch, records his connexion with the house. In the Dining-room, where these hang, are portraits of Dryden, Congreve, Pope, and others, who were visitors to the last earl, as well as of Reynolds, Goldsmith, Garrick (all by Reynolds himself), Handel (by Denner), Ben Jonson, Swift, Addison, and many other literary celebrities, with an interpolation of more recent time, Sir Walter Scott. Of Baron Theodore Mayerne, the eminent physician, for the destruction of whose tomb in the vaults of St. Martin's-in-the-Fields a lament was uttered in our pages, when speaking of Mytens lately, there is also a portrait. After serving Henry IV. of France Mayerne, came to be physician to King James I. of England, who made him *Sir* Theodore.

Shutting your eyes, it is not difficult amidst such associations to bring down these wits and poets from out their frames, to fill again with their forms the handsome old chairs placed against the wall, and to hear something like what their conversation in jovial hours may have been. They would stare at Sir Walter, but Dryden and some of the others would have to give thanks for his praise when they knew him. At one of the meetings here, if tradition deceive not, when Glorious John was present, the company were to try who could write the best impromptu, and the poet was named the judge. The first he read was the earl's: "I promise to pay Mr. John Dryden on demand the sum of 500*l*.,—Dorset:" and he thought it unnecessary to read the others before giving his verdict. The story has been often told; but, as serving to bring the men before us, will not be thought a vain repetition.

The Brown Gallery contains a number of historical portraits, some of them good, and some of them not; the whole, however, teaching if nothing else, contentment; since they say, with tolerably loud voice,—

> "A little rule, a little sway,
> A sun-beam in a winter day,
> Is all the proud and mighty have,
> Between the cradle and the grave."

Why, then, repine? Why, then, envy?

In this same gallery is a portrait of Ninon de l'Enclos, at the age of seventy, and looking more like twenty-five. Ninon, the Aspasia of her time, lived till ninety-one, and died in 1706. Two or three of the best heads in the gallery, by the way, hang near hers. In the Spangled Bedroom there is a well-carved ebony cabinet.

In the Leicester Gallery are several pictures, amongst others, by Mytens, of whom fresh information was given in our pages recently. His copies of some of Raffaelle's cartoons are in another part of the house. The well-dressed housekeeper calls him My-tens, as do some better authorities; but so he was not called during his life; as may be seen in all the warrants referring to him, and other documents of his time, such as the register of St. Martin's-in-

the-Fields, wherein the name is invariably spelt, from the sound, Myttens or Mittens.*

By the side of the fire-dogs in the Cartoon Gallery, by the way, are two small figures of Asiatics, carved in wood, and with the drapery from below the waist painted like life,—carved so vigorously and painted so harmoniously that they leave a vivid impression on the mental retina.

The chapel is poor; in the ante-room there is a good ancient carving of the Crucifixion, including a number of small figures: the expression in many of them is excellent. This group is further interesting from having belonged to Mary Queen of Scots. In the Crimson Drawing-room, with some other very good pictures, hang the Ugolino, an Infant Samuel, the Robinetta, and the portrait of Madame Schindlerin, all by Reynolds.

The King's Bed-room, so called from having been fitted up for James I. (notice the remarkable picture of this weakly king in another apartment), has a bed that cost 8,000*l.* at that time, and was once handsome. The hangings of gold and silver tissue, lined with satin, have now, however, lost all their beauty. Handsome beds and hangings were used in England as early as the fourteenth century, if not before. Allusions to them are often found in the romances of the period. Thus, in Syr Bevys, of Hamptoun, mention is made of—

> —— "Beddes of silke echon,
> Quiltes of gold thar upon."†

And so in "The Squire of Low Degree,"—

> "Your head shete shall be of pery pyght
> With dymondes set and rubyes bryght.
> When you are layd in bed so softe,
> A cage of golde shal hange aloffe."

The large picture in the King's Chamber is by Janssens, and represents Gaspard de Coligny, the noted Huguenot admiral (who was slain during the massacre of St. Bartholomew, 1572), and his brothers. Two days before the massacre he had been shot at by the instigation of the Duchesse de Nemours, but was missed. The silver ornaments with which this chamber, as well as some of the other apartments, is adorned, are ineffective. There are several pairs of andirons or fire-dogs (called in old inventories aundhyryns, andirnes, and hawnd-iryns), in various parts of the house worth notice, especially those in the hall, which were brought from Hever Castle, and are marked with the initials of King Henry VIII. and Anne Boleyn. The antique statue in the hall, by the way, called Demosthenes, is fine both in pose and in respect of the drapery.

Before we again pass out into the park, let us offer praise justly due to the present possessor of Knole for the care that is given to the preservation of the pictures, and the way in which the house and its interesting contents are surrendered during several days in the week for the enjoyment of visitors.

The park is nearly six miles round, and contains some noble trees; while its undulating surface shows sheets of vivid green, spotted with clumps of foliage, with troops of deer (notice the white ones), passing noiselessly across the glades and in amongst the trees. It was a good-natured old lady who came back on her road, thinking we were strangers, to point out to us where the shell of a mighty oak, called "old" two centuries ago, would be found, and where stood the noted beech-tree,—truly, a glorious growth, and nearly 30 feet in diameter. We shall have carried on the obligation if by this note we lead any of our readers to search out for themselves these monarchs of Knole Park.

* See p. 309, *ante*.
† Quoted in Parker's "Domestic Architecture."

THE DESIGNS FOR PROPOSED MUSEUMS, SOUTH KENSINGTON.

IN order that certain grounds of objection by some of the authors of designs, in the matter of the award of premiums in the competition for the proposed buildings at South Kensington, as well as our description of the drawings, may be understood, we preface the present notice with a statement of particular conditions amongst those issued by the Office of Works, that were not completely given in our first article.*

The designs required, were stated, first, as to be "for public buildings to be erected on the land," "used in 1862 for the International Exhibition" (excluding the ground occupied by the Annexes), shown by a plan whereon the site to be treated was coloured red; but, second, that which was wanted was particularized thus:—"The buildings for which a design is required are to be placed on the eastern portion of the site coloured red," &c.; whilst, afterwards, it was mentioned, that in designing the buildings for the particular accommodation of the Natural History collections, and the models belonging to the Commissioners of Patents, architects were to have reference not only to "future extension" for these purposes, but "to the ultimate appropriation of the whole site" for museums for "exhibition of various objects of art and science," and were "to show upon the annexed plan" (that before referred to), "the manner in which they would propose to lay out the whole site in such buildings." In a following paragraph, "the eastern side of the site coloured red" was again named, in connexion with the scale for the principal drawings and the scale for one elevation, and with "one perspective view tinted with light-brown Indian ink;" and in another paragraph, each competitor was required to "submit designs for the two museums, and a block plan embracing the whole site," &c. It has followed from these instructions, that some of the competitors have kept their museums as much as possible eastward of the central line of division between the eastern and western halves of the entire ground, and that many others have considered themselves at least restricted from trespassing at all upon the western half of the ground, with any portion of the Natural History Museum, or Patent Museum, and their adjuncts. All such competitors would consider those designs which treat, primarily and comprehensively, the whole site, and even those which in any degree pass the central line in providing the accommodation, as exceeding the fair limits of the conditions.†

In the following particulars of designs, as in the descriptions we have already given, where we speak of *the general plan*, we refer in each case to the competitor's arrangement of the ground east and west; that is, the whole area between Exhibition-road and Prince Albert's-road, and bounded on the south by Cromwell-road.

The design marked "Pro Rege et Lege," which has received the third premium, and is by Mr. Cuthbert Brodrick, has the general plan with each line of frontage set back considerably, excepting in the case of the theatre, which is at the north-east angle of the ground, and comes close up to Exhibition-road. The Cromwell-road front consists of a recessed centre and two wings. The eastern wing, of which the principal front is in Exhibition-road, is appropriated to the Natural History Museum. In the centre of the general plan is a rotunda, 180 feet in diameter, having an ambulatory round, and proposed to be appropriated to the Patent Museum. Therefore if the design that has received the first premium errs against the conditions as they are viewed by some of the competitors, in placing its theatre and its only adequate entrance-hall, centrally, or half in the western portion of the ground, the design now under notice must be considered to err similarly by the position taken for its Patent Museum. But it errs otherwise as to the circular hall. This rotunda of 180 feet diameter, is covered with a dome which is a mere shell in thickness, is very low, and therefore would have great thrust, and is pierced (judging from the section), with some hundreds of openings. The drawing is wanting in accuracy in all that relates to the openings; evidently, contrivance of the dome with reference to practicability could have formed no part of the competitor's labours. In the design that has received the first premium, indeed, it is not easy to understand that the abutment to the dome is sufficient, or how the lantern is carried, or what is represented by certain lines in the section: moreover, the lighting, about the rotunda below the dome, seems to be all by "borrowed light." As to the design that is mere immediately before us, the wing or building on the eastern portion of the ground, appropriated to the Natural History Museum, is divided by a wide central corridor into two large areas. Each one of these is again divided into square spaces, nine of which in the centre, have each a circular lantern or domical light carried by arches and pendentives rising from slender piers. The division or bay next the external walls on three sides, forms part of a corridor; and at each angle of the building, the plan includes an octagonal, chamber or "tribune," in a square pavilion. Externally, all the pavilions are richly decorated, and have attics with caryatides. The centre of the eastern front, and the centre of the recess facing the Cromwell-road, project; and the projection is flanked by pavilions, so as to give somewhat the effect as in the new French Opera House, whilst between them is a peculiar form of pediment with enriched mouldings. The general design is a compound of Florentine Italian and modern French. There is some good rustication in the lower story; where the windows are arch-headed, and there are festoons. In the story above, columns are used. There is considerable merit about the decorative features of the design: though many of them are more or less directly copied from models. The theatre much resembles one of Mons. Hittorff's circuses.

The design with the motto "Dieu et Mon Droit" is a very clever one decoratively regarded, in spite of a resemblance to Schinkel's Theatre at Berlin, and to some other buildings in the same city. The general plan is comprised mainly of two square blocks, forming wings in the Cromwell-road front, and a recessed centre. In this front, the end blocks appear each with a portico of six columns, over which is a great attic, with pediment; whilst a vast hall in the centre, has for its principal feature, a portico of eight columns. This hall is joined to the wings east and west, by a covered way; and at each of the two points of junction rises a lofty dome. Looking at the quadrangular block which is in the eastern portion of the ground; if the area be divided into nine squares; if the central square be given to the theatre, and the other squares be supposed each lighted by a central court, covered with glass, that will explain the general principle of the planning of the museums. We do not see that certain parts of the building would be adequately lighted from the courts, since there are no top lights. The general decorative features, besides the porticoes of Corinthian columns, are pilasters, angles formed by a double breadth of shaft and capital-decoration, a frieze with the names of eminent naturalists, a balustrade with pedestals carrying some form of ornament, a podium, and interpilasters filled in with an arrangement of mouldings separating the two stories, and with a window in each story, composed of two lights with a central shaft or anta. The general decorative treatment, and some of the details in the elevations, are excellent.

In the design marked "Mæcenas," the general plan shows a road 120 feet wide, across the ground, to afford a southern entrance to the Horticultural Gardens. But any advantage to be derived from the access, would be reduced, as the plan is, by the arrangement of the screen at the entrance from Cromwell-road, where the archways are insufficient. The lecture-hall is placed at the north-east corner of the ground, as in many other designs, and rightly so, in order that it may be used with or without the museums or library. In arranging the museums, the author claims to have kept in view the two important ends,—economy of space; and sufficiency of light. As he says, to meet these requirements, top-lighting is employed generally in his design; and he submits that this method is the best for the purposes of a museum. Our previous articles will show that we should be far from admitting any such view. He has endeavoured to provide an area of light-transmitting medium, or surface, as nearly as possible equal to the area of the museums, saying that the alterative would oblige resort to "wells;" which he thinks are to be avoided, by reason of the damp or lack of fresh air which are to some degree "accompaniments of confined quadrangles of whatever area." According to these views, he arranges a building filling nearly the entire eastern half of the ground, as two large covered areas, each 365 feet by 155 feet, and having a lantern in the centre, of 70 feet span, carried with the roof, by iron columns. A gallery on the first floor, surrounds

* See p. 289, *ante*. See also pp. 305 and 303.
† We are asked to mention that the perspective drawing alone of the 1st premiated design was coloured by the gentleman named in our last. The others were coloured by Captain Fowke's assistants.

he lantern-lighted central space. In principle, his is the original Crystal Palace arrangement; and he omits to consider not merely the superior advantage of side-lighting, but facilities of ventilation which are to be set against the disadvantages that he perceives in open courts. As to all these Crystal Palace arrangements of plan, the use of iron columns either as rain-water pipes, or as supports in a building intended to be fire-proof in accordance with the conditions, should not be for a moment thought of. Lastly, all the forms of the bazaar, or Manchester warehouse, are quite opposed to the requirements of those who go to study a collection; as they are opposed, we have reason to believe, to the views of the officers of the British Museum, who would prefer small galleries, or least of all, arrangements adopted in so many of the designs under the influence of Great Exhibition buildings. Decoratively regarded, the design marked "Mæcenas," has details of ornamentation which are not in bad taste. The general character is Renaissance Italian. Much of the enrichment is introduced in chamfers to windows, and on the lower portion of shafts of columns; but the best ornamentation is that of the lights of the windows, where the glazing is strengthened by standards of metal-work. The author's misconception of requirements in planning, however, is shown by the manner in which he would side-light his Patent Museum. This portion of the plan ranges along the Cromwell-road; and there are windows in front only; though the light would have to travel 50 feet. The contrasted merits and defects that are to be met with in the same sets of drawings in this collection, give a curious presentation of the state of education in our profession, a state which representative bodies are even yet but little alive to.

The design marked "Bramante," we thought fit to name in our first article, but not because it deserved precisely the notice which it has since received. The author seriously proposes to build, over the whole of the vast area of his general plan, a costly substructure of rusticated masonry, rising some eight or ten feet above the ground line, and of which the advantage may be estimated when we say that, excepting one or two places, windows are avoided in it. Its intended office is to impart effect to the more enriched portion of the building to be set upon it. In this, the author has *chosen* (we wish architects could be persuaded not to *choose*) the style of the Early Renaissance "because of its ready adaptability to the wants of modern civilization, and because of its capacity to incorporate or ally itself with the excellences and peculiarities of both the Gothic and the severe Classic styles." In the Cromwell-road front he proposes a curve inwards in the centre, in the form of a large flat segment. Internally, the arrangement of the museums includes roofing in wide and narrow spans, and the use of iron columns.

The design marked "Consilio et Labore" attracts some attention from the French appearance, both of the drawings and the design. The merit of the design however is not very great. The details and many features of the decoration are taken from the well-known Bibliothèque de Ste. Geneviève, by the Pantheon, Paris, and from the Palais de l'Industrie. In the general plan, the system of large open courts is adopted; and the buildings of the museum have the merit of being all side-lighted.

In the design with the motto "In Domino Confido," near to this last, the general plan seems to provide a way to the gardens, as in a design already mentioned. The eastern frontage is divided between the Patent Museum to the north, and the Natural History Museum which occupies the south-eastern portion of the whole site. The main features of this latter museum, are two oblong divisions, each with central glass-covered well-hole, and the two connected by corridors at the north and south, the whole enclosing a quadrangular space wherein would be the block containing the theatre and entrance. The upper galleries are both top-lighted and side-lighted; and their decorative features internally, include iron columns carrying arches, the spandrels of which would be ornamented with busts in circles. The chief features in the exterior are salient columns coupled, and roofs of high pitch.

In the design marked "Theta," the space between the two-storied blocks of the museum-galleries, is roofed over to get a ground-floor gallery, as in several other designs, but thus sacrificing the basement. Pavilion-masses at the centre and angles, columns superimposed, (and in the centre coupled, as well as in a portico,) are the decorative features.

There are some designs which are very peculiar decoratively, and in their arrangements for lighting, yet to be noticed. One with the motto, "One more Attempt at Design out of the beaten Track,"—and the features of which remind us of the plates in a work by a Liverpool architect, wherein endeavour is made to grasp the idea of a new style,—has the museum arranged mainly as two parallel buildings, each of which has the plan and section of clerestory-lighted nave, aisles, and lofty triforium-gallery. Each bay presents seven windows in the clerestory, and three arches in the triforium and aisle respectively; and the same character is repeated externally in the Cromwell-road front, the feature of the centre only of that line, being a loggia of five arches, and each wing having a bold arch as its central feature. In the eastern front, the ends of the two museum buildings appear, with the clerestory setting back in each case, and the buildings separated by a loggia of three arches. To the north, the Patent Museum is terminated by a lofty tower. In general arrangement of masses, and as to some of the details, there is much skill evinced in this design: though there are details, as those of the crowning balustrade, which are new rather than studied. At the opposite end of the Royal Gallery, there are two designs, one marked "Delta," and the other "Josephus," which adopt for the museums, modifications of the nave-and-aisles arrangement. They are difficult to describe in words; but the first of the designs has each block of the museum arranged in two stories, whereof each story has a central nave, and side galleries cutting across the windows; the galleries in the top story being lighted from the ceiling. Of course, all such arrangements, like that of the Crystal Palace system, are open to an objection before referred to. In the design marked "Josephus," there are two stories in the central division; or there may be said to be a gallery over the clerestory-lighted nave; whilst in the lower portion of the section, a top-lighted triforum appears with its outer walls set-in, so as to leave space for lights to chambers which are in the position of aisles. Externally, the set-off or set-in space where the lights occur, is divided by buttresses formed as *chimeræ*. The decorative character of these two last-mentioned designs is the same, a mixture of Florentine with Venetian-Italian, and Gothic, having some good features, but strangely at variance with any manner of building in our day.

Near to these productions is a design marked "Spectemur Agendo," wherein the museums are arranged partly with the long narrow courts and partly with large quadrangles. It has some good decorative features in arched principals, and the coffer-lights of ceilings; and in details of the exterior, which are of Romanesque or Renaissance character, where coloured marbles are introduced. Some of the internal decorative features resemble those of the shafts and arches of metal-work in the courts of the South Kensington Museum.

The design marked "Deo Gratias," has the general plan with a centre recessed with quadrants, whereof each is completed to a circle having its separate roof. One rotunda would be the "theatre," of which the galleries and roof would be supported by iron columns. The effect of this design as in the perspective view, is better than would be supposed from the details. These are of Italian character. "Regardez" has a general plan having a recessed centre and large courts; but the Natural History Museum is arranged with iron columns carrying the roofing in alternate wide and narrow spans. The light is admitted through double glazing in the roof. The design attracts some attention from the perspective drawing of the exterior, which is cleverly tinted in sepia, and emphasizes some of the masses and details effectively. The general character is Italian. The angle-pavilions are terminated by lanterns; whilst the centre-pavilion has angle-turrets and a loggia in the first-floor. In the upper story, the general character is given by coupled columns, and plain walling in place of windows. A certain blankness in a story thus treated, seems to have been perceived by the colourist of the view; for, he has indicated pictorial decoration on the wall-surface between the columns. "Lux" is an Italian design, with curved roofs; and it adopts the system of large areas with top-lighting, in the case of the museums. "Fides" is distinguishable chiefly as of red brick, with a portico in stone. "Theta Gamma" is remarkable in the general plan, for an open circular court, surrounded by a peristyle reached by four covered ways, to be appropriated for sculpture and called "Temple of Fame." The general requirements of the building seem to have been carefully studied; but the decorative features, which are Italian, are not very good. A design marked "Y. Z. &," is Italian with an immense square domical roof as the central feature. There are hints to be got from the details of degenerate Italian character of the design marked "A. Z.;" though such forms ought not to be copied. A lofty tower in the centre of the front is a main element in the design. The drawing is not good. "Mon Droit" has one commendable feature of plan in the central corridor with the galleries opening out, right and left; but the basement would be sacrificed, as in other cases, by appropriation of the space between the two-storied divisions, to the divisions of one story in height between them; whilst the rusticated podium is liable to the objection brought against the basement in another design, and from which the design that has received the first premium is not free, that the omission of windows makes use of the substructure or basement out of proportion with cost. The decorative character of "Mon Droit" is given by pavilions with roofs of high pitch, ordinary arch-headed windows in the upper story, and pointed-arch-headed windows and narrow rusticated piers in the lower story.

We have spoken of two or three designs as Gothic in some of their decorative features. There are two other designs which are markedly Gothic. One labelled "Nature and Art," has arches and cusping such as were in vogue half a century ago. The other, "Amor Patriæ," is noticeable for the manner in which its masses and high-pitched roofs are piled up, and for its sculpture introduced in the horizontal space between the windows of the ground-floor and upper story. The buttresses at the entrance, also, are terminated by carved representations of animals, some of them very prominent by dimensions.

Two designs, of unequal merit, in the collection, are of Greek character. One of them, with the motto, "'Tis well to begin well: 'tis better to end well," has the general plan formed of two large blocks of building separated by a deeply-recessed centre, having a portico of eight columns at the end. Each wing in the Cromwell-road front has three peculiar features in the upper story, which may be described as tetrastyle porticoes with the intercolumns filled up. They are certainly not elegant: the whole upper story, without windows, has more than the usual blank look of the method of treatment; and the ground story must be badly lighted by the small windows that are shown. The other design, marked "Athenian," has great merit of grouping in the masses, which include Doric temple-formed structures raised aloft, each main portico carried on a substructure having one long opening filled in with dwarf shafts of Indian character, and a larger opening filled in with Telamones or elephants. The portico is reached by side flights of steps. To the main block of the temple-formed structure, another block transeptwise is attached. The principal portion of the building devoted to the museums, has for its external features, plain openings between antæ or pilasters in the upper floor, and low windows, with Greek doorways at certain distances, in the ground story. A square tower rusticated in horizontal lines, and having marked *entasis*, and terminated by a lantern and balcony, is placed at the north-eastern corner of the ground. There is fine effect in this design; though it had no chance of selection.

The design marked "Aspiration," the author of which, not generally known as an architect, discloses his identity where he speaks of the stone that he would recommend, is of classical character; and its towering masses at angles and centres, and a large dome in the middle of the plan, give the building a grandeur of outline which is only too far removed from realization. In adopting the character described, the author has been governed by the fact of the area, more extensive than that of any building that can be readily called to mind as within the precincts of a town: but, in common with many other competitors, he has not remembered the disadvantages of a site so closely shut in. These would render unattainable the effects here shown, or such as belong to a perspective view supposed taken from the usual distance. The rotunda below the dome, is the main feature of the plan,

having sixteen openings and lines branching from it.

The design marked "Atom," has a dome 256 feet in diameter, and is mainly remarkable for having been mentioned in the House of Commons as evidence of asserted extravagant character of the designs generally. The mention of such a design as specimen of the works in the competition, is evidence of what is the fact, namely, that very little real attention has been given to the exhibition by members of the legislature; and had not our description extended to extreme length, we could say much respecting the evidence which is added to that which we previously had, but which the profession seem to be unmindful of, touching the habitual manner of looking at architectural designs.

We are authorized to state that the competitors who are willing that their names should be affixed to their designs, exhibited anonymously in the Royal Gallery, at the Palace at Westminster, should communicate with the Secretary of the Office of Works, 12, Whitehall-place, London, S.W.

THE ROYAL ACADEMY EXHIBITION.*

In all probability, if matters proceed as they lately have proceeded, style, as indicative of the painter, will become extinct in one comprehensive system of representation. Even in our picture-books of the present day one has to seek for the recognition of an illustration beyond any information individuality would afford, since the orthography of the respective pencils defies distinction, everybody being so like every one else, more especially those who, imitating all that they can imitate—namely, the bad points of the best of them at their worst,—produce a curious anomaly of monotonous confusion.

No two styles could, perhaps, afford a stronger contrast than the all-sufficient one of Sir Edwin Landseer, implying so much more than it asserts, and the purely assertive one of Mr. J. F. Lewis, equally inimitable in the absence of any proof to the contrary hitherto. To those who consider the perfection of finish the one thing necessary in a picture, what a triumph this marvellous transcript of positive fact must be. (110) "The Hôsh, or Courtyard of the House of the Coptic Patriarch at Cairo," introducing as immediate incident the patriarch dictating despatches, for which Arab messengers are waiting to convey them—as is intimated by the catalogue's description—to a convent in the desert. It would appear impossible to exceed the close imitation of reality in this without meeting the extreme; for, curiously enough, its excessiveness already suggests incompleteness; and everything represented as supposed to be alive is killed by it: the pigeons and ducks hang suspended and inanimate under its cruel dominion; when, on the other hand, the walls, tesselated pavement, and all such objects are nearly alive in their expressiveness and exquisite finish, and seem to be the only things that can breathe in such utter want of air and space. As—

> "A jest's prosperity lies in the ear
> Of him that hears it,"

may not the Shakspearian aphorism be transposed to another sense, and a picture's success depend entirely upon party judgment, irrespective of general opinion, and not so much upon the maker's effort to secure it? Looking with astonishment at Mr. J. F. Lewis's wonderful performance of minute elaboration, it is impossible to divest oneself of a certain respectful awe similar to that entertained for devotees to barbarous religions and their horrible ordinances, with whom new shirts were no luxury and flagellation frequent; and ask if this photographic fidelity to exact imitation is the true faith after all, or but an illusive one indeed!

However it may be, such sincerity in its worshipper entitles him to the highest consideration, and even those most inclined to question it must deferentially bow in admiration of its very intensity.

How refreshing it is after this to look at the green dewy grass in Mr. Hook's equally real landscape (105), "The Broom Dasher." He is another who relies upon realism,—upon judgment in selection rather than imagination,—for provision to expound upon; and though he has nothing on the present occasion that will compare with many of his more notable works of preceding years, his skill always agreeably educes the full value of the lessons constant intercourse with nature teaches him; and whatever he does proves how valuable a classic art-education is, even in the simplest application of it. (146) "From under the Sea," is the most striking of his contributions; but though he has selected fresh ground for observation, or rather gone under it, for the purpose of change, he has got on to no new track in his tramway picture, for we have the same utopian fond parents of the same freckled fair-headed bairns, as demonstrative of a most delightful appreciation of domestic happiness in Cornwall, as in former blest localities, somewhat precocious, but always most pleasing. There is more poetry in (445) "Cornish Miners leaving Work."

If recollection be worthy of any credit at all, why did Mr. Goodall, R.A., desert for desert sake his pearly complexioned Irish beauties and piquante Brittany peasants? With such a made and matured power of impressing them as he now may boast of, what a fund of result might be expected from his old happy method of investing historiettes of village life and interests with motive realization and artistic value in their depiction. His large and thoroughly well painted study of Eastern circumstance (397), "The Messenger from Sinai at the Wells of Moses," can evoke no compensating return for the amount of labour and knowledge so evidently bestowed upon it. Too much a matter-of-fact representation to be prized for historical associations,—as it has no pretensions for assuming any particular incident of Biblical narration,—the interest attached to its locality is destroyed by its subservience as merely a background for commonplace reality. The highest praise that can be awarded it is, that it might have been painted by Horace Vernet, if the solidity of its execution did not at once refute the supposition. (294) "The Song of the Nubian Slave" is most admirable for character. This is Mr. Goodall's diploma work, deposited in the Academy on his election as Academician, and rather an unusually strong attestation of acknowledgment. Mr. P. H. Calderon has been unfortunate, too, in the choice of subject-matter. It must be an affected taste or idiosyncrasy that could prefer so lugubrious a picture as the "Burial of John Hampden" (204), conspicuous as it is for many superlative qualities, to the far more attractive performance of this artist last season. The theme is unpromising enough in the hands of most consummate ability to contend with it; and since Mr. Calderon has failed to make anything of it beyond a most impressively oppressive exhibition of his rare manipulative attainments, and exquisite feeling for appropriate effect, it may deter others from similar attempts. The throng of Puritan soldiers in their sombre costume, although most cleverly diversified by individual portraiture, might surely have been further relieved of some of the heaviness and repetition that fatigues the spectator without commensurate advantage in assisting the painter to tell his story; and surely there would have been excuse for the introduction of female figures, considering how endeared the Garibaldi of that period was to the families of his supporters and dependents, and how enthusiastic so many fair Puritans were in the cause for which he fell. Another contribution by the same, more lucidly illustrative of his *forte* (264) "In the Cloisters at Arles," presents a pair of buxom washerwomen, very brilliantly coloured.

It is much to be regretted that a speciality such as belongs to Mr. Armitage and Mr. Watts in common should for want of opportunity remain almost dormant. From their introduction to public notice, they have loyally adhered to a predilection for monumental art; and, in spite of little encouragement beyond general acknowledgment of their aptitude, have so persisted in practising it as far as possible, even to the exclusion of a more profitable adaptation of their capabilities, that it amounts almost to a reproach to deny such a chance of development, where so much promise subsists, whenever it may be practicable to call them into requisition. (15) "Ahab and Jezebel," by Mr. Armitage, fully sustains this promise of ability on his part. The two impersonations are admirably expressive of the text descriptive of Ahab's greed and Jezebel's intention to satisfy it at the price of murder. The breadth of its treatment and simple arrangement of composition are singularly characteristic of this artist, who always depends more upon his Academic knowledge than artificial accessories, although such ornament as he does introduce is always well studied and appropriate. Perhaps to its surroundings may be attributed some of its want of force in colour, which appears to be detrimental in proximity to more elaborated and glowing exercise of it; but it claims a position for itself quite independent of its size.

Mr. Watts is less fortunate than usual in (437) "Time and Oblivion,"—a design to be executed in divers materials after the manner of Phidias; but he has already established himself as a master of all necessary requirements for mural decoration. In (395) "Choosing," a beautifully-painted head, the grace and power which distinguish it sufficiently proclaim the same author.

* See p. 325, *ante*.

THE LOCOMOTIVE BOILER EXPLOSION AT BISHOP'S ROAD STATION.

LAST Monday morning the echoes of the Underground Railway reverberated to a boiler explosion. The boiler of engine No. 138, —one of the locomotives supplied day by day by the Great Northern Railway administration to that of the Metropolitan,—exploded with apparently two loud reports. The Metropolitan Railway Company, in consequence of some delay in the delivery of the eighteen engines ordered in Manchester for the traffic of the line, has at present no engines under its direct control, but they are hired, together with the *personnel*, from the Great Northern Railway Company. This particular engine was built by a well-known Newcastle firm. It is six-wheeled coupled; the wheels, originally 5 feet in diameter, are now turned down to 4 feet 11 inches; the distance between the centres being 7 feet 6 inches. The cylinders are now 16½ inches, and with a 22 inch stroke. The inside length of firebox is 4 feet, its breadth 5 feet 5 inches, and its depth from top of bars, 4 feet 6 inches. The copper exhaust-pipe is 4½ inches outside, and the boiler is 9 feet 9 inches long, with a thickness of plate of 7-16ths of an inch. The plate-iron steam dome is 2 feet 1½ inch in diameter inside, and it was placed on the centre plate between the smokebox and the firebox. This ordinary goods engine, worked for several years on the Great Northern, had been adapted to the requirements of underground traffic by fitting it with an arrangement for conveying the steam back into the tender, and by placing a damper in the smokebox.

The engine had just come into the station, and was ready to start with the 9·15 train. It appears that the driver cannot say to a certainty whether he had or had not opened the regulator-valve and let on the steam. He had, however, opened the whistle, which had been heard to blow; and it is to be presumed, as most engine-drivers are in the habit of opening the regulator and the whistle simultaneously, that the steam had been, at any rate partly, let on. The pressure-gauge only showed 110 lb.; and at a previous hour of the same day, the dial pointed to 120 lb.; while the gauge has been since tested, and found to be correct. About two-thirds of the top portion of, firstly, the plates of that portion of the barrel next the firebox, and, secondly, about two-thirds of the top portion of the abutting plates on which was riveted the steam-dome, were torn into shreds like brown paper, and separated from the barrel; while the plate-iron dome, probably weighing from 6 to 8 cwt., was thrown high into the air. The present appearance of the tubes is very interesting and peculiar. They are all bent in the middle, or under the former situation of the dome; and with a camber of from 6 to 8 inches,—that is to say, if a straight line were drawn from the centre of each hole in the tube plates, the distance between that line and the present centre line of curvature of each tube would be from 6 to 8 inches. It is remarkable how symmetrical have been the results of this action on the tubes. Standing on the top of the firebox, and on the centre line of the engine, the eye of the spectator will see a perfectly symmetrical distortion of the tubes towards each side of the engine, the highest curvature being coincident with a line drawn at right angles to the longitudinal centre line of the engine, and coincident with the cross centre line of the former position of the dome. It is evident that the explosion first took place here. The copper steam tube, of course placed along the longitudinal centre line of the engine, is completely bent and doubled back on the top of the plate adjoining the smokebox. Two or three of the brass flue tubes are also doubled back in the same way. They are swung back just as one might fancy a

bell-rope to be flung back by a jerk. The brass tubes present the appearance of a bundle of canes, each end of which bundle of fasces, after being tied together, had then been submitted to a bending force, end on. The enormous and, above all, *instantaneous* force, may be conceived when we observe that none of the tubes seem to have been much disturbed in their ferule holes. The engine was not in the least disturbed on the rails, and was left in its original position just previously to the explosion. This is a proof, if any were wanting, that the explosion acted vertically upwards. The reaction, or rocket-like action, due to the sudden exit of the steam and water, thus pressed the engine firmly down upon the line, and actually prevented its moving, while, at the same time, it broke the top plates of the springs.

A tolerably sound and sure way to get at the origin of the explosion would have been, as soon as possible after its occurrence, to have cleared the fragments of the plates from any dirt and mud, and to have set them up, near and parallel to the boiler, as far as possible in positions similar to their original positions. Thus, before any oxidation had set in, it would have been possible to judge from the appearance of the fracture whether there was any old spot; and the parallelism of position would have aided the judgment in forming a decision as to the originating cause. The weak place certainly seems to have been the dome seating. This is pretty clear, not merely from the upper direction taken by the explosion, but also from a look at the dome itself. The riveting seems to have required a terrible amount of drifting before the holes in the boiler and those in the seating would coincide, and some of the rivets are indeed inclined in opposite directions to each other. There is a suspicious-looking crack in the plate still adhering to the seating. The diameter of the dome is also rather above the usual average, as it is 2 feet 1¼ inch inside. The plates are not worn much more than one-eighth, which slight wear would not of itself by any means account for the affair; but anything of this kind in the neighbourhood of the dome-seating would have furthered the effects of any initial weakness. The fracture probably first occurred at or near the seating, and, of course, above the water-line. The superincumbent pressure was thereby released from the top of the water, which thus surged up instantaneously, and with a sudden load, on the dome and plates. The plates were completely torn from the dome, which was then thrown up, and the water, in its passage from all sides of the boiler towards the outlet, encountered the tubes, which were thus bent. The plates first felt the full force of the exploding water. All the appearances, indeed, very well bear out the very rational explanation of boiler explosions published a few years ago by Mr. Z. Colburn. The last word, however, has not been said on all the phenomena attendant on these occurrences.

It is a noticeable fact that an explosion, which seems to have begun at the dome seating, also took place last Thursday week on a locomotive boiler belonging to the Midland Railway. In this case the driver's brains appear to have been blown out by the impelled water, thus producing the same effect as water when it is discharged from a gun. The verdict returned by the jury was that the explosion arose from a "scarcity of water." Perhaps there was a "scarcity" of something rather rarer than water, and there is probably, also, such a thing as "drifting" into a boiler explosion, as well as into a European war.

NOTES OF THE PAST AND PRESENT PRACTICE OF MEASURING MASON WORK.*

THE attention which, at the present time, is being bestowed on the subject of this evening's paper by kindred and allied societies in England, the movement now in progress in Edinburgh for a revision of the mode of measuring masonwork, and the bearing which the subject has on the interests of several classes represented in this society, invest it with a degree of importance which may excuse, while it is to be feared it will not obviate, its dryness.

To trace the history of any of the arrangements for adjusting and settling the transactions relating to the industry or to the commerce of a nation would reveal much curious and instructive information.

How the weights and measures now in use, the systems of calculation, and the modes of valuing have been formed—by what steps they have proceeded to their existing state—how, and to what extent they have been affected by the idiosyncrasy of the people—by the habits of the times—by the degrees of intelligence which those who used them possessed—by their standards of integrity—by the nature of the material employed—by the modes in which these materials were sold to the craftsmen—by the arrangements with operatives—and, with regard to the works of artificers engaged in building, in addition to these questions, how the modes of measuring have been influenced by the changes in the methods of building, and by the various styles of architecture, are among the topics which naturally suggest themselves by the subject now to be considered.

The aim of this paper is not so ambitious as to attempt to elucidate these questions, some of which might be suitable for the consideration of our brethren, the archæologists; its object is simply to glance at the things of the past, and by connecting them with those of the present, to endeavour, however feebly, to excite attention, with the hope that existing evils may be removed in the future.

The keeps and fortresses, the castles and palaces, and the magnificent ecclesiastical buildings of the Middle Ages, all attest the advanced state of the mason-work of the period; but the existence of the feudal system, then in full vigour, with its villenage, its requirements of personal services, and its other accessories, prevented the necessity of any measuring for the purpose of valuation in the erection of these edifices; while in the towns the dwellings were generally composed of materials so fragile, and so rudely formed, that skilled artisans were not required in their erection.

It was not until the thirteenth century when, the extent and influence of the burghs having greatly increased, transactions relating to the erection of buildings were needed. It has been the work of the intervening centuries to bring these transactions to their present state. It is difficult to speak with precision regarding the subject prior to the fourteenth century,—and subsequent to that period, while the records of burghs are crowded with absurd enactments relating to the strength of ale, the price of candles, and of aqua vitæ, &c., the references to building operations are few and far between.

One method of executing masonwork 500 years ago was to hire workmen for longer or shorter periods at rates of wages fixed by mutual agreement; and it may be remarked that the workmen were engaged at different rates. The idea that the labour of all operatives in a trade is of equal value appears to be a modern discovery. The materials were purchased by the proprietors of the buildings, and furnished by them to the workmen. Contracts made in the fourteenth century are extant; and they were more frequent in the fifteenth century, some of these being for a year's services. Besides these formal engagements with workmen, entries such as the following, taken from the accounts of one of the Scotch burghs in 1453, occasionally occur:—

To the masonys for the makynge of the key	lib.	3	5 0
For II dusane of hewyne parpannys	lib.	1	8 0
For efter hewynge of fre stanys			11 0
To Gilbert and Dauy for steppis to the key			20 0
For a hunder band stanys			20 0
For stanys			6 0
Schenderis and sande			5 0
To Tyre for reddying of the founde			5 6
To Tyre and tua uther men to help the masonys			3 0
To drynke sylare			1 0
		£3	4 6*

Eighty years later, measuring was employed to determine the quantity of masonwork; and a formal contract, of which the following is a transcript, is selected as an early instance of the use of the Scotch standard measure for building:—

"At Abirden, the XX day of Februarr, the yeir of God, ane thousand V^c. XXXII. yeirs, it is appunctit, agreit, and finale endit betwix Lonorabill man, Thos. Menzies, of Pitfoddells, and Alex Gray, maister of wark to the town of Abirden on the ane pairt, and Pate Franche and Sanderis Menypenny, maisonis, on that uther part, in maner, forme, and effect, as efter followis, that is to say, the said Pate and Sanderis sall big ane blok-house on the sandnes, of XXXVI. fuit of lynth, XVIII. fuit of breid, and VI. fuit of thiknes in the val, and of heicht as beis thocht expedient be the said maisteris of wark and masonis, with gun holles and dur of aistler, as beis thocht expedient be the saidis maisteris, and the heuss to be bigit in the maist souer vise for saulte of the raid and hevin, as beis thocht expedient be the saidis maisteris of wark and masonis, for the quhilke the said maisteris of wark sal deliuer and pay the said masonis for euery rad, three lib. Scottes mone and payaud for the hewandwark, the saidis maisteris of wark findand them all maner of stuff needful thairto, except sande and watter, and the saide maisonis to finde al maner of warkmene thairsellues, and to begunn the wark in al guidly haste. In witnes hereof the saidis maisteris of wark hes subscrivit this writ with thair handes, and the saidis masonis hes sett thair markis to the same, daye, yeir, and place forsaid."

A good deal of Scotch shrewdness is displayed in this contract. It is worthy of notice that there is no reference to a standard thickness for building.

Very well detailed specifications and contracts, extending to many pages of writing, for masonwork of buildings in the seventeenth century, are, unfortunately for us, totally silent regarding quantities and rates. The simple statement that the work is to be executed and completed for a certain sum, payable by instalments at certain terms, being the only information relating to the cost.

Extensive operations of the same period were executed by paying for the materials and for the labour. For examples: the masonwork of Heriots Hospital, Edinburgh, which was completed in 1642, was executed under the superintendence of a mastermason at the weekly wages of 6*l.* Scots, and a yearly salary of 100*l.* Scots in addition: the operative masons had 3*l.* 12*s.* Scots per week. Towards the end of the seventeenth century, masons at Dumbarton were paid at the rate of 13*s.* 4*d.* Scots per day; and there is an entry in the burgh accounts for 5,000 hewn stones for the bridge, which had been bought at the rate of 144½ marks per thousand, or about 1*s.* 10*d.* Scots a piece.

The details of accounts for building to be found in burgh records of the seventeenth century are abundant; but, to the disgrace of the age, these are greatly exceeded by accounts, of the most minute character, of the expenses for burning witches, and it would be easier to ascertain the expense of putting a witch to death than it would be to find the cost of a rood of building.

It is somewhat ludicrous to find an account for mason work occupying nearly a page, the total amount being about 8*l.*, followed by the following, remarkable, among other things, for its brevity (in 1647):—

"For ane supper in Alexr. Ramsay's, with the prowest, and baillies, and commissioners of the Kirke, sixty-four pounds 6*s* 4*d*."

When measurements of mason work became general, the practice, which still lingers in some parts of Scotland, of paying for labour by arbitrary allowances added to the true dimensions of the building, was general—levelling for wall-plates, &c., and measuring all the walls on the outside for their lengths, are instances.

Gradually, by slow degrees, so imperceptible as to be difficult to record, the system of measuring mason work in Glasgow, assumed the form of which the following, from an estimate for tenements built about twenty-five years ago, in the centre of the city, is a specimen:—

"2 feet ruble back wall with vents and polished jambs and all polished and back-filleted dressings, the back-fillets 9 inches broad, plinth and soles 8 inches thick, the outside work run in courses between the rybats, and clean pointed .....Roods 13 24 0 0 at 160s.
2 feet ruble north mutual gable with vents and jambs on both sides in all the *stories*, polished chimney-head and sques, measured as it stands—
Roods 8 27 0 0 at 200s.
Cube stones in pillars of shop-front in solid courses—
Cubic feet 697 0 at 11d.
Do. in lintel course 14 inches on the bed—
Cubic feet 258 0 at 1s. 4d.
2 feet ruble backing of ditto ...Roods 0 12 0 0 0 at 80s.
Polished and moulded hewing of pillars and lintel course .....Sqr. feet 985 0 at 8d.
2 feet polished ashlar front wall with vents and jambs per plan, and architraves and caps, &c., per elevation, above shop lintel course, the shop cornice and great cornice girthed into the height
Roods 8 31 0 0 at 230s."

By the present mode of measurement, and adopting the prices of the day, the cost of the back wall above mentioned, would be as nearly as possible one-half more, or 50 per cent. additional; and in regard to the front wall, the probability is that the increase would be even greater.

In the mode of measurement employed in the estimate from which the foregoing extracts are taken, the true lengths of the walls were reported, the front wall being measured on the outside, the gables within the front wall and over the back wall, and the back wall within both gables; but the heights were taken by girding all the projections, such as base, belt, and sill courses, frieze and cornices, to the line of wall, and gables to the top as if they had been built square, with, in addition, the half of

a

* Read at a meeting of the Glasgow Architectural Society, by Mr. John Shields, measurer.

* It has not been attempted to institute any comparison of the value of money where it is mentioned in this paper, with its value at the present time.

the thickness of the gable added to its height. Brick has since been gradually substituted for stone in building gables of tenements:

The practice of including the valuable stones, and the labour, of such work as form the fronts of our street buildings, in the price of such a measure of quantity as the rood = 36 square yards, was most unjust; and, as might have been expected, this mode of measurement kept the tradesmen in a state of chronic discontent; while the rapid increase in the population and in the resources of the city, and the consequent great increase in the number and importance of contracts for building, attracted so much attention that, in 1814, the Incorporation of Masons framed a series of rules for measuring their work, of which the following are the more important:—

"1st. *Building.*—Building of every description, whether constructed of ruble or ashlar materials, to be first measured and rated as ruble wall.

6th. *Dimensions.*—The dimensions to include no more building than is actually erected.

8th. *Deductions.*—All apertures of doors and windows to be deducted from the building, the size of the daylight of each. When arched, the height to be taken to the spring of each arch only.

13th. *Hewn Work.*—All the hewn work of every description, however situated, to be measured and valued by the superficial foot or yard.

14th. *Hewn Materials.* Materials differing in value to be classed by themselves, and rated accordingly.

15th. *Dimensions, Ashlar.*—The dimensions of ashlar and of work similar to be regulated by the surface, and it is to be understood that the breasts of the rybats and lintels to the bottom of the checks, and the sills 6 inches inwards from the check, are to be included.

20th *Mouldings.*—Cornices and all other mouldings to be taken at the extreme points for the length, and girded across the mouldings, including the upper bed to the line of the wall for the breadth, all to be considered as moulded work."

There are twenty-seven rules and a concluding clause. It is worthy of remark that these rules were submitted to the Dean of Guild Court of the city, and sanctioned by it. Inquiries regarding the control exercised by Deans of Guild in various parts of Scotland warrant the supposition that their approval had not been applied for, out of Glasgow, for centuries.

A number of buildings were measured in accordance with the rules of 1814, but they were never properly established, and speedily fell into abeyance. The first rule relating to building appears to be stringent; it was not, however, held to apply to such work as pillars, &c., of shop fronts, insulated columns, lintels, &c., the stones of which were charged by the cubic foot without being measured as rubble, while such work as buttresses, turrets, and pinnacles of Gothic buildings were measured firstly as rubble by the rood, and then as polished work by the superficial foot, without any separate charge by the cubic foot.

In May, 1840, the mode of measuring masonwork, now in force in Glasgow, was agreed upon and adopted by the architects, measurers, builders, and incorporation of masons. There are in all twenty-eight rules, and the following are quoted as having been less or more subject to question:—

"*Building.*—1. Building of every description shall in general be first measured as ruble work, and classed according to style of work and value of materials. In particular cases, such as columns, pillars of shop fronts, and where heavy cube materials are used, the price may include both stone and building."

"*Openings.*—5. The daylight size of all thorough openings to be deducted from the building, whether arched or otherwise. No deduction to be made for vents, window bossings, or press recesses. The hammer-dressed scontions of thorough openings in internal walls, also returns of projected breasts, or exposed ends of detached walls, will be measured and classed, separately, by the superficial yard."

"*Hewn Work.*—11. Hewn-work connected with walls is to be charged for its additional value, over the price of ruble building. All hewn work of every description to be measured on the exposed surface, and classed and rated separately according to size of materials and kind of work. Circular hewn-work to be measured in the same manner as straight work, but classed separately according to quality. Where bevelled cuttings occur, such as at pediments, skews, &c., an allowance of 6 inches is to be given on each lineal foot of cutting.

Hewn Dressings of Ruble Walls.—12. The rybats and lintels of openings in ruble walls, are to be girded from the bottom of the back fillet, to the bottom of the inside check, and rated either by the superficial or lineal foot. If the latter, the girth to be stated, and, in either case, the price to include the broached tails. Corners, bases, plinths, and skews are to be taken in the same manner as the rybats. The window-sills will have one end projection added to the length, and the breadth taken 6 inches inwards from the check.

Ashlar Work.—13. All plain ashlar to be measured by the superficial foot; window and door rybats, and lintels, in ashlar walls, are to be girded to the bottom of the checks, and where these openings have upstart architraves, or side mullions, the ingoing of the rybat to be taken at the breadth of 6 inches. Window-sills in side walls are to be taken 6 inches inwards from the check for the breadth."

"*Mouldings.*—15. Cornices and other running mouldings to be measured at the extreme points for the length, and girded across, including the upper bed, to the line of the wall, for the breadth, as moulded work, and to be reported by the superficial foot, or lineally stating thickness and girth. Window and door architraves to be taken by the superficial foot, girding from the line of the wall to the bottom of the check, for the breadth, or to be taken by the lineal foot stating the girth.

Columns and Pillars, &c.—16. Columns, pillars of shop-fronts, buttresses, and similar work, where heavy materials are used, are to be taken by the cubic foot, and where said materials are not measured as ruble, the prices shall include for building. The hewing of such work is to be measured by the superficial foot for labour only."

"*Newals, &c.*—19. Stair-newals to be girded where hewn, and charged by the superficial foot, stating thickness; parpend ashlar walls to be measured in the same manner as newals. Note.—The prices of all parpend ashlar walls and steps, platts and newals of stairs, also hearths, pavements, skirtings, shelves, and similar articles shall be held to include building and laying, and not to be charged as ruble work unless particularly stated to the contrary."

"25. It is to be understood that, in all cases, the bevelling and washing of faces and soles, building or filling up savings, splicing window-breasts, plumbing rybats and scontions, clouring bossings of presses and recesses, &c., to a regular and equal thickness, and all matters of a similar description, required to complete the work as represented on the drawings, or described in the specification, and also the clearing away of all rubbish arising from the mason-work, shall be held to be included in the prices of the work without extra charge, unless a distinct agreement is made to the contrary.

26. It is likewise to be understood that cutting batt and dook holes and raggles, and executing the several jobbings required for the carpenters, plumbers, and other tradesmen employed at buildings, are not considered to be included in the prices of the work, but are to be charged separately, with the exception of cases where a special agreement is made in reference to the same."

These rules were in use for a short time after their adoption, but the wide estimating and the general increase of the expense caused by the introduction of so much detail, in place of the mode of measuring walls as they stood, speedily induced the people who had to pay for the buildings to discountenance them; and subsequently the new mode, as it is called, was only employed in the case of churches and other public buildings; many of the tenements which adorn the city having been measured and valued by the loose system previously in operation; and it was not until 1853 that the Glasgow new mode of measurement was definitely and exclusively adopted.

The clause in rule 5, "The hammer-dressed scontions of thorough openings in internal walls, also returns of projected breasts or exposed ends of detached walls, will be measured and classed, separately, by the superficial yard," leads to the supposition that the framers of the rule did not contemplate any separate allowance or measure for the scontions within the hewn work of windows and doors; owing, however, to the practice by some of the measurers of charging these scontions separately, it has become almost universal to add to the entries for rybats, &c., the words "including scontions." This practice is not quite correct, in so far as the inband rybats form the scontions which are thus described separately.

The silence of the rules in regard to the lengths of window-soles not projecting, *e.g.*, such soles as are common in Gothic buildings and in those of the old Scotch and the Elizabethan styles, has led to the practice by some measurers of taking the lengths of these soles only to the extent to which they are hewn on the upper bed; so that in fact a length of stone, in some cases amounting to 12 inches, for which the mason has paid the price of "long stones," is only measured to him as rubble building—with the measure for whatever kind of work the walls are faced with—and is a premium or inducement to furnish soles with as short bearings as possible. This remark applies equally to the lintels of windows and doors in buildings of the styles above mentioned.

For a considerable number of years after 1840, in cases where the new mode was adopted, the practice of charging cornices and similar work of cube materials attached to walls, by the superficial foot, for the extra value of the stone, over the cost of rubble, and for the labour in hewing, as provided by rule 15, was general practice. The 16th rule relating to columns and pillars, &c., was understood to have the literal meaning of the language employed; so that in the case of porticos, and similar erections entirely of cube materials, these were charged by the cubic foot for materials, and by the superficial foot for hewing on the exposed faces, without any separate measure as rubble, and frequently without any reference to building at all. The more general use of cube materials in the buildings of the present day, and the inherent justice of charging such expensive materials as cube stones, by the cubic foot, have gradually produced greater uniformity; so that it is now almost unknown to charge work executed of cube stones, merely by the superficial foot of hewn surface, in addition to the rate for rubble.

The practice of measuring cube materials as rubble by the rood, and as solid stones by the cubic foot, besides charging the hewing of the exposed faces by the superficial foot, has also become more general; and the chief reason assigned for it is, that by this means payment is obtained for the labour in dressing the beds of the stones; by a species of equivalent this may be the case, but it is a clumsy expedient: it is well known that in Glasgow, the cost of the cartage of the materials which form rubble is more than half the cost of a rubble wall; and as the cost of cartage is added to the cost of the stone, when charged by the cubic foot, it is obvious that to give rubble, on its own merits, for these cube stones, is false in principle.

It would occupy more time than can now be afforded to refer with any degree of minuteness to several of the rules which have been quoted, *e.g.*, the rybats and lintels referred to in rule 13, are frequently charged in ways differing from that prescribed; the 25th and 26th rules, relating to jobbings, are somewhat intermingled in the present practice; removing rubbish being almost universally mentioned in estimates.

A brief reference to the practice of measuring masonwork in other places will conclude this paper.

Although there have never been rules printed and circulated in Edinburgh, the measurers there have rules in MS., which provide for allowances and methods of taking dimensions now become obsolete, so that they are very much a dead letter; the actual practice varies but slightly from that of Glasgow at present. In regard to cube stone, these are not charged as rubble when employed in porticos, gate pillars, &c. As already noticed, efforts are now being made to improve the mode.

In Aberdeen (the granite city), the walls are measured complete as they stand; that is to say, a wall faced with hewn work and backed with rubble is charged in one entry by the rood; the openings are not deducted; the dressings of windows, &c., are charged extra per lineal foot for hewing only; cornices and other moulded work are charged by the lineal foot stating the girth, or by the superficial foot; rubble walls and gables are measured without deductions, and the dressings, chimney heads, &c. measured for extra value over rubble; fireplaces and vents are not charged separately; cube stones are charged according to the sizes of the blocks, by the cubic foot, and the hewing on them by the superficial foot; cube materials are not charged as rubble.

In Dundee, the practice is similar to that at Aberdeen; the standard thickness of 2 feet for walls is not strictly applied.

In Dumfries, walls faced with ashlar are measured complete,—the openings are not deducted; the dressings are charged extra by the lineal foot; rubble walls are measured in the same way; cube stones in a rubble wall are measured in the first instance as rubble and then for extra value over rubble; but as there are no professional measurers, the practice varies considerably. In extensive operations the estimates are prepared in Edinburgh or Glasgow, but in other cases the tradesmen get the plans to measure for themselves, and make up their estimates in their own way.

In England, where freestone is comparatively scarce, and where consequently the buildings are more frequently of brick, masonwork does not occupy the prominent position which it holds in Scotland.

From the rules for measuring masonwork at the Houses of Parliament,—and they may be inferred to form, to a considerable extent, the method now in use in London at least,—it will be seen that the system is very minute, and that higher value is placed on labour than in Scotland; besides measuring the hewing of the exposed faces of stone, as is done elsewhere, the plain and sunk beds, plain and sunk joints, preparatory labour, grooves for cement, rebates, metres to mouldings and to sinkings, &c., stopped ends, punching holes, notchings for embrazures, perforations, &c., are measured or numbered. On the other hand, it does not appear that cube stones are measured as rubble.

In some parts of England the walls, where built of ashlar and rubble, are charged separately; that is to say, the ashlar is charged by itself at its true thickness, and the rubble backing is also charged at its thickness: thus a 2 feet wall faced with ashlar would be charged for ashlar, say 7 inches thick, and for rubble 17 inches thick. Considering the great difference betwixt the cost of these two kinds of stone, this method seems to be more just than is that of charging every

kind of wall firstly as rubble, but there would be some difficulties caused by its introduction, such as the payment for bond and other stones; which extend beyond the inside face of the ashlar, or the converse, of causing a multitude of deductions in taking these stones from the rubble.

It is desirable to have greater simplicity in the mode of measuring masonwork, in particular to have the system exploded of charging work as rubble in which there is not a particle of rubble; and it is to be hoped that the attention now being bestowed on the subject will produce greater uniformity of practice, and, above all, lead to ideas more just and enlightened.

THE INTERIOR OF A GOTHIC MINSTER.*

Stalls.—The chorus, or *schola cantorum*, was at first devoid of seats, the ancient discipline requiring a standing position (Stat. Poict., c. 1; Mart. Anec., iv. 1071). In course of time, the infirm at first, and then all the choir, were allowed a resting crutch (Ib., de Ant. Eccles. Rit., lib. iii. p. 9). Forms were used by the clerks (Stat. Linc., 1212; Lichf., 1259). Half the choir stood and half sat during the Psalms (Stat. Lichf., 259; Austin Canons, Mart. n. s., 297); or one between two sat at Psalms, Alleluia, Gradual, and Epistle (Ib., 307). If any could not bear the fatigue, they were to sit *in loco talibus constituto*. At Besançon, sitting during the Psalms was reprobated (Beyerlinck, Theatr., ii. 71). *Quod quidem juris et is nostrum habeat qui in choro existens corporali obstaculo nonnisi sessu frui commode possit.* (Comp. Stat. Ratisp., cap. vii., where only sitting, standing, and genuflexion are permitted in choir,—Mayer, i. 187; and Stat. Braunschw., c. lvii.,—ibid. 115; and "*Incurvi super misericordias aut super formas:*" "*reclinando super misericordias; jaciendo super formas,*" Martene, iii. 327.) Waterville at Peterborough, "*ordinavit chorum*" (H. Cand., 93), and W. de Lindsay, in the thirteenth century, contributed to the stall work (p. 199), which was covered with paintings of Scripture subjects. In the ninth century, benches were introduced by the more luxurious communities; and about the twelfth century, stalls, with their misericords, were introduced as a compromise to rest the canons without deviating from a standing position. The Early English benches may be seen at Rochester: three unique shafts, with capitals of gilded wood, are preserved at Peterborough. At Wells, the Early English stalls have been recently destroyed, and incongruous stone seats erected between the pillars, a plan followed with the stalls at Durham in the modern reconstruction. At Hereford and Winchester are stalls of the thirteenth century; at Gloucester and Ely of the fourteenth century; at Carlisle, St. David's, Ripon, Norwich, and Chester, of the fifteenth century; at Manchester, Beverley, and Bristol, of the sixteenth century. Perpendicular stalls remain at Cartmel, Sherborne, Selby, and Dorchester; of the Cinque-cento period, at Christchurch; Jacobean, at Wimborne; and of the seventeenth century at Salisbury and Durham. There are also some stalls preserved at Hexham, Hull, Peterborough, Ottery, and Tewkesbury. Those of Canterbury were destroyed in 1704; and the carved panels of the stalls at Winchester survived until the civil wars.

The introduction of tabernacles and canopied backs was of later use than the stalls or forms. Bishop Lacy, at Exeter, in the fifteenth century, gave hangings, to be placed behind the canons and vicars, of damask for summer use, and of green powdered with flowers, in winter time to preserve them from wind and cold, and sixty years later cloths were hung in the choir for a similar purpose. The solid wall at Rochester and Llandaff, and the stone screen at Canterbury, c. 1304, enabled the monks to dispense with canopies; but the cold was so keenly felt at Peterborough and Ely, 1254, that caps were worn during the inclement season of the year—Michaelmas to Easter—in choir. Polydore Vergil, in the sixteenth century, gave hangings embroidered with his arms for the stalls at Wells (Leland, ii. 124): those given by Prior Goldstone to Canterbury are now at Aix. The screen hangings used for shelter and ornament at Exeter represented the story of the Duke of Burgundy, and were blazoned with chequey arms, the gift of the Courtenays. At Peterborough, in the transepts, tapestry, with the Deliverance of St. Peter out of Prison, of the time of Henry VIII., is the solitary relic of sixteen pieces used on festivals and suspended from the choir triforium. At Manchester, tapestry of a much later date, c. 1661, and at Chester, served till lately as a dorsal. At Lichfield, four times a year,—from Christmas to Purification, from Easter Eve to the octave of Trinity Sunday, from the Assumption to Michaelmas, and on St. Chad's day,—the church was adorned with silken hangings and cloth. At York, Archbishop Lamplugh gave tapestries for hanging the reredos. At Westminster, tapestries were hung round the easternmost bays at the coronation of Charles I. Until 1765, the bays between the pillars were hung with tapestry at Carlisle: at Peterborough, the tapestry hangings remained till 1643; at Norwich, till 1740; at Westminster, in Dart's time.

At Exeter, the vicars—then as numerous as their masters, the canons—were in the upper stalls at the east end, with only the archdeacons and the chancellor and treasurer beyond them. The annuallars, chaplains, and clerks were of the second form. At Lichfield, by a bad arrangement after the restoration, the stalls of the canons were interrupted by the vicars' and other stalls in the centre of the range. In cathedrals of canons regular, the bishop was vice-abbot, in place of abbot, with a prior as president: in monastic churches, the abbot, under the bishop, had jurisdiction in matters concerning the rule (Frances, xxxi. n. 59, 60).

There were three ranges of seats, called at Chichester "books," but ordinarily forms. At Hereford, in the third form sat canons and priests; in the second, deacon and sub-deacon vicars; in the first, clerks in inferior orders; but at Chichester, the choristers were called boys of the third form, the order being inverted. The double choir dates from the Arian heresy (Frances, p. 87). The clerks sat in front of their masters at Beverley. At each corner of the oblong formed by the stalls, in the nine cathedrals of the old foundation sat a dignitary; on the S.W.—as the highest place of dignity (Scarfantoni on Ceccoperius, lib. i., tit. ix., n. 16)—the dean; on the N.W. the præcentor: hence the terms used to designate the respective sides of a choir, *Cantoris et Decani* (Stat. Linc., 1215); the chancellor on the S.E., and the treasurer on the N.E., thus exercising a complete supervision. At Chichester these stalls were specially canopied. At Salisbury an archdeacon sat next to each of the dignitaries, the sub-dean in the third stall, on the dean's side: in the middle were canons; then priest, vicars, and first deacons, according to age, who were tolerated in the upper grade, by dispensation. The succentor was in the third stall, on the præcentor's side. In the second form were minor canons, then deacons and the other clerks: in the first form were "parvi canonici," and the other "parvi," according to age. Canons first occupied the upper seats in the choir, in the time of Pope Urban II., 1088-99, the inferior ministers using benches or forms (Thomassin., P. 1, l. iii. c. 10.). Every canon was to keep his own seat, and never to occupy the stall of an absent dignitary (Scarf., i. 34, 80; iii. 142). Where all the seats are alike, and the dignitaries (as archdeacons of churches of the new foundation) had no appropriated stall, then the canons might occupy the vacant stalls of their brethren, in order to preserve the choir from an uncomely and bold appearance, and from the intrusion of other persons to interrupt their order (Ib., i. 84). The first stalls on the right and left were always reserved to the first and second dignitaries (Ib., 35). The chaplains or vicars were not to sit in the same line or order with canons, and the place of their chief "Magister Chori," who was chosen by the chapter, was at the head of the second range (Ib. iii., 138). There was an *ordo Personarum* and an *ordo Sacerdotum*, both having stalls at Meaux in 1227 (Ducange, v. 214). Where the seats were returned the superior occupied the most westerly stall. At Ely and Carlisle, exceptionally, the bishop, as vice-abbot, occupied the customary seat of the dean, who sat in the prior's, or N.W. stall. A throne like a large choir-stall was allotted at the extremity of the range, usually on the south, to the bishop, for preaching, or during the daily office (Martene, de Ant. Ecc. Rit., i. p. 132) as in the centre, the place of dignity (Frances, p. 88), and a seat near the altar on the north side, during pontifical high mass (Ibid., 79). In the basilica, however, the bishop's choir-seat was in the ambo (Soc. H. E., lib. vi. c. 5), and used by him when preaching (Mayer, i. 38). His faldstool was in the midst of the apse, and called his throne, because in his diocese he acted as chief ruler, with the priests sitting on either hand and the deacons standing (Ibid., lib. xv. p. 50). The thrones of Durham, Exeter, Wells, and Hereford, of the fourteenth and fifteenth centuries, show the increase of episcopal splendour. With a specially solemn meaning at Durham, Bishop Hatfield raised his throne over a tomb also: (as Mr. Eustace playfully says) he sat higher than the Pope's chair. At St. David's the throne, c. 1500, contains a central stall, with side seats for the collateral canons, with a low partition (c. 1342) round it. The throne of Bristol is c. 1543. At Durham, the bishop frequently occupied an ordinary stall.

The correct position of the archdeacon was facing the bishop, as his "eye." Certain precedence was given to the sub-dean at Salisbury, Wells, Exeter, and York, and in the latter cathedral to the sub-chanter of the canons. The ordinary arrangement was, that the canons regular, and monks, sat in order of dignity or profession—seniors before juniors, priests before deacons, and deacons before sub-deacons; but in secular churches the stalls were marked, being divided into those of priests, deacons, and sub-deacons. The name of his prebend and the antiphon of the psalm which each canon was bound to recite daily for benefactors and departed canons were written up over his stall, as at St. Paul's, Lincoln, Chichester, Wells, &c., to which was added afterwards a notice of his preaching turn at Hereford. Citations to residence were affixed by the prebendary's vicar upon his stall. At Lichfield every canon was provided with his own light and book in choir; and a vestige of the old custom was preserved a century since at York, where, on the eves of certain holy days, a branch of seven lights was placed before each of the dignitaries' stalls. On feasts of nine lections at Lichfield, the chapter and collect were read out of the last stall on the east. At Canterbury, Westminster, and Wells, the lessons are now read from the stalls.

At Exeter we find books for devotional use chained before the altar; antiphoners chained before the dean, chancellor, and treasurer; ordinals in front of the precentor and succentor; and books chained between the choir-step and altar-step. Such chained books still remain at Selby.

The treasurer provided the lights for the choir. At Canterbury, York, Winchester, and Salisbury, a large seven-branched candlestick stood in the centre of the choir. A small candlestick of this kind is in use in the Lady Chapel at Lichfield. At Exeter, on Great Doubles, twenty-six lights burned in choir, and one on the choir-step: the pyx was pendent, and silver coronæ were hung lengthwise between the altar and screen. At Chichester two tapers during the night offices were lighted in the central chandelier, two on the altar step, and one outside the choir near the step leading to the vestry. At Hereford, Chichester, Exeter, and Lichfield, the central chandelier held twenty-four large tapers. The exact number of tapers to be lighted was rigidly defined. The priests, vicars, and vicars choral were required to learn, in their first year of probation, the hymnal and the antiphonar by heart, and in the second year the psalter, so that they would not require lights. At Ripon late in the last century the church was a blaze of light on Candlemas day, at evening service. At Durham there was a bell behind the stalls for signalling to the sacrists the time for ringing or stopping the church-bells. One of the most extraordinary occupants of a stall is mentioned by Bartholomew Cotton, under the year 1290, whom a canon of Hereford found after matins—an unearthly imp vested in robes, but deaf and dumb; however, the canon motioned him under awful penalties to remain until his return, when, with the whole collective chapter, he fell upon the wretched creature "like Germans," put him in fetters, and left him heavily chained before the Cantelupe Shrine. At Lincoln the churchwardens were greatly annoyed by the spirits of Bloet and others walking about the church at night.

Mats (Comp. Reg. of Durh., p. 174) were provided for the upper grade and second form at Exeter annually; at York twice a year. They were also provided in the chapter-house and before the altars. Hay or straw was laid down in the choir, sacristies, and loft, for warmth. At York and Hereford, on great days, it was sprinkled with ivy-leaves. Rushes were also used at Salisbury and York, and at Bristol, even Exeter, silver pendent coronæ were also employed now, when the mayor attends in state. The cold, however, was still felt; for, in 1390, the vicars

* By the Rev. Mackenzie E. C. Walcott, M.A. See p. 329, *ante*.

choral were delated at York for wearing clogs and patterns in choir. At Chichester the church was swept out with brooms twice a year.

At Lichfield the choir, till a recent date, was paved with cannel coal and alabaster. The use of marble pavements in the choir commenced in the seventeenth century; at Canterbury it was laid down in 1704. In the choir of St. David's there is a fine pavement of encaustic tiles; at Gloucester one in the sanctuary of armorial character, c. 1450. Good specimens also remain at Malvern and Worcester. At Canterbury and Westminster very beautiful mosaic pavements have been preserved. Out of the fragments of the French porphyry, which Edward I., in his eighth year, brought from France for his father's tomb, he made pavements of tesselated work (Leland's Coll., iii. 404). At Lincoln, a slab remains in the floor, marked "*Cantate hic;*" and Pugin discovered the marks of the chairs occupied by the rectors of choir. On the great festivals the præcentor "ruled the choir," standing at the altar-step, with the rectors of choir on either side, who carried staves in their hands, with which, marking the time of the chant, they walked to and fro up and down. At Lichfield, and probably in other cathedrals destitute of cloisters, the ceremony of the Maunday took place in the choir. At York there are some stalls and aumbries in the north side of the choir, which were probably connected with the ceremonial. Ancient statutes exhibit some curious customs and grave irregularities in choir; those of Exeter forbid banquetings and drinkings; and complain of talking and levity and irreverence. Bishop Grandison peremptorily forbade the acting of plays at Christmas, in 1360. At Lichfield, on Christmas Eve, was performed the representation of "The Shepherds;" at the dawn of Easter, "The Resurrection;" and on Easter Monday, "The Pilgrims to Emmaus." At York "The Three Kings" were represented at Epiphany, and "The Shepherds" at Christmas, stars being employed in the scene. At Wells no plays or spectacles, or exhibition of monstrous masks by laymen, at Whitsuntide, were to be suffered; nor gesticulations at Christmas time by the vicars during the divine service in the sight of the people, under pain of excommunication. In the earlier statutes a distribution of wine was made after mortuary masses to the canons and vicars present in choir, but a money payment was afterwards made in commutation.

At Durham the brass eagle for the lectionary stood in the choir, and another, of wood, near the choir-door. One was erected at Peterborough in 1472. There is an ancient specimen at Southwell, which formerly belonged to Norstead; at Winchester; York, 1686; Canterbury, 1663, used as a Litany desk; Lincoln, 1667; Bristol, 1683 (now in St. Mary-le-Port); and at Salisbury, 1714. Besides the eagle there was the lectern, or lectricium, for the rectors of the choir at Hereford, probably resembling the stone desks of Wenlock and Evesham, c. 1218 (Archæol. xvii. 278), and that of Gloucester. It stood in the midst of the choir, and was used for the reading of the Gradual and Alleluia, and for the lections on certain high days. The sub-deacon read the Epistle from the lectern at the step of the choir at Hereford, the Gospel being read from the upper step on the north by the deacon; but at Salisbury the Epistle was read from the rood-loft, or pulpit, on Sundays, and when the choir was ruled, but at other times on the choir-step. At St. David's the book-desk used by the bishop rests on the stand of a lectern of the sixteenth century. A Late Decorated lectern in the shape of a pelican remains at Norwich. A simple brass desk is at Wells, c. 1660.

In re-arranging the choir of a cathedral of the new foundation on the principle adopted for seating dignitaries in the old foundations, we can place the dean and sub-dean in the two western, and the archdeacons not canons in the two eastern stalls; the canons residentiary near the western ends; and the hon. canons (answering to non-resident canons) eastward; with the minor canons and their precentor (answering to the vicars and succentor) still more eastward, next the archdeacons, if there is room, or in the second range; and then, perhaps, the vicar in course, as the deputy of the hebdomadary canon, should be allowed a fixed stall in the upper form. In all cases where rood-screens are modern, we shall do well to remove them, and allot the nave exclusively to the laity, with an open screen to the choir entrance. Where the screen is, and the stalls are not ancient, we may form the western part of the choir into a quasi-nave, with the seats of the laity facing eastward; and rearrange the stalls towards the presbytery in sufficient numbers to contain every member of the capitular body, and the entire staff of vicars and clerks, dividing the clergy from the congregation by a low chancel-screen. By also placing open screens in the eastern bays, and by using again the triforia as was intended, large additional numbers may be accommodated both in the choir aisles and those upper galleries.

According to "Eulogium Historiarum" (i. 204), Pope Boniface II., c. 533, first made a distinction between the clergy and laity at mass. By the council of Nantes (658, c. iii.), lay persons were forbidden the choir (Martene, Thes. Anecdot., 962, 1108-9, 1202, 1247; Archæol., xi. 388-9; Frances, c. V. n. 42, 44; Counc. of Tours, 566, c. 4), and Martene complains that the laity, interdicted from approach except for communion (Frances, p. 78), pressed into the choir, and women sat on the altar-steps (de Ant. Rit. Eccles., i. 124); and this, probably, occasioned the introduction of the side screens of the presbytery, as at Winchester, 1528; at Carlisle, 1484; and another of Cinquecento work, c. 1540. They also gave access to the aisles by means of doors, and permitted the passage of processions without interruption to the choir service.

The Rood Beam.—A screen of lighter construction than that which fenced the entrance of the choir parted off the sanctuary at the extremity of the stalls, like a chancel rail. A solitary instance remains at St. David's, and, till recently, at St. Alban's. The end of the moulded beam of the thirteenth century remained embedded in one of the pillars: formerly, an altar of the holy cross, enclosed within an iron screen, stood beneath it. At Malmesbury a similar screen is said to have existed (Eccles., x. 152).

The Presbytery or Sanctuary (Frances, c. v., n. 37-41; c. xiii. 121; Jewell's Controv., i. 198, 310, 311; Conc. Rom. s. P. Eug., ii. c. 33; Bracar., i. c. 31; Vasense, c. 3; iv. Carth. c. 93; Bingham, viii. ch. vi. § 1; Scarf., i. 84), occupied the space between the choir and altar; it was also known as the *caputium*, *secretarium*, and *sancta sanctorum*. An ascent (*gradus presbyterii*) from the choir led to the presbytery, and a second flight of stairs (*gradus altaris*) led from the *planum presbyterii* to the altar. The presbytery usually stands on a higher level than the choir, being raised upon the crypt, the choir in turn being raised above the level of the nave (at Worcester and in other places the latter distinction has been obliterated in modern times); but at Canterbury, Winchester, Rochester, &c., grand flights of stairs still lead up to the choir. At Canterbury, Winchester, Worcester, and York, noble flights of stairs form the ascent to the presbytery; but at Norwich a Basilican arrangement was preserved probably until the stall work was erected, in the five arches of the apse. The steps to the central throne of the bishop remain in the east wall; and the doorway is still visible in the aisle. At that period, when the altar stood in the chord of the apse, a low screen and bench table for the clergy extended on either side, and the aperture in the vault through which the sacrament light was let down marks the position of the high altar. At Ely, Salisbury, and Gloucester a more richly carved boss denotes its site. In the thirteenth century the square east end became common in England, and the apse was replaced by a single east window; and it must be left to the taste of individuals which of the two forms is preferable, the grand apses of Peterborough, Norwich, Pershore, Tewkesbury, Westminster, or the noble windows of Lincoln, Dorchester, Carlisle, York, and Gloucester, and the tiers of lancets at Ely. At Canterbury, on the top of the flight of steps behind the altar, stood the patriarchial chair. The primate's marble throne of the thirteenth century is still preserved, and at Peterborough the abbot's stone chair remained, until the civil wars, adjoining the altar. Above the high altar, which at Canterbury, York, and Worcester was flanked by lateral altars, stood a beam at Canterbury, Westminster, Chichester, St. Alban's, Hereford, and Salisbury, upon which were arranged a rood, the relic chests, angels, and many tapers. At Chichester it was painted, supporting a crucifix and eight lights, and at Canterbury, where it carried seven gilded relic chests (somewhat like those at Winchester, of Cinque-cento date, set up by Fox as the side screens), a majesty, and images of SS. Dunstan and Elphege, supported on two pillars covered with rich metals, and flanking a cross set with sixty crystals. Adjoining it was a gilt, star-like glory, supported by archangels with expanded wings. The high altar erected in 1397, and screened with curtains, was backed by a reredos with two doors leading to the feretory, and immediately behind it was a small sacristy containing reliquaries. At Chichester, Llandaff, Canterbury, and York, there was a sacristy behind the high altar for the reliquaries and the use of the bishop at his enthronisation or pontifical mass. At York and Chichester there was a minstrel's gallery above it. At York were altars of St. Stephen on the north, and St. Mary on the south, and the paschal taper was adorned with colours, flowers, ribbands, and a dove, and, as at Exeter, with pendants and pennons. At Canterbury, on the north, was the altar with the shrine of St. Elphege, and on the south that of St. Dunstan. At Worcester, on the north side, was St. Oswald's; on the south, St. Wolstan's shrine, each with its bracket and western altar.

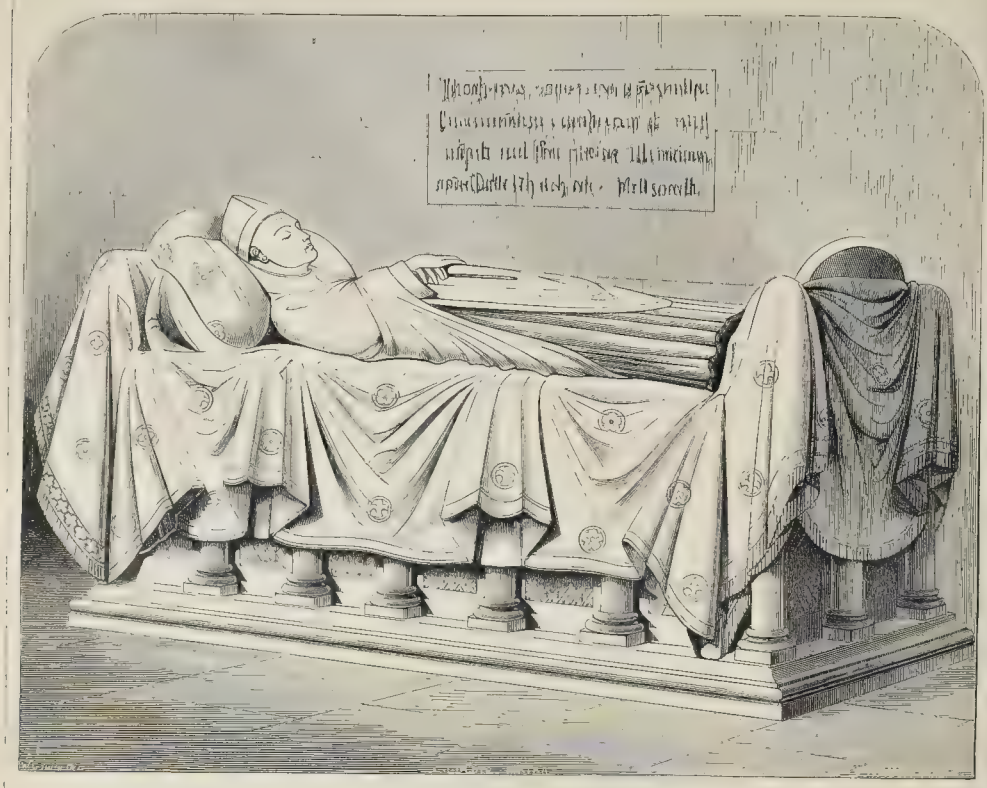
Matthew Paris has fortunately preserved to us a description of the appearance of a Norman high altar at St. Alban's. It had a superb frontal of carved work, inlaid with metal; over it appeared St. Alban's shrine, with relic shrines around, and in the centre the pendant pyx, suspended from the painted vault of the apse. At St. David's, the mortise for the Gospel lectern remains in the altar step; at Canterbury, a small orifice probably served for the same purpose; and at Exeter, the eagle till recently stood below the altar-step. At Manchester, the credence-table of wood, and at Lincoln the Easter sepulchre, with its sleeping guards; at Norwich, the quatrefoiled aperture for the watchers remain. The sedilia, or graduated seats for the priest, deacon, and subdeacon, remain at Exeter, Rochester, Selby, Ripon, St. David's, Ottery, Binham, Worcester, and Dorchester, and Tewkesbury, the latter still retaining their colour; four in number at Westminster, Durham, Furness, Paisley, Gloucester, Bolton, and Ottery, in the lady chapel, and five at Southwell. The chaplain, deacon, and sub-deacon, or cross-bearer, and, on great days, a canon with the mitre, were thus accommodated at an episcopal mass; and on great festivals, when the dean was celebrant, the assistants were doubled; but at Durham there are four sedilia on either side of the altar, these were probably used by the four acolyths in the pontifical mass, one with the mitre, the thuribler, and taper-bearers (Martene, de Ant. Rit. Eccles., i. 221). The præcentor and rectors of the choir had iron folding chairs when ruling the choir. Trivet says, that Edward I. gave the royal chair in Scotland, in 1296, for the seat of the celebrant at Westminster (Leland, Collect., iii. 328). Stowe, Harding, Holingshed, and Fabian mention it thus occupied. Those of Hexham, Beverley, and Westminster were of oak. The frid-stool, or chair of sanctuary, a hollowed seat of stone, is still preserved at Hexham and at Beverley. The privilege was held by many churches, as at Beaulieu, St. Martin's le Grand, Westminster (Archæol., viii. 1), Ramsey, Croyland, Ripon, St. Burian's, Tintern, Jarrow, Leominster, and Whitefriars (Jo. Assoc. Soc., vol. v., pt. ii., p. 253).

Reredos.—Curtains or dorsals originally fenced in the east side of the altar, but in time were replaced by the reredos of stone, as at Exeter, Lincoln, Brecon, Beverley, Bristol, York, Canterbury, Durham, Westminster, and with exquisite specimens, now lost, at Peterborough, Tewkesbury, and Gloucester. But these are dwarfed in importance by the enormous screens which were designed to enhance the magnificence of the high altar at St. Alban's, 1326—35; at Christchurch, Winchester, and St. Mary's Overye, a gorgeous structure, covered with tabernacle work, images, and sculpture, although obstructing the view of the furthest eastern limits of the church, which had heretofore augmented the sublimity of the sanctuary. And yet it appears like the gorgeous veil of a further holy of holies, wherein is the substance of which our earthly services are but the faint shadows. The germ of it may be seen in the panelled east wall at Wells. We cannot portray to our imagination the grandeur of Winchester when its canopied niches were filled with silver figures of saints surrounding the superb jewelled rood, above which hung the crown of Canute; but we may question if it could equal in effect the eastern end of Durham, where more than a hundred statues filled the empty canopies of its exquisite screens, c. 1380, and its pinnacles glittered in the light of countless tapers. Curtains of the richest velvet and silk closed the sides of the altar, on which lay the superb *Liber Vitæ*, the record of departed bene-

factors. Over it sparkled the golden pyx; below, a canopy, crested with a silver pelican. On the north side stood the pelican of brass for the gospel, near the place of the eastern sepulchre; while three lamps, suspended by chains and burning in basins of silver, threw down a tempered light perpetually. From Maunday Thursday until the Wednesday after the Feast of Ascension, a superb paschal candlestick, with seven branches (a type of the pillar of fire that led the Exodus), wrought into flowers of glistening latten, supported the Easter candle, which reached almost to the vault, and was lighted on the morning of the resurrection when the solemn procession, singing the hymn *Christus Resurgens*, with torch and taper, compassed the whole church. At St. Paul's and Durham a buck was offered at the high altar annually, and a lamb by the tenants at York.*

IRON, AND HOW IT IS AFFECTED.†

WHEN we remember that the very best wrought-iron of commerce is, to use the words of the well-known metallurgist Saint-Claire Deville, but a metallic sponge, like platinum, the pores of which have been simply closed up by pressure or percussion; that, in one word, ordinary wrought-iron has never, as wrought-iron, been fused, it will be seen that the uncertainties qualifying the material itself are still greater. Mr. Mallet thus found that, while the original hammered slab of a very large forged mass had a breaking strength of 24 tons to the square inch, it fell progressively to 17 and 16 tons at the different places of the mass, down to even as low as 6½ tons in some parts. Unless this iron had been burnt, its tenacity could doubtlessly have been restored; and, if drawn into wire, its breaking weight might have been increased to perhaps 90 tons to the square inch,—at least before annealing. An average of 188 experiments, made by Mr. Kirkaldy on rolled bars, gave a maximum breaking strength of 30¾ tons, and a minimum of nearly 20 tons to the square inch. These influences of the manufacture merely on the quality of wrought-iron are almost independent of the chemical constitution of any individual bar. For instance, until it be proved to the contrary, there are many reasons for the general belief that the cold shortness of wrought-iron is due to the presence of silicon and carbon, and its hot shortness to that of sulphur. A fractional percentage of copper also makes wrought-iron hot-short. In truth, there are probably no two bars or parts of a bar of an exactly similar chemical composition, or in an exactly similar state of molecular aggregation, and, therefore, of an exactly similar breaking strength or elastic limit. Even these are only a few of the elements of uncertainty in structural materials. But, when we further take into account the varied strains of extension, compression, distortion, twisting, and bending, to which mechanical structures are more or less subject; that the work done by a gradually applied load is doubled if this load be applied suddenly; that the impulsive strain of a moving load is generally more or less intensified by vibration; and that the varied shapes and arrangements intended to receive these strains must be often as much fixed by financial as scientific considerations, then the reason that the best engineering practice makes the ultimate strength of a wrought-iron structure from four to six times the working load must be even popularly evident. But these factors of safety are not sufficient. The structure must be tested as searchingly, and as far as is consistent with safety,—as far as is possible without injuring the material and its relation to the structure. In our case this limit is, in the main, given by the limit of elasticity of wrought-iron under extension, as this limit is less for wrought-iron than that of compression. It is also self-evident that the mode of testing adopted ought to approximate as nearly as practicable with the kind of stress the object is intended to undergo in practice. After loading a railway bridge with the greatest passive, or perhaps impulsive load that would ever come upon it in practice, the deflection and the permanent set, if any, are both carefully noted. As a boiler is subjected in practice to a complex train of mechanical and chemical forces that are always striving to break their bonds, its ultimate strength is made from six to eight times the working stress, and it ought to be periodically tested to half its working pressure. Its extension under this pressure is sometimes — and should always be—measured by the volume of water that is pumped in by pressure after the boiler has been filled; while the permanent set is determined by the difference between the volume pressed out by the contraction of the boiler when the pressure is withdrawn, and the volume of the water that remains in the boiler after the test—allowance being of course made for any slight leakages and sweating at the joints. In first-class locomotive works the deflexion and permanent set of the steel springs are always tested in an apparatus for the purpose. It may here be remarked that, although the designs of all the successful wrought-iron structures ever built have been based on the assumption of a limit of elasticity, nevertheless the relation of the permanent set of wrought iron to its ultimate resistance under a given load, is still a subject of some discussion. We have, on the one hand, the testimony of Professor Eaton Hodgkinson, who says, that "the maxim of loading bodies within the elastic limit has no foundation in nature;" and, on the other hand, some appear to believe that iron is even improved by breaking it under at least a tensile stress. Mr. Hodgkinson found that a rod, 10 feet long, and of 1 square inch section, took a permanent set of 0·0005 of an inch under a static load of 1¾ ton. Mr. Edwin Clark obtained very similar results. Such a microscopic set, however, could be referred to the elongation caused by the heat generated by the internal friction of the particles, or to the probable fact that these bars were also new; and it is conceivable that they might have taken a slight permanent set, just as new ropes take a permanent set, without injury, when the strain is first applied. There are, indeed, very few forms of wrought iron in which its internal particles are not, *ab initio*, subject to some mutual strain. At any rate, these elongations were very slight, and increased uniformly up to tensions varying from about 10 to 15 or 16 tons on the square inch. Beyond these strains the bars elongated in an irregular manner, until they at last broke. At the same time, as Dr. Rankine remarks, the demonstration by Mr. E. Hodgkinson that a set is produced by a strain much less than what would injure the specimen, renders the determination of the proof-strength a matter of some obscurity; but Dr. Rankine points out that the best test now known is the not producing an increasing set by the repeated application of a load. Some years ago, Mr. Loyd, of Woolwich, made certain experiments which have been cited as proving that a breaking strain does not injure iron, even when this strain is four times repeated; or rather, that after breaking a bar into, say, two pieces, the two pieces are thereby made stronger. In, for instance, experiment 2, the 1⅛ bar marked C was found to break with 33¾ tons, with a stretch of 9¼ inches in 54 inches; a piece of this bar then broke at 35¼ tons, with a stretch of only a quarter of an inch in 36 inches; another piece of the bar, 24 inches long, was broken at 37 tons, with a stretch of one inch; and at the fourth and last breakage was found to give way at 38¾ tons, but without any stretch at all. . . .



There is probably no metal the strength of which is influenced in such a remarkable way by temperature as iron. As M. Baudrimont showed in 1850, the tenacity of iron is less at 100° C. than at 0° C., but at 200° it is greater than at 0°, and these results have been exactly confirmed by Dr. Fairbairn in some experiments on boiler plates, communicated in a paper to the British Association. At yet higher temperatures this tenacity is of course diminished; and Seguin has shown that iron, the tensile strength of which could be represented by 100 at 10° C., had this tenacity lowered to 90·5 at 370° C., and to 58·7 at 500° C. In the royal dockyards of Woolwich and Portsmouth the atmospheric temperature during the testing of each anchor or chain is carefully noted, although the proving houses themselves are kept at a mean temperature of 56° Fahr., by means of stoves, which also thus save the water-pipes from freezing. This temperature of course falls a little during the winter and rises in summer, as the heat in the shade generally varies in England from about 76° to perhaps 34° Fahr. The action of frost on iron has not been completely investigated; and Dr. Percy recommends that some accurate experiments on the question be undertaken by the Institution of Civil Engineers. The daily observation of practical men has, however, as in so many other cases, preceded the deeper investigations of science. All workmen know that their tools, such as picks and chipping hammers, which have to undergo percussion in frosty weather, are then more liable to get broken. All chains are well known to be more subject to snap under the same circumstances. There is always a notorious increase of accidents through breakages, both in the permanent way and rolling stock of railways during frosty weather. It is stated that during the severe winter of 1860-61, 498 rails were broken on the Chemin de Fer de l'Est, from the 11th December to the 31st January inclusive. No less than 258 were broken from the 21st to the 25th of January, during which period the thermometer descended to—7·8°, and even to—16° centigrade. General Morin relates that during the northern campaigns of the first empire the artillery veterans used to believe that wrought-iron was subject to freezing, and after long winter bivouacs they never began their day's march without striking the gun-carriage axles in the direction of their length, and the vibration thus produced was said to "thaw" the iron. An intense cold is also said to have enabled the French garrison of Hamburg to disable the cast-iron siege guns, by knocking off the trunnions before evacuating the place. Mr. Lenox stated, in evidence, before the 1860 Committee, his belief that a cable would stand a test in warm weather that it might not in cold. The crews of the fishing vessels on the coast of Nova Scotia find that the cold renders their cables so brittle that a length of hempen cable is used for the portion out of the water, while the anchor end is kept from the vicissitudes of the atmosphere by the usual average temperature of the sea. A few experiments made by Mr. Kirkaldy showed that the breaking strength of a bar is slightly reduced by freezing when a gradual breaking load was applied, but that this difference between a frozen and an unfrozen bolt is much more increased by a suddenly applied load, being 3 per cent. less when frozen. The usual way adopted by French engineers to test rails is, as we have seen, to prove a percentage of the lot by means of a falling weight. Some tests were carried out a few years ago by M. Couche, on a number of rails, of very good quality from the Anzin works. The monkey weighed 300 kilogrammes, and the distance between the supports was 1m. 10. When the thermometer varied from —4° C. down to —6° C., the weight had only to be raised, in an average of twelve experiments, to a height of 5 feet 6 inches, in order to break the rail; but when the thermometer rose from +3° to +8° C., then the weight had to be lifted for a fall of 7 feet 9 inches. Similar experiments, conducted in 1860, showed that a difference of temperature from — 4° to + 5° Centigrade, was sufficient to greatly influence the height of fall necessary to break the rail. It is not unnatural to suppose that the particles of iron, after being worked at a heat and allowed to cool and set at a medium temperature, should when that temperature is lowered, get into a state of mutual strain; or that any initial mutual strain should be thus intensified. The toys made of suddenly cooled glass, known as Prince Rupert's drops, are exaggerated instances of a similar action. The outside portions of a bar, of whatever size, would evidently cool, and consequently contract, first of all. The inside portions would also at last cool; but, having kept the outside portions distended, when the inside does cool, it then becomes a question, to be determined by various circumstances, whether it would pull the outside shell into a state of compression, or whether the outside shell will draw the inside into fissures by tension. A somewhat similar explanation is given by Mr. Mallet of the rents caused in the interior of very massive forgings; and this state is probably always induced by the conditions of cooling in a small bar, but with, of course, a smaller range both as to size and temperature. In any case, it is apparent that a ductile, elastic material ought to be less affected by these doubtlessly complicated conditions of tensile and compressive strains. It is, therefore, probable that a hard, harsh, iron would be more affected by frost than a soft ductile iron; and also that the breaking strength of both qualities would be less affected by cold than their extensibility.

* To be continued.

† From the paper by Mr. F. A. Paget, C.E., referred to in our last.

THE GUTTER IN MODERN FRENCH ARCHITECTURE.

THE most distinctive feature of the cornice of a modern house in Paris, and sometimes of the entire front, to an English eye, is

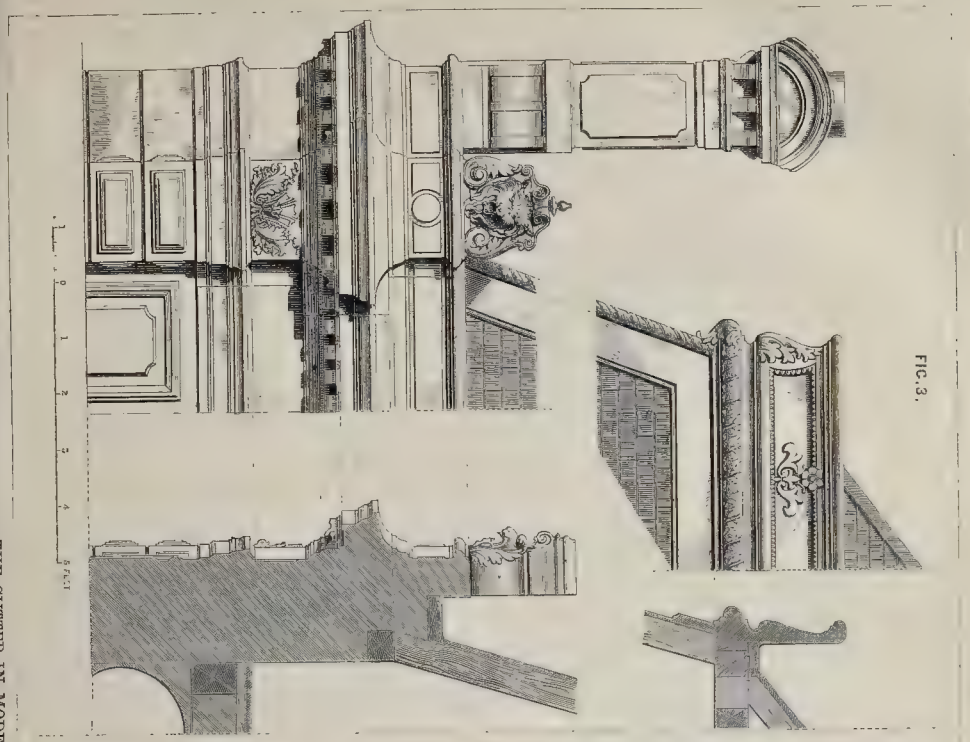
THE MONUMENT OF BISHOP ANCHERUS, STA. MARIA MAGGIORE, ROME.

the *chêneau*. The word may be taken to mean gutter; and it would be used for that member of the antique cornice which was generally, as in Roman work, a cymatium ornamented, and furnished with lions' heads to spout the water from the hollow eaves'-gutter. But the *chêneau* of the French architects is different. Instead of being dished out of the top member of the cornice, the *chêneau* is rather to be regarded now, and perhaps more in accordance with the etymology, as a trough-gutter, placed upon the decorative member before mentioned. In position, it may be compared with a blocking-course, or with the parapet to the gutter of an ordinary London house which has a merely decorative cornice, excepting that the *chêneau* will in many cases be in advance of the face of the wall. With us, the blocking-course is seldom decorated; but the French seize upon this very feature, and give it the utmost enrichment, whilst the cornice below will be left plain. Adopting their system, it follows that the cornice has very slight projection. Such is the arrangement (only, some would say, carried to excess,) of the cornice in the new portion of the École des Beaux Arts, where the *chêneau* is most remarkable for its height, and for its richness of ornamentation. The examples given in Mons. Daly's work on the "Architecture of Paris" (our review of which is not yet finished), somehow, do not happen to include many of the enriched forms of the *chêneau;* but the thing itself will be understood from nearly every one of the examples. There is one of them however, the villa in the Avenue de l'Impératrice, by Mons. Hermant (Fig. 1), which shows the combination of a scolloped line with rosettes and *antefixæ*, which is very common, but does not altogether satisfy us. The author of one of the designs for the South Kensington Museums, has introduced the *chêneau*, as mentioned in our notice, and treated it very successfully in combination with *antefixæ*. Another form is well exemplified in the Hôtel des Ventes Mobilières, as given in Mons. Daly's "*Revue de l'Architecture et des Travaux Publics*," and which we reproduce (Fig. 2). Here the *chêneau* is a moulded blocking-course, with *antefixæ* at certain distances on the face; and between them are two small rosettes, or five-leaved flowers.

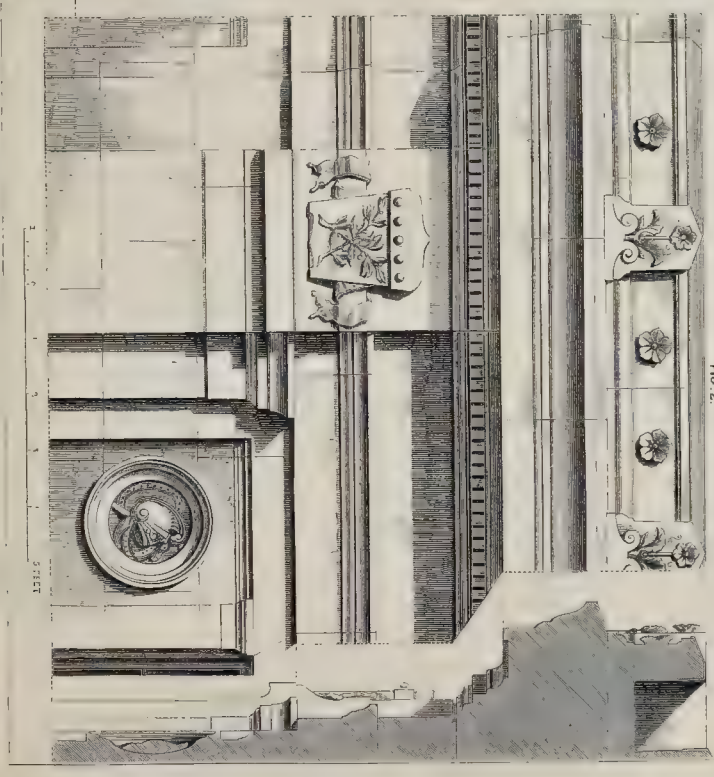
In other examples, *antefixæ* may stand upon the *chêneau* over each pier or pilaster, as in Fig. 3, from a house on the Boulevart Monceaux. Some of these features deserve to be looked at by those architects who adopt Sir Charles Barry's vase-formed terminations, which were not very successful.

In many cases the *chêneau* may appear as no more than a zinc or lead-covered trough.

In the more richly-decorated *hôtels*, a *chêneau*, or gutter, will be found at the meeting of the two slopes of the Mansard roof, generally upon an ornamented roll-moulding (Fig. 3). In this case, of course, lead or zinc will be employed.



The French are first-rate artists in this kind of metal-work, as in every other; and the manner in which the kind of work contributes to the effect of the roofs of the Louvre can hardly be forgotten. In the *hôtels* of the first-class, the dormers are richly carved in stone; but elsewhere, zinc is much employed for these features, and for oval-formed lucarnes. To the principal entrance of an *hôtel*, there is generally a *perron*, or glass-covered shelter to the steps and threshold. The metal-work of this is very elaborate. The feature generally cuts across the masonic architecture, with no effort made at combination.



THE MONUMENT OF BISHOP ANCHERUS, ROME.

This remarkable monument stands in a side chapel of the south aisle of the ancient church of St. Prassede, near to Sta. Maria Maggiore, in Rome. It represents Bishop Ancherus, a native of Greece, and titular cardinal of the church. The date of his death is given in the concluding verses of a long inscription in Byzantine characters on the slab above the monument, as follows:—

Anno milleno centum bis et octuageno
Sexto decessit hic prima luce Novembris.

The tomb and effigy are executed in marble. The latter is vested in a flowing chasuble, with low jewelled mitre, and embroidered gloves and sandals. The monument has panels of mosaic, and a fictitious arcading, the upper portion of which is hidden, as it were, by an ample pall sculptured in fine folds and diapered with roses and *fleurs-de-lys*. The drawing we have engraved was made from a sketch on the spot by Mr. George Goldie.

THE GUTTER IN MODERN FRENCH ARCHITECTURE.

SANITARY CONDITION OF WOLVERHAMPTON.

THE value of life in Wolverhampton, as compared with all England, is, for males, 2·815 against 2·305; and for females, 2·673 against 2·132.

The mortality of children under five years of age stands as 20·959 per cent. against 13·517 for England altogether.

It appears from the Registrar-General's tables that the value of life in Wolverhampton is below the average up to the age of 15: from 15 to 35 it is above the average: from 35 to 85 it again sinks.

"The excessive mortality of children in this English town," says a paper published in the *Wolverhampton Chronicle*, "demands serious investigation. Why the value of life should rise from fifteen to thirty-five, I cannot explain: its fall during the advancing years of manhood is more easily accounted for, as arising from overwork, and destruction of the organism from irregular life amongst the lower classes."

The average annual rate of mortality in Wolverhampton from all causes to 10,000 persons living is 28, two or three above the average of Staffordshire as a whole. Excepting Manchester, St. George's-in-the-East (London), and Leeds, there is no town in the kingdom that presents a higher death-rate. The fluctuations from year to year are very remarkable. Calculating the population as numbering at present 63,000, the rate of mortality in 1863 stood as 28¾ per 1,000, by the side of 24·8 per 1,000 in 1862.

The water-supply is described in the paper quoted as being derived from two sources, from wells and from the supply of the Wolverhampton New Waterworks Company, founded in 1855. The water of the town naturally supplied is abundant and good. The company's is derived from a brook at Cosford, in Salop, nine miles from Wolverhampton; but supplementary supplies are pumped from borings through the red sandstone at Tettenhall and Goldthorne Hill. There is no filtration of the water. The supply pressure is sufficient to cover all the houses. In many houses there is no ready water supply; and the inhabitants seek for it at pumps in the street: water is in this way used over and over again to save carriage. The Board of Health has given orders to several owners of houses to provide water-supply.

The drainage of the town at the present moment is very imperfect. Surface drainage is general, and cesspools are abundant. Naturally, the town is well placed for drainage, being on a sandstone rock, and being situate so high that the flow from the drains is easy. There are also several outlets for the escape of water, while the sandstone acts as a filter for the removal of a large portion of the mere watery part of the sewage. Such errors as exist in the drainage of Wolverhampton will shortly be rectified. There is now a proposed plan for the complete drainage of the town. The plan has been inspected by Mr. Rawlinson on the part of the Government, and approved of by him; and sanction has been obtained from Sir George Grey for effecting a loan of 37,000*l.*, repayable by instalments, extending over a period of thirty years, for the purpose of carrying out the scheme.

The sewage of the town has been to a certain extent utilized, for the town council have for some time past had an arrangement with a firm of contractors (Messrs. Deans & Son) for the removal of night-soil, &c, and this firm has disposed of the sewage to a large extent for application to agriculture. Last year, however, the sanitary committee, with the sanction of the council, entered into a contract with the Wolverhampton Manure Company for the removal of manure. The conditions are somewhat singular. The contract is for a term of fifteen years, dated from Lady-day, 1864. The removal, cleansing, &c., are to be effected by the contractors to the satisfaction of the local Board; for which service the Board is to pay the contractors 500*l.* for the first year of the term, 400*l.* for the second, 300*l.* for the third, 200*l.* for the fourth, and 100*l.* for the fifth: for the remaining ten years no payment is to be made. The contractors have power to determine the contract at the end of any one year, upon giving the local Board three calendar months' notice in writing. The Committee congratulate the council that by this proceeding 1,050*l.* will be saved for the first year.

But little attention has been paid to the ventilation of private houses or of the public buildings. In the Agricultural Hall, however, there is carried out a simple mode of ventilation, consisting of shafts in the roof of the building, across each of which is a septum of wood, which can be made to open, by means of a cord, into four parts. This mode of ventilation is said to be effective.

The dwellings of the poor in this town are much superior to those that are met with in most of our agricultural districts; but amongst the poorer classes the internal management is said to be bad, and the rooms shockingly dirty. Overcrowding, moreover, prevails to a great extent, with the evils consequent upon it.

THE INSTITUTION OF ENGINEERS IN SCOTLAND.

AT the concluding meeting of the session, the prize gold medal for the best paper contributed last session was presented to Mr. David Kirkaldy. The Chairman said,—These prize medals have hitherto been awarded by the votes of the members of the Institution; and, seeing that we meet here on a footing of equality; that we do not know and do not acknowledge any difference of wealth or social position; that we recognise no distinctions but those of superior intelligence; it is most honourable and most meritorious for any of us to receive at the hands of his fellows one of these prize medals. The merits of Mr. Kirkaldy's work this Institution is peculiarly fitted to judge and appreciate. We see the ability displayed in the investigations: we know the immense labour and untiring perseverance which it requires. Mr. Kirkaldy has not confined his investigations to an inquiry into the strength of different qualities of iron and steel, but has extended them to an examination of the origin of the differences of strength arising from the conformation of the material: he has elaborated most carefully the apparent difference of strength due to the contraction of the breaking section: he has measured the amount of extension or stretching, which, in a sense, is a malleability, caused by the breaking loads in the different material tested: he has traced out the effect of both cold and hot rolling and tensile extension on the strength of material: he has investigated the different and relative properties of iron and steel, which are due to quality of material, to original manufacture, to the treatment of the material by workmanship after manufacture, to the kind of use to which the material is applied; and he has not omitted the effect of the climate in which the material is used.

THE BUILDING TRADES DISTURBANCE.

AT Birmingham the committee of the masters as well as that of the workmen meet frequently, but during the last week no progress was made towards a termination of the strike. The workmen's committee are said to have received applications from Newcastle-under-Lyme, Nottingham, and other places, urging that men might remove to these towns, where they would be provided with employment, and a large number have left.

At Walsall the majority of the bricklayers and carpenters are out on strike for a reduction of the hours of labour.

At Poole, in Dorset, the bricklayers have struck for an increase of wages and a diminution of the hours of labour.

At Malvern the master-builders of the town have held a meeting to consider the subject of the strike, which it appears was not arranged, as reported, so far as regards the bricklayers. It was suggested that a conference would be the best means to accomplish a proper arrangement, and the meeting unanimously approved of the plan. A disposition was shown to grant the alteration of time which the men desire.

At Plymouth the trade has been at a standstill from the strike of masons' labourers for an advance from 16s. to 17s. a week; but is now in movement again.

In Cornwall the following are the average wages paid to men employed in the various branches of the building trades:—Penzance, carpenters, 18s., but there has been a movement for an advance to 20s.; masons' stonecutters, 24s., providing their own chisels and hammers, which require very frequent repair, the granite being very hard to work; plasterers, 24s.; masons' labourers, 15s. Flour at Penzance is 4lbs. for 5½d.; beef, 6d. to 8d. per lb.; veal, 4½d.; mutton, 6d. to 7d. Falmouth: Masons' labourers, 18s.; carpenters, 18s.; ship-carpenters, 23s.; plasterers, 20s. and 21s.; builders' labourers, 15s. to 16s. Truro: Wall masons, 17s. to 18s.; masons' labourers, 13s. 6d. to 15s.; carpenters, 18s. and 20s.; plasterers, 18s. and 20s. The higher prices named are the exception. Hours from six a.m. to six p.m.; Saturdays, from six a.m. to five p.m.; one hour and a half allowed for breakfast. The building trade is regular, not brisk, and the men are believed to be well satisfied.

At Hull, the navvies employed in the erection of the Hull town hall, the riveters' labourers at the iron shipbuilding yards, and the workmen of some other branches have struck work.

At Grimsby, the bricklayers have struck for an advance of 6d. a day. The masters offered to cede the advance on condition of being allowed to pick their workmen, but this condition was refused.

At West Hartlepool, the great demand for labour in the iron shipbuilding trade has given rise to a strike at Messrs. Pile, Spence, & Co.'s yard, West Hartlepool. The particular branch which now is at variance is the "holders-up," who are in receipt of 23s. per week, and demand 1s. extra; basing their application on the wages paid at Sunderland, and other northern ports. The "riveters" are also off work, in consequence of the absence of the "holders-up," and they also have given notice that they will not resume their employment unless they receive 1s. per 100 extra for seven-eight work. Altogether there will be between 200 and 300 hands out of work.

In Scotland matters are also becoming unsettled in the trade. The Wick masons have gone out on strike for an advance of wages of 3s. per week. The Court House and the large block of buildings at the end of Bridge-street are the only works of importance at present going on, and there are now only a few apprentices employed on them. The number of workmen off work is about forty.

On the Tain and Bonar Railway the navvies struck work, demanding an advance of 2s. each per week. They marched in a body into Tain, where, on making their demand known to Mr. Grainger, the contractor, he immediately granted them 1s. additional, with which the majority seemed satisfied, while the whole of them resumed work on the following day.

HARBOURS OF REFUGE.

IN a country like this, the prosperity of which in a great measure depends upon our marine, it ought to be a chief consideration to preserve our vessels, and, what is of far greater consequence, the lives of those "that go down to the sea in ships."

Since the dawning of the present century there has been much good done. Many lifeboats have been placed on dangerous parts of the coast, and by this means numerous and valuable lives have been saved. Lighthouses have also increased in numbers, and been rendered more efficient by the application of modern inventions. There are other beneficial agencies at work: for instance, the entrances to several harbours have been materially improved: at the mouth of the Tyne a gigantic work is in progress, which, when completed, will make this one of the finest harbours in the kingdom. The exertions and large expenditure of the late Marquis of Londonderry have made at Hartlepool a tolerably safe port in a storm; but, until the great sea-wall and embankment at Tynemouth be finished, the "Black Middens" and the "Herd Sands" will continue to be places of destruction to both life and property. At present, the entrance to the port of Shields is only passable through a very narrow channel, and this is not available except at certain states of the tide; and, in rough weather, the ships, which are often brought here in the hope of shelter, are cast either on the rocks or the opposite sand. If we had the means of obtaining the particulars, the number of men who have perished within sight of the ancient priory since the days of Queen Elizabeth would form a terrible list. Tradition says that, from time immemorial,—probably as far back as the Roman occupation of England, and during the occupation of the promontory by the prior and monks of Tynemouth,—there was a pharos or beacon placed here to the south of the modern lighthouse. Not only has all trace of this disappeared, but the rocks on which it stood have crumbled away by the encroachment of the sea. In a new form the morning light still stands here; but, until about fifty or sixty years ago, this was rendered comparatively useless in conse-

quence of the want of another light on the inside of the bar, which would guide the ships through the dangers of the narrow water-course, and signal when the state of the tide would, even in calm weather, admit of the safe passage of vessels. This want has, however, been supplied, and other lights are placed along the east coast; but, at the date above mentioned, the coast from the Nore to the extreme northern point of Scotland was left in an almost entire state of darkness. Even now there is need of more lighthouses; and, notwithstanding all that has been done, the state of our sea-bounds is disgraceful to the greatest maritime nation in the world. Year after year the account of disastrous wrecks is sad to think of; and, while the most competent authorities are of opinion that a chief part of the loss might be prevented by the establishment of a sufficient number of harbours of refuge, the Board of Trade and the House of Commons discuss the question while our seamen are drowned by the hundred and our property lost to the value of millions. Mr. Lindsay has once more brought this important matter before the House of Commons, and reminded the members that, by a committee of that House in 1858, by a royal commission in 1859, and by a resolution of the House in 1860, the construction of harbours of refuge along the coasts of Great Britain was strongly recommended.

Previous to the above dates in 1852, a committee was appointed to inquire into the cause of the excessive loss of men and ships: the late Mr. James Wilson was the chairman of that committee, who reported that, in 1852, the tonnage of vessels, foreign and home, sailing inward and outward to and from British ports, amounted to thirty-nine millions of tons; and they estimated that from 1852 to 1856, the number of ships lost amounted to 5,328, and that the lives of the men lost with those vessels amounted to 4,184. The substance of the report of this committee was as follows:—that "considering what constitutes the chief cause of commercial greatness of this country, and considering the enormous risk to which life and property are exposed, there is no object to which public money can be more beneficially and humanely applied than that of the construction of harbours of refuge."

When we find that, in the course of the time above mentioned, over five thousand ships and more than four thousand sailors have perished, and that the value of the property wrecked is estimated at two millions and a half in each year, it becomes most important that we should consider how much of this might be saved by the completion of the harbours of refuge which have been recommended by practical men.

After all, it is the matter of expense which is the main consideration, and whether the harbours shall be made at the national cost or by means of local rates. It is, however, clear that a large part of those charges should be defrayed by the Imperial exchequer, which might in the end be repayed by ship and other port dues.

In all works of this nature, when the skill and strength of man are brought to battle with the ocean, there always has been, and to the end of all time there will be, a degree of uncertainty in the matter of estimates; and Mr. W. Gibson, on the part of the Government, objected that the sum mentioned by the Commissioners would be insufficient for the intended purpose. According to the report of the Commission, the whole sum to be expended would be 1,500,000*l.*, of which the Treasury was to find 2,350,000*l.* All that Mr. Lindsay asked the Government for was 134,000*l.* per annum for ten years. It was also urged that, especially in time of war, these harbours of refuge would be of as much service to the navy as to the mercantile marine. And, even looking at the question from a money point of view, if we admit that property to the amount of a million a year only would be saved by the construction of harbours of refuge, the investment would pay well.

The arguments advanced by Mr. Gibson against Mr. Lindsay's proposal were weak: nevertheless the proposal was lost by 58.

POST-OFFICE SAVINGS BANKS.—The deposits received in 1863 amounted to 2,649,919*l.*: the withdrawals were 1,026,207*l.*, withdrawals including interest as well as original deposit. The principal and interest due to depositors at the end of 1862 was 1,698,302*l.*, and at the end of 1863, 3,376,828*l.*, or very nearly double the amount at the beginning of the year. The charges of management and expenses for the year 1863 amounted to 25,500*l.*

PROPOSED NATIONAL GALLERY, BURLINGTON HOUSE.

THE estimate of the sum that will be required for the proposed building, including finishing and decoration, is 152,000*l.* The site consists of about three acres and a half, of which one-half is occupied by Burlington House, with its two wings and its colonnade, and by the court-yard which they surround. Mr. Cowper says these buildings need not be disturbed at present, since the garden which occupies half of the site will furnish ample accommodation for the pictures, ancient and modern, belonging to the Trustees of the National Gallery, and also for the additions to the collections which may be expected by gift and purchase for many years to come. The main entrance of the new building will be through the central hall of Burlington House. The proposed building will be 300 feet long, and 218 feet wide. That part of it which will be devoted to the exhibition of pictures will be of one story, lit from the ceiling, and will provide 3,000 lineal feet of wall-space in a horizontal line, exclusive of doorways, and 36,000 superficial feet of floor space. The larger galleries will be 40 feet wide and 40 feet high; and the rooms for small pictures will be 21 feet wide, with a proportionate height. The only external elevation that will be visible will be at the northern side in Burlington-gardens, where the board-room and offices of the trustees and the residence of the keeper will be placed in two stories, and where there will be a public entrance. On the southern side, where the level of the ground is lower, there will be a basement story, and the whole building will be of fire-proof construction.

SCHOOLS OF ART.

AT the Southampton School, eight medals and three "honourable mentions" have been awarded on twenty works done in four months, and forwarded to London under the new regulations. Four of the rewarded works are selected for competition for national medallions. ——From the Stroud School twenty-three works were sent for competition, and of these only eight failed in gaining medals, while eight have been selected for national competition. From Gloucester, twenty-three works were sent up, and ten medals have been awarded to the pupils, and six works have been selected for the national competition. Four medals and one "honourable mention" have been gained by students at the evening class at Gloucester, and several of the medal-winners at Stroud also belong to the same class.——The Cheltenham School has gained nine distinctions in the recent examinations. The works of three students are retained to compete for the national medallions.——To the Macclesfield School twenty-two local medals and one "honourable mention" have been awarded, and seventeen have been selected for national competition. Only twenty-eight drawings were sent.——By the Birmingham School thirty medals have been taken, and seven "honourable mentions" also awarded.——The Lincolnshire School has won twenty-two medals and ten "honourable mentions," and seven drawings have been selected for national competition.

THE LECTURE HALL OF THE LIVERPOOL INSTITUTE, MOUNT-STREET.

THIS hall, which is an amphitheatre, with a gallery, and containing accommodation for 1,200 persons, has recently been decorated according to designs supplied by Mr. H. B. Roberts, of the Liverpool Academy of Art, to whom the ornamentation of the Philharmonic Hall was entrusted on the last occasion, and whom the directors of the Institute engaged to devise and superintend the decoration of their lecture hall; and the painting and marbling have been executed by Mr. Davis, of Rathbone-street, the contractor. The following is a description of the work:—The ceiling is painted fawn colour, with border of double Greek key ornament in brown, and corners inlaid with red honeysuckle. The centre in white and gold, with red mouldings and band of blue and white, ornamented with purple honeysuckle. The chandelier is stone colour and gold. The skylights have been re-glazed with strong plate-glass, which diffuses a much greater and pleasanter light throughout the hall. The counter lights are painted Etruscan brown, the styles grey, with purple ornaments and gold mouldings. The large cove is painted pink, resting on a cornice of white and purple scroll-work, harmonizing with the walls, which are green. The doors of the gallery are purple, green, and gold. The pilasters in the niches are painted Sienna marble, and on each is placed a bust of some one eminent in science, art, or literature. Portraits of Mr. William Rathbone, Mr. Fawcett, and Mr. George Holt, adorn the walls of the gallery. The columns of the organ are painted in imitation of jasper marble, with white parian caps and gold mouldings, and resting on a base of porphyry, with panels of Egyptian green marble. The pipes are blue and gold; the cornice and arch white, gold, and pink, with frieze of blue and white ornament. In the gallery front the balusters are buff and gold; the pilasters buff and black, with grey and red styles: the frieze is stone-colour, inlaid with pink panels and purple ornament, in gold moulding. The light iron columns which support the gallery are encircled with strapwork ornaments and have caps of white and gold. The seats have been stained and varnished, the pads painted, and the body-seats are to be cushioned. Hitherto the hall has been used only for the lectures and meetings of the institution; but in future the public will be allowed to have the use of it, the Directors having determined to let the room for concerts, lectures, and public meetings.

EXCESS OF MORTALITY DURING THE WINTER.

THE Registrar-General's last quarterly return says;—Seldom has a winter been more fatal; for 143,030 deaths, 1,572 a day, were registered in 91 days. The mortality was at the rate of 2·773 per cent.; whereas the average of the season in the preceding ten years was 2·490 per cent.; thus the rate was nearly 28, instead of 25, in 1,000. 14,698 persons died in excess of the average number. Since 1842 it is only in the two winters (1847-48) after the potato failure, and in the winter of the Crimean war (1855), that the country has experienced any higher rates of mortality. The winter death-rate per 1,000 was 2,850 and 2·794 in the former years, 2·910 in 1855, and 2·773 in 1864. In unhealthy places, and in England formerly, when the land was undrained, and when zymotic matter soiled the air and waters more abundantly than it does in these days, the mortality was highest in the hot months of the year; but in the last quarter of a century the summer diseases have to some extent subsided, and left the mortality highest in winter, when the cold weather, in some proportion to its intensity, cuts off the weakly and the aged. London suffered to an extraordinary extent. The average annual rate of the winter quarter in London is 2·577 per cent., but in the last winter quarter the rate becomes 3·088, or ·511 above the average. The funerals increased in the proportion of five to six.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION.

CHICHESTER CATHEDRAL.

AT the meeting held April 27th, Lord Houghton presided, and a large number of very interesting matters were exhibited, for an account of which we unfortunately have not space.

Mr. Gordon Hills, who was an eye-witness to the fall of the spire of Chichester Cathedral in 1861, as our readers know, called the attention of the society to some very curious particulars relating to the subject. He alluded to the prevalent opinion, supported by the historians Hay and Dallaway, that the north-west tower of the cathedral had been battered down in 1642 by Sir Wm. Waller, the Parliamentarian general. Mr. Hills showed that the destruction of the tower could not have taken place at that time; but the exact period of its occurrence was left in doubt. This doubt he has been able to clear up. The Rev. C. A. Swainson, canon of Chichester, has furnished Mr. Hills with the particulars derivable from a MS. in the handwriting of Dr. Thomas Haley, preserved among the archives of the cathedral chapter-room. Dr. H. was prebendary of Heathfield in 1704, canon residentiary in 1712, and dean in 1755. The MS. consists of a copy of the paper written in 1684, in Dr. Ede's handwriting, being "An

Account of Sir Christopher Wren's Opinion concerning the rebuilding of one of the great Towers at the west end of the Cathedral (one-third of which, from top to bottom, fell down about fifty years since), which he gave after he had for about two hours viewed it both without and within, and above and below, and had also observed the great want of repairs, especially in the great west tower." The report bears the date of 1684, the year in which Wren was by letters patent made Comptroller and Principal Officer of the Works in the Castle of Windsor. It shows that the tower fell about 1634. Sir Christopher actually proposed to clear away the ruins of the fallen north-west tower, and also to pull down the corresponding one in the south-west, and shorten the nave by one arch, and to substitute "a fair-built west end" of his own design; and it is satisfactory to think that the dean and chapter practised greater economy than the architect advised, and let it alone altogether, by which we are still able to look upon the south-west tower, though condemned a hundred and eighty years since.

The remainder of the evening was occupied in the reading of an elaborate paper by Mr. Geo. Warcing Ormerod, "On the Hut Circles of the eastern Side of Dartmoor," derived from long and continued examination and survey, difficult to explain without the numerous plans, drawings, &c., with which it was accompanied. It will form a useful pendant to Sir J. Gardner Wilkinson's papers on Dartmoor, already printed in the journal.

INSTITUTION OF CIVIL ENGINEERS.

At the meeting held April 26th, Mr. J. R. M'Clean, president in the chair, the first paper read was "On the Structure of Locomotive Engines for ascending Steep Inclines, especially when in conjunction with Sharp Curves on Railways," by Mr. J. Cross.

The second paper read was "On the Impedimental Friction between Wheel-tires and Rails, with Plans for Improvement," by Mr. W. B. Adams. The author thought that the chief source of destruction in rolling stock and permanent way, apart from disproportionate weight, arose from the blows and friction between the wheel-tires and the rails—that was, jumping and sliding. This conclusion was verified by the contrary results practically obtained on the main line of the North London Railway at Bow. He considered that the best mode of preventing the blow was to provide for elastic resilience immediately over the tire beneath the wheel, and immediately under the rail, taking care that the rail-joints were elastically supported by fishes of sufficient depth; a continuous elasticity which could only be obtained by discontinuous supports, as with the double-headed rail on an elastic base—the flat-footed and bridge rails with continuous supports not being adapted for it; and that the rail thus elastically supported should be in itself as rigid as possible. On the North London line, this desirable result had been obtained, by laying down longitudinal timbers on the ordinary cross-sleepers, and spacing the rail supports not on the cross-sleepers but between them; the cross-sleepers being packed, and the longitudinals unpacked, so as to yield elastic action. In a lapse of nearly two years and a half, the ordinary iron rails laid on this system were undamaged, and the cross-sleepers firm and unmoved, in marked contrast to the rails laid in the ordinary rigid way.

LONDON MAIN DRAINAGE.

At a recent meeting of the Metropolitan Board of Works, the engineer (Mr. Bazalgette) reported that, at the present time, about one-sixth of the metropolitan sewage was intercepted by the Northern Outfall Sewer works, and discharged into the Thames at ebb tide at Barking, whence it was carried to the sea. This sewage, about 14,000,000 gallons in quantity, was formerly discharged into the river within the metropolis at low water. The progress made with the Main Drainage works was thus stated.—On the Main Drainage Middle Level Sewer, work to the amount of 306,000*l.* had been done; on the Western Sewers, 3¾ miles of sewer had been constructed at the cost of 51,000*l.*; at the Northern Outfall Reservoir works had been executed to the estimated cost of 163,000*l.*; at the Southern Low Level Sewer, 3¾ miles of work had been completed at the cost of 110,000*l.*; at the Southern Outfall works at Crossness, work to the amount of 213,000*l.* had been finished. With respect to the Northern Thames Embankment, the engineer reported that the works of the first contract, (from Westminster-bridge to the east side of Cannon-street) had been much delayed by the difficulty in obtaining possession of the wharfs on the side of the river, and by the necessity there was for making experiments as to the best form of iron caissons for excluding the tide. Works had been done on this contract to the amount of 30,000*l.*, and on the second contract (between Waterloo-bridge and the eastern side of Temple-gardens) to the value of 12,000*l.*

ST. JOHN, NEW BRUNSWICK.

WITHIN the last four years, New Brunswick, and more particularly St. John, has been making a marked progress in architecture. In the country, numerous summer residences, and some churches, of a good though simple style,—Gothic modified to suit the climate of the province,—have been erected, and each year adds to the number. Near St. John, the residences of Mr. William Thompson (Mr. Stead, architect) and Mr. T. W. Daniel (Mr. J. A. Munroe, architect), are perhaps the best.

In the city, the new Roman Catholic Cathedral (Transition) and the bishop's residence (Perpendicular), are the best specimens of Gothic; and the stores of Messrs. Doherty & M'Tavish, Hall, and M'Cullough (Mr. Stead, architect), and Messrs. Ennis & Gardner, Ray, and Beard & Venning (Mr. Munroe, architect), of Italian. Some good residences and public buildings are scattered over the city. The new buildings are generally either of brick or stone, wood being used only for small houses.

The St. John gymnasium, in course of erection, is the first of the kind in the province. Mr. Munroe is the architect. The building is 40 feet front by 100 feet deep, and is built of wood; and, when finished, with baths, closets, sinks, &c., will cost 3,000 dollars (about 600*l.* sterling). The heating apparatus will consist of pipes for steam running around the building.

Our correspondent writes,—"The great evil we have to contend with is remodelling old buildings with stories 8 feet high. All St. John wants, to make it second to none of the colonial cities, is large fires; for people would rather spend 2,000*l.* on an old shanty, than build a new building for 1,800*l.* We have just established a school of design: it numbers some thirty members, intelligent mechanics of different trades, and is rapidly increasing in popularity."

NEWS FROM SCOTLAND.

Elgin.—An extensive and improved farm-steading has been erected at Drumbain, near Rothes, on the road from Elgin to the Spey Valley. The new steading is built on the site of the old one; but it covers so much more ground that it has been necessary to make an excavation, to the depth of 8 or 10 feet, into the hillside, in order to preserve the level of the foundation. The steading, as fully described in the *Elgin Courant*, may be said to consist of three squares joined together. First, there is the principal square built into the hill-side. This division contains the mill and barns, the granary, stable, cart-shed, and other offices. Next, there is a square in the same line containing the byres and the dung court; and, running back at right angles from this, are the cattle-sheds and courts for the accommodation of young stock. All these divisions are slated with very fine blue slate, and they differ in height according to the purposes which they are intended to serve. The first division is a story and a half high, with the exception of the thrashing-mill, which is two stories in height. This division measures 115 feet in length by 109 feet in breadth outside the walls, and contains inside a clean court 66 feet by 73 feet. The entrance to this court, and to the offices ranged round it, is by a gate 11 feet wide and 7½ feet in height. Going into this court, which is as well paved and as clean as the best streets in some cities, the stable is on the right, the cart-shed on the left, and the thrashing-mill and straw barn in front. The stable contains thirteen stalls, and is fitted up with the utmost regard to the convenience of the horsemen and the comfort of the animals. It is lighted with moderator lamps and paraffine. The lamps are enclosed in glass lanterns as a security against fire, and are balanced on pulleys from the joisting, so that the light may be moved up high or brought down to the floor if required. There is a plentiful supply of water brought in pipes to every part of the steading. It is introduced into the stable, outside of which there is also a large watering-trough for the use of the horses. Each man is provided with a chest to hold his horses' corn under lock and key; and in the angle of the stable, which occupies a side and a-half of the square, there is a harness-room, where every man has a trace on which to brush up his horses' harness. Immediately above the harness-room, and approached from it by a stair, is the ploughmen's sleeping apartments, which are ceiled and plastered. There are a bed-room and a dressing-room where the men may keep their clothes and dress themselves. A supply of water can at any time be had from a pipe which is introduced into this room. The sleeping-room, while it is made as comfortable as a place of the kind could well be made, is so constructed that if any of the horses should make a noise during the night, the men have only to open a small window looking down on the stable to satisfy themselves of what is wrong. The straw barn will hold at least 120 quarters of straw. It is 18 feet in width by about 60 feet in length, and, with a story and a-half of walls, is open up to the apex of the roof.

Wick.—The works in connexion with the new harbour are now advancing. The service railway from the quarries to the breakwater is almost completed, and a great quantity of plant and machinery is laid down to be ready for operation. Already about 200 feet of the breakwater have been laid down, and the staging on which the waggons are to run for pushing it seaward is erected for that distance. It is expected that other 600 feet of the work will be finished during the season.

Slateford.—The Free Church here, which was built only two years since, has been completely destroyed by fire, which (as usual) originated in the stove, communicating, it is believed, with the woodwork in a corner of the gallery. The building was insured to the extent of 500*l.*

COMPETITIONS.

The Southport Cemetery.—The Improvement Commissioners of Southport have awarded the first premium to the plans sent in by Messrs. Blackwell, Son, & Booth, architects, for the laying out of the intended cemetery at that place, and the erection of the necessary buildings. The principal entrance to the cemetery is in Duke-street, and is flanked on one side by a residence for the superintendent, and on the other by a porter's lodge. The extent of the cemetery is about 9 acres. Two semi-detached chapels, for the Noncomformists and the Church of England, are placed in the centre of the plot, and are approached directly from the principal entrance; whilst, immediately on entering, a winding road conducts to the Roman Catholic chapel, which stands on the south side of the plot. The semi-detached chapels are divided by a clock tower about 50 feet in height, on both sides of which are vestries leading to the chapels; and on the other side of the vestries are entrance porches for mourners. In connexion with each chapel is a mortuary for the reception of the coffins, and this is divided from that portion of the chapel occupied by the mourners by glass folding-doors, which will admit of the coffins being seen. The style of architecture adopted for the lodges is domestic Gothic, and that for the chapels is Continental Gothic.

Hackney Town-hall.—In the *second* competition for this building only four designs, according to the *Hackney Independent*, were sent in. From these a design by Messrs. Hammack & Lambert has been selected.

IRELAND.

The Clonmel School of Art.—This school has just been visited by Mr. Moodie, an officer from the Science and Art Department, and the students have undergone the usual examination. The inspector expressed his surprise at the low attendance at the school, especially of the artisan class. He stated that in England the artisans were most assiduous in their attention to the schools of art, as the knowledge there afforded was sure to advance them in their various employments, and thus procure for them a higher

ate of wages. He was sorry to perceive that he same influence did not appear to actuate the rish artisans. Mr. Moodie also remarked on he indifference to art education, exhibited by he friends of the elementary schools, where, notwithstanding the great encouragement afforded by the Department, only one school, hat is the Model School, was in connexion with he school of art. Alderman Hackett informed he inspector that the success of a school of art n Clonmel was much hindered by the absence f manufactories, and of the consequent demand or the service of the designer and draughtsman, nd that at present the artizan class were suffer- ng from a scarcity of employment in the various lepartments of buildings, so that many were eaving the country.

The National Model Schools.—A Parliamentary aper, moved for by Mr. Pollard Urquhart, M.P., contains tabulated details respecting twenty-even model schools. The expenditure on the entral model schools is omitted, as also that on he West Dublin model schools. The aggregate xpense of the other twenty-five establishments s 136,315*l.*, or an average of 5,452*l.* each, the Belfast model school having cost 12,453*l.* The twenty-seven model schools in operation cost 30,971*l.*, or an average of 1,147*l.* each, the cost of the larger establishments standing thus:—Central model, 3,416*l.*; Belfast, 4,516*l.*; Londonderry, 1,044*l.*; Newtownards, 1,606*l.*; West Dublin, 1,305*l.*; Limerick, 1,255*l.*; Galway, 1,246*l.*; Waterford, 1,020*l.*; and Trim, 1,007*l.* During the year 1863 the number of different pupils that passed through the schools was 16,768,—3,214 in the central model school, 2,805 in Belfast, 1,054 in West Dublin, and 105 in Enniscorthy. The daily average attendance ranges from 1,388 in the central model, 1,215 in Belfast, 427 in West Dublin, to 95 in Sligo, and, lower still, 52 in Enniscorthy.

PROVINCIAL NEWS.

Andover.—Mr. Gue, of this town, builder, has obtained the contract for building the new London and County Bank in the High-street. The sum agreed upon is 1,959*l.*

Penzance (Cornwall).—The chief stone of the Penzance Public Buildings has been laid with some ceremony.

St. Ives.—The following tenders have been received for the erection of the new Corn Exchange on the Market-hill. Mr. Hutchinson, the architect, was instructed to have the work commenced immediately:—

Allen	£2,177 0 0
Cock & Jenkins	1,790 0 0
Saunders	1,685 0 0
Thackeray & Son	1,527 0 0
Thompson	1,520 0 0
Allpress	1,433 0 0
Bunting & Son (accepted)	1,409 0 0

Messrs. Bunting & Son have commenced operations by pulling down the buildings purchased for its site.

Hereford.—A building at the cathedral-end of King-street, formerly in the occupation of a cabinetmaker, has been restored in the olden style of such buildings in Hereford, with external carvings and ornamental mosaic work in the windows and balcony. In Gwynne-street, adjoining, also, some street improvements have been carried out. The whole of these works have been done by Messrs. Ford, from designs by Mr. E. H. L. Barker.

LABOURERS' COTTAGES COMPETITION.

SOCIETY OF ARTS.

THE following is the report of the judges appointed to decide on the competition for prizes for designs of cottages for the labouring classes, offered by Mr. J. B. Denton, through the Society:—

"After a careful consideration of the designs submitted to us, numbering in all 134, from 107 competitors, residing in all parts of the United Kingdom, we feel it incumbent on us to offer a few remarks in explanation of our decision.

We would observe, in the first place, that although the terms of the competition are such as to limit our attention rather to small matters of detail, affecting the stated cost, than to permit our actually selecting the best design which could be built for a reasonable outlay, we have given our consideration to the whole subject of cottage accommodation for the labouring classes.

Notwithstanding that the offer of these prizes has been the means of procuring so large a number of designs, we cannot but consider that no satisfactory solution of the problem proposed has been given. The possibility of erecting really good and substantial cottages for the labouring population of this country generally, with the stated accommodation, at a cost not exceeding 200*l.* a pair, all profits and expenses included, is not demonstrated by the present designs. This is shown by the remarks of the competitors themselves, and by the shifts they have found themselves obliged to adopt in order to reduce the cost, as well as by those exceptional cases where, owing to some peculiarly favourable circumstances, or by omitting some feature not so important in one locality as in another, a result somewhat approaching that which is desired in the cost has been arrived at; not in any case, however, without contravening the terms of the competition in reducing the given prices of certain items.

We particularly mention good and substantial cottages of the given dimensions, for it is to such alone that our attention has been directed, as it cannot be the desire of the donor of the prize, or the wish of the Society of Arts, to encourage the erection of cottages of an inferior character. We have in all cases taken the cost of cottages to be erected in pairs, it being obvious that a better building can be provided for a stated sum when attached to a similar one, and thus the cost of some of the walls, roofs, &c., divided between the two. On the other hand, the cost of a row of ten pairs of cottages can hardly be taken as a fair criterion of the value of a single pair, a group generally much more frequent and desirable than the larger number.

Several items are included in the terms of the competition which we think should have been more clearly defined or excluded altogether from the estimate; for it is obvious that the words "water supply, well, fencing, paving, &c.," may be taken to imply very different items of expenditure by different individuals in a competition. Again, while brickwork as a material for walls of cottages is almost unknown in some parts of the country, it is obvious that rubble walling must be reduced to value in the terms of brickwork to get at a fair comparison of the cost according to the terms of the competition; and similarly, roofing, if of tiles, must be valued as slates at the given price.

The paragraph referring to the height of rooms seems to have been differently understood by the competitors, the word "clear," at the end of the sentence relating to this matter, having been taken by some to mean the height of the ground-floor up to the ceiling, while the generality of designs allow only 9 feet, including the thickness of ceiling, upper floor joists, and flooring.

It is true that in some parts of England, where bricks can be obtained at from 18s. to 20s. a thousand on the spot, and where certain facilities exist for obtaining other materials, where timber is inexpensive and concrete foundations are scarcely required, a certain kind of cottage may possibly be erected for the sum named in the instructions (though generally speaking it is not so), but it would be highly improper, without the addition of considerable improvements, at increased cost, to recommend such cottages as fit to be erected for the occupation of the labouring classes generally.

Of all the plans submitted, therefore, none can be said strictly to conform to the terms of the competition, both as to the accommodation required and the cost. To none, therefore, can we, strictly speaking, award the prize. We, however, deem the design marked by you as No. 23 to be, on the whole, the one most conformable to the terms of the instructions, as well as to the proper requirements and conveniences of a labourer's cottage, and, therefore, we recommend that the prize of 25*l.*, open to the United Kingdom, be awarded to this design.

It must be understood as our opinion, however, that, generally speaking, brickwork of 9 inches thick for outer walls in exposed situations is not sufficient to resist the weather, and therefore we should recommend some system of hollow walls to be adopted, which would of course add to the cost. With reference to this we would call attention to the remarks of a competitor (No. 71), to which we quite assent. He proposes to build the cottages shown in his design in 9-inch solid brickwork, the stipulated cost not allowing him to make them of greater thickness, and adds, 'Should it be thought advisable to increase the expenditure for this purpose he would recommend hollow walls built in brickwork, the space between being 2½ inches, and the walls bonded together with wrought-iron ties.' It is only fair to observe that several other competitors (as Nos. 2, 14, 30, 81, and others) show various systems of hollow walling, or some kind of hollow bricks.

Though not specially mentioned in the instructions, an oven is, we consider, often a matter of importance; and, if made common to both cottages (as in Design No. 71), may be added without any great expense.

We cannot recommend the ordinary water-closet apparatus with cistern-pipes, &c.—so liable to get out of order—for general adoption in ordinary labourers' cottages. A modification of this by the use of a common syphon pan, with the ordinary privy or cesspool, will be found sufficient; and when, by means of ashes, clay, or other deodorising substances thrown into the pit, the loss of the soil is prevented, the matter is not unimportant.

The use of cast-iron casements, as in Design No. 23, is not desirable, owing to the difficulty of making and keeping them water-tight, their liability to fracture, and the difficulty of repairing them. We should recommend sashes or casements in wooden frames, and no lead lights for other than ornamental purposes.

The internal walls of some of these designs are not plastered, thus evincing an attempt to save cost. Perhaps, in some cases, with very good bricks, and in certain localities, plastering may not be required; but, generally speaking it is desirable to plaster the bedrooms and living rooms of cottages.

In some of the designs the living-room floors are described to be common flat brick paving. Good paving tiles at least should be used, but we consider wooden floors, for the living-room as well as the bedrooms, generally indispensable to the comfort of the inhabitants.

The Design No. 23 shows well-ventilated pantries and good coal-stores; also a well, common to both cottages, and a rain-water butt.

The partitions shown in some designs (particularly No. 71) in the upper floors, of ½-inch boarding only, are not sufficient except, perhaps, next the staircase. The separation between the rooms should be of a more substantial character.

Design No. 23, to which we award the chief place, would be greatly improved by dormers over the upper windows at the back, so as to give greater space for light and air to, as well as to improve the appearance of, the cottage.

In all cases when the sloping parts of slate roofs especially (and generally also of tile roofs) are made a portion of the ceiling of the upper rooms, some plan should be adopted to check the access of heat and cold.

It is stated that cottages of the same design as No. 31 are being erected in large numbers in Yorkshire at a cost within the amount stated in the terms of the competition; but we find in the estimate that the brickwork is taken at 6*l.* a rod instead of 8*l.*, as in the instructions, and other work at proportionately low prices.

With regard to the prize offered specially to the members of the Architectural Association, the number of designs sent in is small in comparison; and we regret to observe that the attempt to conform strictly to the terms of the competition as to cost, seems to have led to the sacrifice of essential conveniences and comforts, although there is no design which we can say has successfully met the instructions even in this respect. Either in substituting tiling at a flat pitch for slates, or by reducing the heights of some rooms, or placing the water-closet inside the walls of the house, or in some other way, attempts have been made to meet the instructions, which only serve to preclude the possibility of our recommending any of the designs submitted for the prize, or of according to them our commendation as generally fit to be adopted as dwellings for labourers, without a variety of improvements.

We would observe, however, that No. 15 offers a suggestion deserving of remark, as it submits a plan with one of the bedrooms on the ground-floor, whereby the size of the upper rooms is increased and the boys and girls of the family are more completely separated. Only one door to the house is provided, and the scullery is reduced in size. This plan obviates in a measure the difficulty arising from the area required for the upper floor of a cottage with three bedrooms on that floor generally exceeding the area actually required on the floor below. Such an arrangement as this may be desirable in some localities, but it is not contemplated in the instructions. This design is shown as roofed only with pantiles at a low pitch. The general plan of No. 29 is, upon the whole, good; but the elevation as shown cannot be commended, unless the improved elevations, as sketched in the alternative design, were adopted, which would then bring the cost considerably beyond the stated sum.

In fine, we may observe that although good cottages may possibly be erected, under favourable circumstances, in some parts of England for a lower sum, we consider the probable average cost of a pair of cottages built with the conveniences we have enumerated would be about 300*l.*, to 360*l.*, and that the attempt to erect them at any considerable reduction upon this amount must result in some inferior kind of buildings, discreditable to the owner, and wanting in much of the necessary accommodation for a labourer and his family.

We would further remark, in conclusion, that there are other advantages besides the mere per-centage on the outlay which must be looked for to remunerate a cottage builder for his expenditure on improved dwellings,—advantages nevertheless capable of being estimated at a pecuniary value, such as proximity of the labourer to his work and consequent saving of time, &c., amounting often to quite as much cash value as half the rent of the cottage; but especially the moral and physical welfare of the tenants, and the proper sanitary condition of their dwellings. These latter considerations, after all, are those which give so great an importance to the subject, and which have prompted us to give especial attention and care in deciding what may at first sight seem but a simple matter.

(Signed) C. F. HAYWARD, Architect.
G. DINES, Builder.
J. CLUTTON, Land Agent."

The name of the successful competitor (No. 23) is Mr. John Birch, 51, Holywell-street, Westminster, to whom the Council have awarded Mr. Denton's prize of 25*l.* and the Society's silver medal, in accordance with the above recommendation.

COMPETITION, NEW MUSEUMS, SOUTH KENSINGTON.

WHILE the decision of the committee was in abeyance in this competition, it was, perhaps, as well to abstain from remarks on the subject of the infringement of the conditions with respect to the finishing of the drawings, because it might have been expected that the extent to which this has been carried in the first premiated drawings, in colouring instead of light brown Indian ink, could scarcely have escaped their attention.

It is not, of course, that the mode of finishing affects the merits of a design, *per se*; but it gives a most unfair prominence frequently to mere pretence and meretricious ornament over more meritorious and modestly finished drawings.

Without descending to the more minute though important process of lighting, which a very cursory inspection of these drawings shows to be exceedingly defective, there are two points which deserve especial remark.

First, that from the vagueness of the instructions, and the authorities simply referring back to them, such of the competitors as asked for further information, the difference of opinion as to the intentions of the Government was such, that while some of the competitors, including the first premiated, went in detail into the scheme for the whole site, and gave "full" perspective views of the principal front next Cromwell-road, 1,100 *feet long*, a large number believed themselves restricted by these instructions to the eastern side of ground only, and gave "full" perspective views of the façade, 600 *feet long only*, next Exhibition-road. Between designs so circumstanced no fair comparison could by any fair possibility be instituted.

Secondly, and it is a point of great importance to the Government as well as to the competitors, the instructions restrict the Natural History Museum to the *eastern side* of the site only, and clearly imply that it must be self-containing within those limits. Now as Captain Fowke places the lecture-hall, library, and even the entrance-hall, in the *central block* and on the *central axis* of the building, either the Natural History Museum must be constructed *without* these necessary appendages, or the Government, by commencing at all, commits itself at once to the whole scheme, and to a building which cannot be completed under 1,500,000*l.* The instructions clearly imply that they are anxious to avoid this necessity.

The modifications exhibited are equally illusory; each consisting in leaving out some essential point; *e.g.*, the *museum* without the *library, lecture-hall*, or even *entrance-hall*, or these *without* the *museum*. Now, the very essence of a modification consists in this, that though reduced in size, it is complete and self-containing in itself.

It is inconceivable how the committee can have overlooked these points.

AN ARCHITECT.

THE COFFIN OF EDWARD THE CONFESSOR.

THE following very interesting entry—relating to one of the most eminent of our Anglo-Saxon kings—has *never before been published*, nor referred to, nor ever imagined to exist. I found it (some seven years back) in the Accounts of the Paymaster of Works and Buildings, belonging to the Crown, during the reign of King James II.: -

"Paid to Mathew Bankes, for a large coffin by him made to enclose the body of St. Edward the Confessor, and setting it up in its place, in the year 1685,—6*l.* 2*s.* 8*d.* And to William Backe, locksmith, for large hinges and rivetts, and 2 crossebarrs for the said coffin,—2*l.* 17*s.* 7*d.*"

Lord Macaulay would doubtless have made use of this illustration of the religious character of the last of our Stuart kings—as he would have made like admirable use of the removal, by King William III., of Grinling Gibbons's Whitehall Chapel altar-piece—from Inigo Jones's Whitehall to the position it still retains in the Chapel of Hampton Court Palace; a fact alike significant and important, which I had the good fortune to discover and to make first known to the public in the columns of the *Builder*.*

"I have seen" (says Keepe) "a large chest or coffin, bound about with strong bands of iron, lying about the midst of the inside of this shrine, where I suppose the body of the pious Confessor may still be conserved." Keepe's work was published in 1681; and four years after, at the taking down of the scaffolding, erected for the coronation of James II., a hole was either accidentally or purposely broken in the lid of the Confessor's coffin. "On putting my hand into the hole" (says Keepe), "and turning the bones which I felt there, I drew from underneath the shoulder-bones a crucifix, richly adorned and enamelled, and a gold chain, twenty-four inches long." The crucifix and chain of the *last but one* of our Saxon kings were accepted by *the last* of our Stuart kings. Their destiny is, I believe, unknown.

This is the whole account we have of this discovery and its appropriation—a passage in "Bishop Patrick's Autobiography" (p. 191) excepted, with which, however, I will not trouble your readers.

PETER CUNNINGHAM.

SCULPTURE EXHIBITION AT THE ROYAL HORTICULTURAL GARDENS.

SIR,—As a letter addressed to the Sculptors' Institute by the Royal Horticultural Society, the original of which I received only on the 3rd instant, was inserted in your paper of last week, I deem it my duty to state that the reason why the Sculptors' Institute have thought proper to withdraw their support from the proposed exhibition of sculpture is, that the arrangement propounded to them in the first instance by the late lamented Prince Consort, and carried out last year, has been abandoned by the authorities of the Gardens, and a code of rules substituted of a character not in accordance with the views of his Royal Highness.

EDW. B. STEPHENS, Hon. Sec.,
Sculptors' Institute.

NEW PATENT DIRECT-ACTING STEAM-HOIST.

A NEW machine, for the purpose of raising weights, driving piles, and general hoisting purposes, has been tried at the works of Messrs. Peters, Brothers, Portwood, in the presence of gentlemen interested in this class of machinery, and of engineers from London, deputed to report upon the merits of the machine, which is the invention of Mr. A. B. Brown, C.E., of the firm of Scott Burn, Brown, & Co., of London. Most of the ordinary loss of power is avoided, the only wearing parts being reduced to a piston and piston-rod. Steam is admitted from a small tubular boiler, into the cylinder at a high pressure, and is thus permitted to exert its expansive force directly upon the rope by which the weight is raised. The whole machine, is portable and upon wheels. In one of the trial experiments, weight, being at once freed from all resistance, fell at the natural velocity, and descended like a blow from a hammer. The weight lifted was 5 cwt., the speed 900 feet per minute, the indicated pressure of steam 70 lb. to the square inch. Eleven blows per minute upon a pile were represented; and it is the opinion of the inventor and constructors that, with a larger steam-producing surface, a speed of from eighteen to nineteen blows could be obtained. The concluding part of the trial was to display its power as a general hoist for warehouses, wharfs, mills, and other manufactories. The operation of the machine itself is reported as almost without noise. The trial was considered satisfactory.

* *See* the *Builder*, Nov. 8, 1862, p. 793.

CHURCH-BUILDING NEWS.

Cambridge.—The chief stone of the new chapel of St. John's College has been laid. The chapel has already progressed considerably. The architect is Mr. G. G. Scott. Messrs. Jackson & Shaw are the contractors.

Thetford.—The church in this hamlet is now completed, after restoration and re-seating, and will shortly be re-opened for divine worship. The work has been carried out by Messrs. Freeman, of Ely, as contractors, from designs of Mr. J. Ready, of London, and the cost will be defrayed entirely by the family and friends of the rector, the Rev. H. H. Baber, of Stretham.

Stow.—Operations have at length been commenced for the necessary repairs required by the state of Stow Church. The work has been resumed at the point where the restoration of the choir left it twelve years ago, viz., with the Saxon piers of the tower next the chancel. As the work to be done is of a nature which does not admit of its being let to a contractor, careful workmen are employed in carrying it on under the eye of the incumbent, with the assistance of the architect and a clerk of the works. Some liberal donations have recently been added to the restoration fund from influential persons in the county.

Harleston.—The roof of the chancel of Redenhall church, which was in a somewhat decayed state, has been replaced by a new one, of similar design as the original, which belonged to the Decorated period. The whole has been executed in English oak by Mr. C. Godbolt, of Harleston, under the superintendence of Mr. R. M. Phipson, architect. A debased window, altar railings of the staircase balnster style, and a west gallery blocking up the lower arch, still exist; but these will gradually give place to better things.

Bedford.—The first meeting of a general committee for the restoration of St. Paul's church, Bedford, has been held at the Shirehall, according to the local *Times*, when resolutions were passed to the effect that the present condition of the church renders it highly desirable that steps should be at once taken with a view to its complete repair and restoration;—that to carry out such restoration a considerable expenditure must necessarily be incurred, towards which a sum of about 1,000*l.* has been already promised;—and that Mr. R. Palgrave, jun., be appointed architect. A working committee was appointed to carry out the objects contemplated.

Newbury. — A new chancel is about to be erected to St. John's Church, Stockcross. This church was erected about twenty-five years ago. The chancel at present is only about 7 feet deep, by 15 feet wide: it will be when completed 27 feet deep, by 18 feet wide. The plans have been prepared by Mr. Hyllier; and Mr. Low, of Speen, by whom the church was built, has taken the contract for this extension.

Llanelly.—A new Welsh church is about to be built on Glanmor Park estate, near the seaside, Llanelly.

Liverpool.—The foundation-stone of the Church of St. John's has been laid at Waterloo. The new church, according to the *Journal*, is to occupy a triangular piece of land at the upper part of Wellington-street, Waterloo North. The building will be of a simple and comparatively inexpensive character—the architecture being early English. Externally the church will be built of Yorkshire shoddy, with Stourton-stone dressings. The roof will be pointed, and the only addition in the way of ornament is a small bell turret which surmounts the west gable. The church is intended at first to accommodate about 600; but, when required, enlargements can be made by the addition of north and south transepts, which will accommodate about 300 more. The dimensions of the nave are 62 feet by 37 feet, and of the chancel 30 feet by 20 feet. The roof will be of open timber-work, stained and varnished, of one span. Mr. Culshaw is the architect, and the building contract has been left to Mr. T. Smitton, of Seaforth. The total cost of erection and endowment is estimated at 4,200*l.*

Books Received.

Engineering Facts and Figures for 1863. *An annual Register of Progress in Mechanical Engineering and Construction.* Edited by ANDREW BETTS BROWN, Mechanical Engineer. London and Edinburgh: A. Fullarton & Co., 1864.

THIS book is a product of the noble art of wielding the scissors and paste-brush. It is a reprint of selections from the articles published last year in the *Engineer*; the *Mechanics' Magazine*; the *Practical Mechanics' Journal*; the *Engineer and Architects' Journal*; the *Chemical News*; the *Scientific American*; and the *Builder*. The compilation of these so-called "engineering facts and figures for 1863" must be founded upon three assumptions;—first, that Mr. Brown's sources are ever-running streams of facts; second, that the figures are always given; third, that engineering progress is completely recorded in the more or less ephemeral class publications of the day. Is this so? The editor's name would give one the impression that the tinge of his intellect is that of the autumn leaf—when, as Kingsley sings, "all the trees are brown." We should be inclined to assert that his predispositions are of a more youthful kind, and are of the present joyous season of the year (Gioventu—primavera della vita; primavera,—gioventu del anno):—

> "When all the world is young, lad,
> And all the trees are *green*;
> And every goose a swan, lad,
> And every lass a queen,"
> * * * * *

But, instead of taking to boot and horse like the hero of Kingsley's lively and yet pathetic lyric, Mr. Brown rushes to the paste-brush and scissors. At the same time let us say that the articles chosen are very well selected from the special point of view of a mechanical engineer, and make a tolerably useful book. We notice, however, several misprints, which slightly alter the sense. Several names of foreign scientific grandees are also misspelt; *e. g.*, "Poncelef" for Poncelet; "Depretz" for Despretz; "Ruhlmann" for Bühlman (a very great difference to a German); and some other similar slips. For Mr. Brown's own sake, we advise him to spend his leisure hours with the true sources of mechanical knowledge; to, in one word, devote his time to getting up *one* subject well; and then, and not till then, to rush into print.

VARIORUM.

"HEROINES of the Household," by the author of the "Heavenward Path" (Hogg & Sons). This is a very interesting series of sketches of noble women of ancient and modern days, ranging from Monica, the mother of Augustine, to Miss Marsh, whose labours amongst the navvies will not soon be forgotten. It is well calculated not merely to interest young readers, but may suggest what many would gladly find,—a path of usefulness.——"The Steady Aim," by W. H. Davenport Adams (Hogg), is another book of examples and encouragements from modern biography. The author has found his subjects amongst all classes, inventors and discoverers, naval and military heroes, artists, authors, and men of commercial enterprise, choosing those who have become great by the adoption of a particular path in life, and following up that path with unfaltering resolution. It is useful to remember that,—

> ——"The virtue lies,
> In the *struggle*, not the *prize*."

——"Chasing the Sun," to name another reading book that has reached us (published by Nisbet & Co.) forms part of *Ballantyne's Miscellany*, the very good object of which we have previously mentioned. The present little volume describes familiarly some rambles in Norway.——The current number of the *Quarterly Review* contains an article on "Pompeii," founded on the reports of Signor Fiorelli, now at the head of the Royal Museum, and who was previously director of the works at Pompeii. Accounts of the more recent discoveries which have reached the English public only through the journals, are brought together, and their value is made evident. To check the habit of writing names upon the walls, Signor Fiorelli has ordered all names thus written to be published in the Naples paper which has the largest circulation. The *Quarterly* says, "he has been requested to furnish a list of those of our own countrymen, that they may be similarly exposed to public reprobation at home"!

Miscellanea.

Manslaughter by Artificial Manure Manufacturers. — An inquest has been held, in Wolverhampton, on the body of a young married woman, who lived near to the chemical and artificial manure works, in that town, of Messrs. Wildsmith & Gaunt. The deceased had complained several days of sickness and huskiness in the throat, caused by the sulphurous vapour arising from the works. Medical men were called in, and they found the house surrounded by a vapour of a peculiarly acrid taste. This they pronounced to be sulphurous acid gas given off from the works; and a *post mortem* examination revealed that the deceased died of inflammation of the lungs, which Dr. Henry Hancox, surgeon, who made the examination, believed was accelerated by the woman having inhaled the vapour in question. The jury returned a verdict of "manslaughter" against Messrs. Wildsmith & Gaunt, and those gentlemen were committed for trial, but admitted to bail. Previously the Corporation of Wolverhampton had commenced proceedings against them by indictment.

The Value of House Property in South London.—The following properties were recently submitted to public competition at the Mart, City, by Messrs. Charles & Henry White, auctioneers, of Kennington-cross, and after some spirited biddings were sold at the following prices:—Leasehold residence, 21, Trinity-square, Southwark, let at 35*l.* per annum; ground-rent, 12*l.* 1s. 6d.; unexpired term, 31 years, sold for 295*l.* Leasehold residence, 22, Trinity-square, Southwark, rental 42*l.* per annum, held at same ground-rent and term as above, sold for 300*l.* Two leasehold dwelling-houses, situate Nos. 1 and 2, Cottage-place, Vauxhall, Lambeth, held for about twenty years, at a net rental of 16*l.* 6s., sold for 75*l.* Twenty-five leasehold dwelling-houses, in Harris-place, Harris-street, Camberwell, let to weekly tenants at rents realising 260*l.* 8s. per annum, after deducting ground-rent, vendor paying taxes, held for an unexpired term of 76 years, sold for 1,750*l.*

Drainage of Salford.—A report on this subject by Mr. John Newton, C.E., Preston, to whom plans and reports of the borough and district surveyors had been referred by the Drainage Committee of the Salford Corporation, has been printed. Mr. Newton examined the locality previously to making his report, which is not in entire accordance with the recommendations of the borough surveyor; but the reporter urges the necessity of such works as those advised by the surveyor, or modifications of them, or others in lieu thereof, being forthwith undertaken, on sanitary grounds; the rate of mortality in the Salford district being excessive, and sanitary measures invariably resulting in a reduced death-rate. We regret to observe, however, that all idea of carrying out a great drainage scheme for Salford is abandoned. The objections urged in the council were two-fold—firstly, that the purification of the Irwell cannot be effectually carried out unless the co-operation of Manchester is secured; and secondly, that the allotment of the cost to the several districts of the borough was unequal and unfair. The proposed new works would, in all, have cost 39,374*l.*; of which 26,672*l.*, were for works to intercept the sewage from the Irwell and convey it to a proposed outlet away from the town, near Mode Wheel.

The Oswestry New Public Hall and Institute.—This building, which has recently been opened, stands on a site adjoining the New-road, not far from the railway stations. The front has a total extent of 50 feet. At the angle of the building rises a square tower to a height of 60 feet. The architecture is Italian, of a Florentine character, the effect depending chiefly on the treatment of the main cornice, the doorway, and the window-dressings. The materials used are stone from quarries at Shelvoke, and red pressed bricks jointed in black mortar. The sides of the building are of red brick, with white brick arches, and are relieved a little by a red brick cornice. They have a total length of 86 feet. The large hall, which occupies the upper floor, is a plain room, 36 feet in width by 83 feet in length, and 21 feet in height, and is capable of accommodating 700 persons or more. The architect was Mr. W. H. Spaull, of Oswestry; and the builder, Mr. R. Whiston, of Wolverhampton. The total cost of the building, with boundary-wall and fencing, which were not comprised in the first contract, will be about 2,050*l.*

Opening of Roman Catholic Cathedral, Northampton.—The "Cathedral of our Lady and of St. Thomas of Canterbury" has been opened with the celebration of Pontifical High Mass, the preacher being Cardinal Wiseman. Mr. Pugin was the architect. The cathedral consists of a nave and north and south aisles or chapels. Over the high altar is a stained-glass window, representing our Saviour in the centre, with "our Lady" on the left, and "St. Thomas of Canterbury," to whom the church is dedicated, on the right. In the tracery of the window is our Saviour in heaven, and the lower part of the window is a representation of the old town of Northampton. The south chapel contains the sacramental altar, and the north is a memorial of the Japanese martyrs. There are several stained-glass windows and sculptured groups in the church, which is estimated to contain about 600 persons.

The Iron Works at Ashton Vale, near Bristol.—A new company is being formed for conducting the Ashton Vale Iron Works, and producing iron in a finished state, fit for the home or export markets. For some time operations have been carried on at Long Ashton, but the facilities for the complete production of iron have been awanting; the rough material, or pig-iron, being sent to Staffordshire and South Wales to be manufactured, at a total cost, including carriage each way, of from 14s. to 15s. per ton. It is now proposed, by a limited liability company, to introduce a large capital, and, by erecting the necessary apparatus, rolling mills, &c., to produce iron in a complete and finished state at Long Ashton, fit for supply to the iron market. The property comprises a colliery, and the means of raising the coal. The estimate of money required to erect mills, and to purchase and further develop the works, is 110,000*l.*

Railway Returns.—The course of British railway revenue this year has been highly satisfactory. In the first quarter of 1864 the receipts were 7,102,378*l.*, as compared with 6,534,829*l.* in the corresponding three months of 1863, showing an increase of 567,546*l.*, or 8·67 per cent. The average extent of railway worked during the quarter was 11,151 miles, against 10,752 miles in the corresponding period of 1863, showing an increase of 399 miles, or 3·71 per cent. The receipts thus gained on the mileage during the past quarter to the extent of 4·96 per cent.

Dupa's Patent Bench Dog.—The bench dog manufactured by Messrs. Bailey & Co., of the Albion Works, Salford, appears to offer advantages over the primitive mode of securing a piece of wood on the carpenter's bench. The *Ironmonger* says of it, "When fixed it is sunk flush with the bench, and by turning the centre screw the toothed edge is raised up to the required height, so as to fix securely the piece of wood that is being planed, or otherwise operated upon. From the nature of the contrivance it effects this with much greater certainty than the old clumsy method usually employed, as there is no chance of slipping even with the thinnest plank, and, consequently, the progress of the workman is very greatly facilitated."

Committee on Metropolitan Subways.—A Committee of the House of Commons, consisting of Sir B. Leighton (chairman), Mr. Du Pre, Viscount Grey de Wilton, Mr. F. S. Powell, and Mr. Floyer, the first three only being present, met, on Friday in last week, to consider a bill on this subject. Mr. Phinn, Q.C., opened the case, and Mr. Bazalgette was examined at great length by Mr. Wilkinson, as to the structure and facilities afforded by subways. The bill is opposed by all the gas and water companies of the metropolis.

The Liverpool Borough Surveyorship.—A letter has been received by the local authorities from the borough surveyor, Mr. Weightman, stating that he has long felt that age and the necessity for more frequent relaxation incapacitate him for the due performance of the onerous duties of his office; and he now considers it to be his duty to place his resignation in their hands at an early date. Mr. Stewart, in referring to this letter, paid a high compliment to Mr. Weightman's ability and integrity.

The Local Government Act in Oxford.—It has been resolved, at a special meeting of the local Street Commissioners, by a majority of 69 to 9, to adopt the Local Government Act in Oxford.

The Sheffield Inundation.—At a meeting of the General Committee of the Bradfield Inundation Relief Fund, it was stated that the subscriptions actually received amounted to 42,751*l.* odd, and that about 10,000*l.* more was known to be in the hands of the committees appointed in several towns. The total disbursements, so far, have been 19,811*l.* The following statistics were submitted to the meeting:—Number of widows caused by the flood, 11; orphans, 40; deaths, 250; persons relieved, 20,537; houses in the district, 4,953; houses flooded, 4,357; houses destroyed and abandoned, 798.

The Gallery of Illustration.—Mr. Macfarren's delightful *Opera di' Camera*, "Jessy Lea," having greatly pleased the inhabitants of the "home counties," is now going upon another provincial tour. This Saturday is mentioned as the last evening on which the operetta can be given. Mr. and Mrs. German Reed have added to the "Pyramid" an allegorical, musical, and tercentennial *séance*, entitled "The Bard and his Birthday," written by Mr. W. Brough. It gives Mrs. Reed the opportunity of singing very charmingly several songs, in which she pleased playgoers some few years ago.

The Scottish National Memorial of the Prince Consort.—A meeting of the acting committee for promoting this memorial was lately held at Edinburgh, under the presidency of the Duke of Buccleuch. His Grace reported that her Majesty had been pleased to name a small committee of advice to assist her with their council in the matter, and had already decided that Edinburgh, as the metropolis of Scotland, was the most appropriate place for a Scottish national memorial. The committee consisted of the Lord Provost of Edinburgh, the Right Hon. Sir Wm. Gibson-Craig, the Right Hon. Sir John M'Neil, Sir John Watson Gordon, president of the Royal Scottish Academy, Dr. Lyon Playfair, and himself. It was resolved to wait the further expression of her Majesty's wishes as to the site and nature of the memorial. The fund amounts to 13,000*l.*

Monumental.—Viscount Combermere paid a visit recently to Chester, accompanied by Baron Marochetti and other gentlemen, and inspected the proposed sites for the equestrian statue of his lordship. The plot of ground just outside the castle gates was preferred.——The *Semaine Catholique* of Montauban (Ile-et-Vilaine) mentions that the friends of the Holy Land, who are exceedingly numerous in France, intend to erect on Mount Carmel a colossal statue of the Virgin. A French monastery has been built on the summit, and the bones of the French soldiers who were killed at the siege of Saint-Jean-d'Acre repose there.

Public Improvements at Hexham.—Besides the projected town-hall and corn-market, steps have been taken towards erecting a large reservoir on the outskirts of this borough; and arrangements have been completed for furnishing the town with an ample supply of water. The reservoir will be filled principally with Tyne water, by intercepting one of the streams tributary to the Tyne; and the promoters will thus be able to store up a supply of 70,000,000 gallons. The cost is estimated at about 12,000*l.* In other parts of the town various public improvements and sanitary measures are being carried out, mostly by the Local Board of Health.

Improvements in Inverness.—Contracts have been entered into for the completion of Union-street. The whole undertaking will be finished by Whitsunday, 1865. The total cost of the buildings will be about 50,000*l.*, of which the original projectors contribute about 40,000*l.*, the remaining cost being for the public hall, the Bank of Scotland, and the United Presbyterian Church.

Ventnor.—Mr. John G. Livesay, architect, has been selected surveyor to the Local Board of Health. The opposition to the adoption of the Local Government Act has been quashed; and the Board, we hear, are determined to carry out, immediately, the sanitary improvements authorised by this Act.

The Thames Embankment.—This great and interesting work is rapidly advancing. It is said that the Duke of Buccleuch, having abandoned all idea of occupying the costly mansion he has just completed, is anxious to let it for Government offices.

SOCIETY FOR THE ENCOURAGEMENT OF FINE ARTS.—On the 6th instant Mr. H. Otley delivered a lecture on the subject of the "Report of the recent Commissioners on the Royal Academy." He contended that the continuance of the Royal Academy in the exercise of its three several functions as dispenser of honours, art teacher, and exhibition proprietor, was inconsistent with the true interests and becoming position of art in this country; and that, leaving to them the appropriation of honorary distinctions, the Government ought itself to take the other two matters in hand, providing ample funds for education in art, and for the exhibition, upon a liberal principle, of the works of artists, without reference to the prestige or claim of those holding academic degrees.

THE LATE MR. F. W. DELAUNAY, ARCHITECT.—The people of Bradford will hear with regret of the death of Mr. Delaunay, architect, of this town. He was a native of Manchester, and during the earlier period of his life was educated in France, and was afterwards articled to one of the first architects in Manchester. Such buildings as Messrs. Milligan & Forbes' stuff warehouse, the bank of the Bradford Banking Company, the enlargement of our infirmary, and the different railway stations between Bradford and Colne, together with many gentlemen's residences in this town and neighbourhood, all of which had their origin from the firm to which he belonged, show he was master of all the different styles of architecture. He came to Bradford about twenty-five years ago, and has, during that period done much towards beautifying our good old town.—*Bradford Observer.*

THE SANITARY STATE OF BELPER.—Six or seven lying with fever in one house is no novelty in Belper, says the *Derbyshire Advertiser*, nor yet is it considered anything very extraordinary for a family of six to be reduced to three in the alarmingly short space of three or four days. There is in existence a sort of Nuisance Removal Committee, but what benefit that committee is to the town is as yet unknown. It is not over pleasant to examine and inspect the nuisances existing, and the post of sanitary officer would be anything but enviable; still the town ought not to be allowed to fall into this deplorable condition. There ought to be appointed a sanitary inspector to redeem Belper from its present lamentable state. The same paper says,—We can assert, without the slightest hesitation, that the habitations of the major part of the population of Belper are unbecoming Christianity, and unfit for human beings to dwell in. The stench upon visiting some of these localities is really unbearable, and, most indubitably, highly injurious to public health.

BRICK MAKING AT SWANAGE.—Stone quarrying and stone masonry have seemed to be almost the trade and occupation of the great bulk of the inhabitants of the town of Swanage, says the *Dorset Chronicle*, but now the whole machinery and operations of brick-making are in full work in a field not far from the beach. What with road-making, brick-making, and building about to be commenced, the place will be for some time a scene of trade, life, and activity. Sites for building are being obtained from Mr. J. Mowlem and Mr. G. Burt, and there is plenty of good stone close at hand at moderate prices.

UPTON-ON-SEVERN: SURVEYOR.—At a meeting of the Board of Waywardens, Mr. John Stephens, of Colwall, was elected surveyor of this highway district, at a salary of 150*l*. Mr. Stephens has had many years' experience in the construction of railroads, &c., under Mr. Ballard and other eminent contractors. The candidates for the office were reduced to two, Mr. Stephens and Mr. C. T. Ireland.

ARCHITECTURAL MUSEUM.—We are asked to mention that in consequence of the severe illness of Mr. J. H. Parker, who had kindly undertaken to lecture at the Architectural Museum, on Tuesday, June 7th, there will be no lecture on that evening. Mr. Parker has been in great danger.

BRIDGING NIAGARA RIVER.—A bridge is to be built over Niagara river at Buffalo, to connect with Canada, at a cost of 1,000,000 dollars. Over 300,000 dollars have been subscribed towards it.—*Canadian paper.*

SOUTH KENSINGTON MUSEUM.—Lord Granville has invited a large and distinguished party to the South Kensington Museum for this Thursday evening, to meet T.R.H. the Prince and Princess of Wales.

PATENT-OFFICE LIBRARY AND MUSEUM.—In the Commons last week, Mr. Dillwyn moved for a select committee to inquire as to the most suitable arrangements to be made respecting the Patent-office Library and Museum. Mr. Cowper said that a commission was now sitting, considering the entire subject, and it was expected that their report would soon be laid before the House. He therefore could not agree to a committee. The Attorney-General also thought it would be highly desirable to wait for their report. The House then divided, and the result was:—For the motion, 21; against it, 16. Majority for the motion, 5.

ROYAL ITALIAN OPERA HOUSE.—The return of Madlle. Patti, on Saturday last, to the scene of her first successes in England, induced what has been lately wanting amongst the *habitués* of Covent Garden,—some enthusiasm. She sang, as Rosina, brilliantly and piquantly as ever, and the rest of the opera was exceedingly well executed. The audience here have a great regard for old favourites, and, truth to say, the difficulty with which anything better is found may well make them so. "The Merry Wives of Windsor" will not be produced after all; and, judging from its very middling effect at the other house, we cannot say that we are sorry for it. Flotow's "Stradella" is in rehearsal, and will be given in lieu, with Signor Wachtel in the principal part.

THE HAYMARKET THEATRE.—All doubt as to the great ability of Mr. Sothern as an actor, entertained by some, notwithstanding the success of "Lord Dundreary," must be removed by his performance in the new piece, "David Garrick." More excellent acting has not been seen for some time. Mr. Buckstone gives force to a small part, and Miss Nelly Moore plays the daughter with grace and feeling. The whole makes a legitimate and increasing success.

PUBLIC HALL FOR DARWEN.—At a meeting held recently in Darwen, it was decided to form a company, with limited liability, for the erection of a public hall in that town. The cost will be about 10,000*l*.

TENDERS.

For three new warehouses, Wood-street, Cheapside. Mr. Robert W. Edis, architect. Quantities supplied by Mr. W. R. Gretten.

Mansfield & Son	£6,640 0 0
Myers & Sons	6,465 0 0
J. & C. Patson	6,460 0 0
Brass	6,429 0 0
Piper & Wheeler	6,244 0 0
Lawrence & Sons	6,182 0 0
Brown & Robinson	6,150 0 0
Hardiman & Sandon	6,147 0 0

For the ironwork of an iron railway bridge, across the River Lugg, near Hereford. Messrs. Curley & Kempson, engineers:—

Carter	£496 10 0
Cliff	332 0 0
M'Kenzie & Co. (accepted)	287 0 0

For the erection of the new building, Addenbrooke's Hospital, Cambridgeshire:—

Smith & Co.	£14,279 0 0
Holland & Hannen	14,848 0 0
Mansfield & Son	14,700 0 0
Jackson & Shaw	14,015 0 0
Bell & Son	12,247 0 0
Thoday & Clayton	10,975 0 0

For house, in the Anerley-road, Sydenham, for Mr. T. Drew. Mr. George Truefitt, architect:—

Messrs. Warne (accepted)	£331 0 0

For residence for Mr. Robert Standerwick, Tufnell Park. Mr. W. Allen Dixon, architect. Quantities supplied:—

Scrivener & White	£1,530 0 0
Manley & Rogers	1,443 0 0
Patman & Fotheringham	1,428 0 0
Sharpington & Cole	1,413 0 0
Holmes (accepted)	1,406 0 0

For the erection of two houses and shops, at Laudport, Hants. Mr. Hendy, architect. Quantities supplied:—

Ward & Son	£1,394 0 0
Buckhurst	1,375 0 0
Gain	1,344 0 0
Duffett	1,285 0 0
Burbidge	1,278 0 0

For new additions and alterations to the shop and premises of Mr. Nye, at Hendeross, Sussex. Mr. J. F. Mathews, architect. Quantities not supplied:—

Cook & Turner	£1,631 0 0
Cooke	1,408 0 0
Gates	1,336 0 0
Thornton (accepted)	1,124 0 0

For additions and improvements to Garendon Hall, near Leicester, exclusive of timber, for Mr. A. Phillips de Lisle. Mr. Pugin, architect. Quantities supplied by Mr. S. E. Marples:—

Ife	£10,200 0 0
Herbert & Son	7,798 0 0
Hallam	6,965 0 0
Lilley & Elliott	6,798 0 0
Gascoyne (accepted)	5,660 0 0

For the erection of warehouses, in Great Winchester-street, for Messrs. Waterlow & Sons. Mr. J. N. Randall, architect:—

Hardiman & Sandon	£11,915 0 0
Mills & Sons	11,784 0 0
Holland	11,473 0 0
Mansfield	11,364 0 0
Jackson & Shaw	11,260 0 0
Cubitt	11,170 0 0
Piper & Wheeler	11,150 0 0
Patson	10,578 0 0
Robinson	10,323 0 0
Lawrence & Sons	10,732 0 0

For the erection of three warehouses, in Wood-street and Milk-street, for Mr. W. Haynes. Mr. R. W. Edis, architect:

Mansfield	£6,640 0 0
Myers & Sons	6,465 0 0
Patson	6,460 0 0
Brass	6,429 0 0
Piper & Wheeler	6,244 0 0
Lawrence & Sons	6,182 0 0
Brown & Robinson	6,150 0 0
Hardiman & Sandon	6,147 0 0

For completion of the Catholic church, Mount St. Mary, Leeds. Mr. Pugin, architect. Quantities supplied by Mr. S. E. Marples:—

	Shell.	Finishings.	West Entrance and Gallery.
Boothman	£4,560	£912	£686
Winn & Pawson	4,438	893	653
Glaister	3,268	966	601
Britton	3,367	969	450
Nicholson & Son	3,082	516	828

For new warehouses, 28, St. Mary-at-Hill, Eastcheap. Messrs. John Young & Son, architects:—

Carter & Son	£5,157 0 0
Ashby & Sons	4,930 0 0
Myers & Son	4,922 0 0
Lawrence & Sons	4,732 0 0
Browne & Robinson	4,687 0 0
King & Son	4,600 0 0
Hart	4,590 0 0
Brass	4,493 0 0
Conder	4,490 0 0
Hill & Son	4,380 0 0

For building three warehouses, at Bermondsey, for Mr. W. J. Clift. Mr. Josh. Peacock, architect:—

Lugg	£9,130 0 0
Wells	9,036 0 0
Carter & Sons	8,740 0 0
Piper & Wheeler	8,042 0 0
Conder	8,268 0 0
Macey	8,139 0 0

For alteration to Wesleyan Chapel, Stoke Newington. Mr. Pocock, architect:—

Clements	£1,037 0 0
Piper & Wheeler	1,025 0 0
Reed	995 0 0
Pritchard	931 0 0
Dove, Brothers	905 0 0

For building a pair of semi-detached residences, at Tunbridge Wells, for Mr. George Hills. Mr. W. Bond, architect:—

Mercer & Cornfield (accepted)	£1,255 9 0

For building a lodge, at Langton, near Tunbridge Wells, exclusive of bricks and tiles, for Mr. George Barrett. Mr. W. Bond, architect:—

Peerless & Hartridge (accepted)	£200 0 0

For excavating and building a large circular tank for a gasholder, for the Bath Gas Company:—

Bladwell & Ambrose	£2,790 0 0
Aust	2,000 0 0
Mann	1,969 0 0
Mitchell (accepted)	1,835 0 0

For village church, Clack, Wilts. Mr. C. F. Hansom, architect. Quantities supplied.

Gane & Co.	£2,358 0 0
Wilkins	2,331 0 0
Morris	2,100 0 0
Aust & Tinson	2,060 0 0
Drew	1,956 0 0
Chinnock	1,858 0 0
Beszant & Salway	1,836 0 0
Lewis	1,814 0 0
Stephens	1,682 0 0
Pinniger (accepted)	1,660 0 0

For alterations and reperations to a house, in Harley-ford-place, Kennington, for Mr. T. R. Apps. Mr. W. Sim, architect:—

Sykes	£318 0 0
Tye & Andrews	271 0 0
Fish	261 0 0

For alterations and additions to Lyndon Hall, Rutland, for Mr. E. N. Conant. Mr. E. Browning, architect:—

		Value of Old Materials re-used.
Halliday & Cave	£10,137	£592
Bradshaw & Perkins	10,119	1,404
Jeffs & Roberts	9,932	980
Richardson & Son	9,895	919
Thoday & Clayton	9,359	303
Ruddle & Thompson	9,187	—
J. W. Thompson	8,951	245
Timms (accepted)	8,500	850

Extracts from notices of the most esteemed publications

"Consist of good patterns, often displaying great beauty of form, characterise the examples sent to us. With a few exceptions, the colouring of the specimens is commendable, in many it is worthy of the highest praise."—*Athenæum.*

"The designs are exceedingly elegant, and the colours good and well arranged. Some of the patterns are of strictly ecclesiastical character, suitable for mission churches and oratories, or they may be used as accessories in church decoration."—*Church Builder.*

"The majority of the patterns are exceedingly satisfactory, and not expensive."—*Builder.*

"These designs are infinitely varied, yet always consistent and effective; the colouring is pre eminently good, both in the selection of tints, and in harmonious combinations, and the quality of the paper is of the highest order."—*Art Journal.*

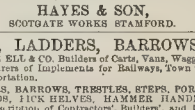
POLONCEAU and SEYSSEL ASPHALTE.



ESTABLISHED  1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Bath Floors, &c with instructions to lay it down.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union street, Borough, London.

BALLAST WAGGONS TO BE LET.—The Midland Waggon Company have a number of low-sided WAGGONS, suited for Ballasting, TO LET. They have also a few for SALE.

GEORGE ELL & CO.
EUSTON WORKS, 366 and 368, EUSTON ROAD, LONDON, N.W

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 100 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Firebuckets, Bosses, Union Joints, Flasks, Bottles, Bowls, Inlet trays for steam rings, Galvanic Batteries, Tabtopye Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES, WHARF ROAD, CITY ROAD, LONDON.

CUMBERLAND'S FERRIOXIDE PAINT should be used by Builders, Engineers, Ship Painters, Contractors, and all who are interested in preserving Iron, Wood, Stone, or Stucco. For Ironwork there is nothing equal to it. Its preservative and antic orrosive properties render it universally applicable. It possesses good body and colour (a rich dark red), and, the greatest recommendation of all, cheapness
PRICE 20s PER CWT Samples sent if required.
MANUFACTURED SOLELY BY
HENRY CUMBERLAND,
CHEMICAL WORKS, MILLWALL, LONDON, E.

EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS.
N.B. These goods are supplied to the largest steel Smelting, Armour Plate, and Crucible Works in the World, to which references can be given on application.

TO BRICKMAKERS. — All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent. of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster

BRICKS, PANTILES, AND PAVINGS.

TO ARCHITECTS AND BUILDERS
JACKSON & GRAHAM
Are the sole Agents in England for the superior PARQUET FLOORINGS manufactured by ANTON REMBE, of MAYENCE, COLOGNE, for which at Paris a medal was awarded in the International Exhibition of 1862. Books of designs sent free by post. No charge for taking plans and giving estimates.
33, 34, 35, 37, and 38, OXFORD STREET, LONDON.

A FREEHOLD MANSION TO BE SOLD.
The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; stabling for eight horses and coach-houses for four carriages; suitable servants' offices, extensive ornamental grounds, with cream houses, in all 28 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq., Solicitor, 57, Russell-square.

DEPTFORD, Kent.—To BUILDERS, ENGINEERS, SHIPWRIGHTS, SMITHS, MANUFACTURERS, and Others requiring or desiring commodious Tenements or Residences for their workmen, or to societies or individuals wishing to provide improved Dwellings for the Working Classes.—The Corporation of Trinity House, having otherwise provided for the purposes of their establishment known as the Lower Ground Almshouses, at the Stowage, Deptford, comprising Twenty-six distinct Dwellings, hereby give notice, that they are willing to receive TENDERS for LETTING the said HOUSES on a repairing lease for 21 years, or more, as may be agreed. Each house consists of a basement, ground, and chamber story; five having gardens and additional offices; and the others can readily have every convenient accommodation added to them. The whole is approved from the line of road by a carriage gateway, and enclosed with an iron railing, forming a distinct property. These houses are situated in the centre of the large manufacturing districts on the South side of the Thames. They are also, from the cheapness of the crossing at the ferry, very conveniently situated in relation to the large district of the manufactories on the opposite side of the river, from Mill-wall and the Isle of Dogs to the localities adjacent. For permission to view, apply to Mr. NORTHWOOD, No. 1 in the Almshouses. The whole are to be Let by Tender, at the Trinity House, on MONDAY, the 30th of May next, at the day fixed, by the Corporation, for receiving the Tenders—For further particulars apply at the Offices of Mr. RICHARD SUTER, Architect and Surveyor, 25, Gracechurch-street, E.C. and where a plan of the property may be seen. P. H. BERTHON, Secretary.

Trinity House, March 28, 1864.

BUILDING LAND at CHITT'S HILL, WOOD GREEN, overlooking three different counties, and fronting the high road, eight minutes' walk from the station and Alexandra Park, TO BE LET for the erection of superior Villa Residences, which are in great demand in this beautiful locality. Term, 99 years. Money advanced if required.—A plan may be seen, and particulars obtained on application to S. HEWITT, Architect and Surveyor, 101, Great Russell-street, Bloomsbury, W.C.

WATERSIDE PREMISES, CITY-ROAD.
MESSRS. FULLER & HORSEY are instructed to LET, on Lease, from Michaelmas next, EXTENSIVE WATERSIDE PREMISES occupying a site of 30,000 superficial feet, situate on the Wenlock Basin, City-road, and comprising a spacious and substantial modern brick-built manufactory of two floors, engine and boiler houses, with 50 horse power at engine and three Cornish boilers; range of brick built offices, and paved yards with gateway entrances. There is a water frontage of about 270 feet.—For further particulars apply to Messrs. FULLER & HORSEY, No. 13, Billiter-street, London, E.C.

TO BREWERS and OTHERS.—For SALE, by PRIVATE CONTRACT, a Plot of FREEHOLD BUILDING LAND, in the immediate neighbourhood of the Really Splendid Lines of the Great Western, South Eastern and South-Western Railways, and abutting upon a road which will soon become one of the principal thoroughfares to the Metropolis. The site is admirably adapted for a good beer-and-wine House. Money advanced if required.—Apply to Mr. WM. WEEDON, Solicitor, Reading.

BUILDING LAND, Reading, Berks.—FOR SALE, by PRIVATE CONTRACT, in lots suited for the erection of private Dwelling-houses, several acres of FREEHOLD BUILDING LAND forming part of the rapidly improving Western suburb of the Town, situate on the Estate known as Cintra. The property is remarkably healthy, and several portions of it are well fenced in with hedges, and planted with trees and shrubs of many years' growth. Distant from the centre of the Town and three Railway-stations, about a mile. A second Church is being erected in the immediate neighbourhood. Money advanced if required.—Apply to Mr. W. WIPPELL, Solicitor, Reading.

IMPORTANT to COAL PROPRIETORS, CAPITALISTS, and OTHERS.—The owners of valuable MINES of COAL, lying within and under a compact freehold estate of upwards of 1,700 acres, situate about three miles from the important manufacturing town of Blackburn, Lancashire, are prepared to treat for the whole SALE of the COAL, or to enter into favourable arrangements for working the same for a term of years. Good turnpike roads intersect the estate, and the same is within very easy distance of railway and canal.—For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

TO BUILDERS and OTHERS.
BROMLEY, KENT.—LAND TO BE LET, for Building, on Lease, for ninety-seven years, about half a mile from a railway station, and adjoining to the town of Bromley. Soil, sand and gravel; with a good supply of water.—For particulars, apply to Messrs. PRESTON & DORMAN, 15, Gresham-street, E.C.

BUILDING LAND.—Several PLOTS TO BE LET on LEASE for 99 years, in the Park, Highgate. One of the healthy situations in the vicinity of London, with extensive and beautiful views. A new church and a railway station immediately adjacent. Sewers and roads on the most approved construction are being made. Gas and water can be readily applied. For particulars apply to T. H. WYATT, Esq., No 77, Great Russell-street, Bloomsbury, W.C.; or to Mr. WHEELER, Builder, South Grove, Highgate, N.

BUILDING LAND TO BE LET, on advantageous terms, for 99 years, situate at Merton, Surrey, within ten minutes' walk of the Wimbledon Station, or 45 minutes of the City.—The plan of estate can be seen, and particulars obtained upon application to Mr. EDWIN SHALLES, Surveyor's Office, Christ's Hospital, Newgate-street, from TEN till FIVE o'clock.

BUILDING LAND TO BE LET on LEASE, in the Lower Richmond-road, within a mile of Putney and Barnes Railway stations.—Apply to W. R. WOOD, Timber Merchant, Wandsworth.

EXMOUTH.—To BUILDERS, CAPITALISTS, and OTHERS.—Notice is hereby given, that by a recent order of the Court of Chancery, the restriction against leasing for long terms of years, imposed by the will of the late Lord Rolle, and in consequence of which the extensive and beautiful district, situate at the vicinity of the town of Exmouth, and reaching to the villages of Littleham and Budleigh Salterton, has up to the present time been unable to be let for building purposes, has been removed, and the trustees of the property are now prepared to entertain offers for taking the LAND on LONG LEASES. The advantages of the situation, as regards salubrity, and beauty of scenery, are well known, and are justly recognised as to render it needless to refer to them more particularly here. All persons desirous to be informed by Messrs. FREERE, CHOLMELEY, & FOX-TER, of No. 28, Lincoln's Inn-fields, London, W.C. Solicitors to the Estate.

IPSWICH, Suffolk.—Valuable Leasehold BUILDING LAND TO BE LET, on advantageous terms, eligibly situate near the Great Eastern Railway station. Houses are much in demand in this locality, an excellent opportunity for investment is therefore offered.—Further information may be obtained of Mr. F. BARNES, Architect, Ipswich.

WATERSIDE PREMISES, PIMLICO.—TO BE SOLD, with possession, the LEASE for 63 years of a WHARF in Upper Belgrave-place, with modern-built house, offices, warehouses, granaries, 7-stall stabling, paved yard, &c. Frontage to the road, 77 feet. Or the adjoining WHARF TO BE LET, with option of purchase. The extensive improvements which are about to take place on the Marquis of Westminster's Estate in the immediate neighbourhood of this property, will materially increase the value of it in a short time.—For terms, apply to FULLER, HORNE, & EVERSFIELD, 10, Parliament-street, Westminster, or 80, Fore-street, City.

SUNNINGHILL WELLS, near ASCOT, BERKS.—FOR SALE by PRIVATE TENDER, a valuable and picturesque FREEHOLD ESTATE, known as The Wells, Sunninghill, which comprises a dwelling-house which has been used for many years as an Inn, with a large assembly-room, extensive stabling and buildings, meadows and gardens, and pleasure grounds, with ornamental timber and a mineral spring. The property is suitable either for the site for a New Hotel, or for the erection of elegant villa residences, being in the centre of a beautiful district, near to the Race-course, and containing altogether about four acres and a half, with immediate possession. A plan, with full particulars and conditions and form of Tender, may be obtained from Messrs DARVILL, SON, & POULTON, of Windsor, the Vendors' Solicitors. The TENDERS must be sent to Messrs. DARVILL & CO. on or before the 17th of JUNE next, endorsed "Tenders for the Purchase of the Wells, Sunninghill." The Vendors will not bind themselves to accept the highest or any other Tender.

SUNNINGDALE, BERKS.—TO BE LET, on BUILDING LEASES, for the erection of GENTLEMEN'S RESIDENCES, portions of an Estate, in the neighbourhood of Windsor Park, and in close proximity to the Sunningdale Railway Station. The neighbourhood is healthy. The Estate commands extensive frontages to existing roads and good views of the surrounding district.—For particulars, apply to Messrs. CLUTTON, 9, Whitehall-place, Westminster.

FREEHOLD BUILDING LAND TO BE LET. Term 99 years. Ground-rents moderate. Advances liberal.

At HIGHGATE, commanding extensive views.
At PLAISTOW, on Main Barking-road.
At STRATFORD, closely Railway Workshops.
Apply to Mr. WILLIAM ELLISON, Architect,
13, Fenchurch Buildings, London, E.C;
21, Manchester Buildings Westminster S.W.

CHISLEHURST, BROMLEY, and MOTTINGHAM, KENT.—About 240 Acres of FREEHOLD LAND, TO BE SOLD or LET, on building leases, direct from the freeholder, in suitable lots. Most delightfully situated near two stations, with speedy access to the Crystal Palace, Victoria, London Bridge, and Charing-cross Stations.—Apply to Mr. DAVENPORT, 35, Bucklersbury, E.C.

IN the matter of the FREE GRAMMAR SCHOOL of the Rev EDWARD WILSON, Clerk, in the Parish of Camberwell in the County of Surrey.—Notice is hereby given, that a Piece of LAND belonging to the above-mentioned Charity, containing Five acres, or there-about, and situate near to the Church and Churchyard of St. Giles, in the Parish of Camberwell, and now let as grazing-ground to Mr. JOHN DEACON, is proposed to be forthwith LEASED by the TRUSTEES for Building purposes, under the authority of the Charity Commissioners for England and Wales, for the term of 99 years, at the yearly rent of a peppercorn during the first year, of £100 during the second year, and of £2 0s during the remainder of the term; the Lessee being bound to erect fifty eight houses on the demised land of the value of at least £60. for each house. Any objection to the grant of the proposed lease may be notified to the said Commissioners, at their Office, No 8, York street, St. James's-square, London, within twenty-one days from the date hereof. Further information as I particulars may be obtained on application to Messrs. DESBOROUGH, YOUNG, & DESBOROUGH, 6, Size lane, Bucklersbury, City, E.C. the Solicitors of the Trustees.

(Signed) HENRY M. VANE, Secretary.

Dated this 26th day of April, 1864.

ALUM BAY ESTATE, FRESHWATER, ISLE of WIGHT.—BUILDING LAND TO BE LET, for a term of ninety nine years, and six recent Rent moderate.—Particulars may be obtained of Mr AUGUSTUS FREKE, Architect and Surveyor, 22, Henrietta-street, Covent Garden, London; of Mr. WILLIAM RAWLINS, Solicitor, Winchester; of Mr. C. F. FISHER, Solicitor, Ventnor; or of Mr. S. M. BAKER, Solicitor, Ryde, where plans showing the disposition of the estate may be seen.—The journey from London via Basingstoke and Yarmouth, can be accomplished in about five hours.

TO BUILDERS.—TO BE LET, on leases, direct from the freeholders, several valuable PLOTS of LAND, fronting Stanstead lane, and nearly midway from Forest hill and Catford Bridge stations. The water and gas pipes are laid down, and the sewer is made.—Apply to Mr. DAVENPORT, Estate Agent, 35, Bucklersbury, E.C.

WHARF, at CHARLTON, near Woolwich Dockyard.—TO BE LET on Lease, or the Lease TO BE SOLD, a WHARF 200 feet deep, river frontage 178 feet 6 inches, with dwelling house, out buildings, laundry, frame, &c.—Apply to the Wharfingers, on the Premises, Messrs. CHURCH & CO. William-street, Woolwich; or Mr. HARVEY, 81, Pope-street, Westminster.

BUILDING LAND, SURREY.—Most eligible and attractive SITES for VILLAS, near the Caterham Station. About 7 acres TO BE LET, with right of purchase. If desired, advances would be made to builders.—Apply to Mr. DODD, 53, Lincoln's-inn-fields, W.C.

WOODFORD.—To BUILDERS and OTHERS.—TO BE SOLD, by private contract, an eligible PROPERTY, facing the green, consisting of dwelling houses and cottages, producing a gross rental of £40, a year and in part let for ninety-nine years, from Midsummer, 1847 (less one day), at a groundrent of £6. There is ground convenient for building, frontage of about 241 feet, with a depth of about 198 feet. Apply to WILLIAM MUNDAY, Esq. Solicitor, 3, Carey-street, Lincoln's Inn.

EXTENSIVE GROUND WORKSHOPS to LET with excellent Dwelling-house attached, well suited for a Pianoforte or Cabinet Maker, separate gateway entrance if required. Rent 120l. a year, or Lease to be sold.—Apply to Messrs. LEREW & LEREW, Auctioneers, 2, Cardington-street, Hampstead-road, N.W.

TAUNTON, SOMERSET.—TO BE SOLD for building First-class Villa Residences, PART of the HOVILANDS ESTATE, in the Parish of Trull, on the road from Taunton to Honiton. This exceedingly desirable property is situated about half a mile from the town of Taunton; it is on an eminence commanding a most extensive view over the far famed vale of Taunton Dean, and is surrounded by nothing but residences of the highest character. Being out of the borough, the rates are very moderate; and gas and water pipes run in front of the land.—For plans and particulars apply to Messrs. LEVERIDGE & VENN, Surveyors, Upper High-street, Taunton; or, Messrs. JOHN HARE & SON, Estate Agents, North street, Taunton.

WALTHAMSTOW, ESSEX.—Eligible Freehold Building Land.—For Sale, NINE LOTS of eligible FREEHOLD BUILDING LAND, with frontages to Hoe street and Linden Grove, situate within five minutes' walk of the church, and in one of the most pleasant parts of the parish, having a gradual slope to the west, and being well adapted for the erection of a superior class of houses. For plans and particulars apply to Mr. HOWORTHAM, 94, Gracechurch-street, City; or to Mr. W. E. WHITTINGHAM, Hermon Villa, Oxford road, Walthamstow.

GROUND in HIGH STREET, Borough.—The Governors of St. Thomas's Hospital are prepared to receive ENDERS from parties desirous of Building Leases, for a term of 80 years from Christmas next, the valuable and extensive SITE of the premises known as the CATHERINE WHEEL INN, and of No. 9 and 10A HIGH STREET, BOROUGH. Plans and Particulars, with form of Tender, may be obtained at the counting-house of the Hospital, No. 14, St. Thomas's-street, Borough, or at Mr. HENRY CURREY's office, No. 4, Lancaster-place, Strand, and the Form of Lease may be seen (if desired) at the Offices of Messrs. CLAYTON, COOKSON, & WAINEWRIGHT, No. 5, New Square, Lincoln's Inn. The Tenders are to be delivered on or before MONDAY, the 6th JUNE, at 12, St. Thomas's-street, where the Governors will meet on TUESDAY, the 7th of JUNE, at half-past TEN o'clock, a.m. to consider the same. The Governor do not bind themselves to accept the highest or any Tender. HENRY CURREY,
4, Lancaster-place, Strand, W.C. May, 1864.

DESACHY'S FIBROUS PLASTER.
GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made. It has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

THE FURNISHING OF BED-ROOMS.

HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to judge properly of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed room Furniture in the different styles.

Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS

The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises

They particularly call attention to their Patent Spring Mattress, the Summer Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196 197, 198 Tottenham-court-road, London.

CLASS 35, NO. 6849.
The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.
Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 68, South Johnstreet, Liverpool.

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks. The HOLYWELL LIME-STONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.
Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Parry's Lime Works, Holywell, Flintshire.
The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents wanted. No applications attended to without a banker's reference.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.
IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern book, designed by M. Digby Wyatt, esq., together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.
May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.
London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, N. Sndly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Juries," page 581, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Peakeries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.
Freshly imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.

TIME IS MONEY.—All who employ workmen should send two stamps to MERRITT & HATCHER, 2, Grocers'-hall, Poultry, E.C. and by return of post they will receive a variety of useful Forms, by which book-keeping is facilitated, and loss of time and material prevented.—MAPS, PLANS, DRAWINGS, BILLS of QUANTITIES, &c. executed with despatch in the best style, at the lowest possible charges.—MERRITT & HATCHER, Printers in every Branch, 2, Grocers'-hall-court, Poultry, E.C.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 18 & 19, 14, RUSSELL STREET, Covent Garden, W.C. Advances from £100 to £5000 upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advances can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

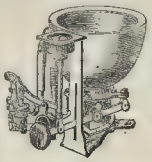
DRAWINGS, WITH PRICES, WILL BE FORWARDED FREE, ON APPLICATION.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead It does not change colour with the London atmosphere.

ADULTERATIONS. Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Whether sold as for the Lause of "Improved Zinc Paint," or as the manufacturer Two or Three qualities, no workman can produce good work with such a stuff. Workmen who have received the Patent Zinc Paint will never willingly use any other Paint for their best work.



CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

Approved Bills accepted May be viewed two day prior to Sale and Catalogues obtained on the Premises, and at the Office of Mr KIRKMAN, Auctioneer, Valuer, Surveyor, Loan and Estate Agent, 5, Chancellor's lane, E.C.; and Blackheath, Kent, opposite the Railway station.

RAILWAY CONTRACTORS, PLANT AND IMPLEMENTS, DEVIZES AND HUNGERFORD

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on THURSDAY, June 2nd, 1864, at the Lamb Yard, at DEVIZES, at TWELVE o'clock precisely, on account of the Railway Contractors, Messrs Butterfield and Davis, CONTRACTOR'S PLANT, comprising 100 Trucks, new, 2 cranes, 2 portable engines, new, 2 crabs and pulleys, 2 sets of timber trucks, including 10 carried earth waggons, side and end tip, 2 contractor's trucks, for sleepers, 10 navvy-barrows, 50 timber trestles, 2 timber carts, 1 timber carriage, 1 hill-heart, dog-cart, 1 set of harness, 10 large wood centres, rail staples, buffers, iron wheelbarrow, tools, 1 two-horse drum, Perley's new planing machine, grates and washers, stocks and dies, smiths' tools, screw jack, new wire rope, 2 tarpaulings, pug-mill, the new loom of stabling and harness, portable office, new wrought iron wheels and axles, 2 cubic yards of stone, 1,000 yards gravel, water tank, 2 horse power chaff cutting machines, 1 hand power ditto, quantity of three-sail, and 1 three-sail other effects to be viewed on Wednesday previous and catalogues of Sale, when catalogues may be had on the Works, and of Messrs FULLER & HORSEY, 13, Basinghall-street, London, E.C.

MARINE RESIDENCE, with 24 acres of Land, distinguished as Apley House and Paddock, and Plot of Property on the Coast, as Apley Head, Isle of Wight.

MESSRS. FULLER & HORSEY are instructed by the Trustees to SELL by AUCTION, at the MART, London on WEDNESDAY, JUNE 15, 1864, at TWELVE o'clock, in one lot, APLEY HOUSE and PADDOCK, an important freehold property, situate within a few minutes' walk of the pier, at Ryde, Isle of Wight, possessing singular natural advantages as a residential estate, with extensive sea views, and the whole of the grounds in demand as a first-class hotel watering place. Apley being now the only land available for such purposes with a sea view, in a close proximity to the esplanade, at the west end of the estate of Ryde, with a rising terrace the northern boundary being cut by the sea, and secured by a stone wall, forming an esplanade in a line with the principal sea front, 15 feet above other effects to be laid here, with chines for persons descending with their wheeled planta to the removal of which would (if desired) make the owner, to build a terrace of lodging houses on the esplanade, without interfering with the privacy or views of the higher portion of the property. The surface of the land is undulating, rising to the house on the 11th side, sloping towards the south, and it commands again to the north-east able elevation, commanding very extensive and intricate views from the Isle of Wight, on the east, extending to Southsea towers on the west. The principal house, which was enlarged and improved by its late owner, is approached by a carriage drive through a park like grounds, with two lodge entrances from the Apley road, and from the St Helen's road, Ryde.

The internal arrangements comprise a suite of three reception-rooms, well-proportioned dining room, and gentleman's room, numerous principal bed rooms, large range of domestic and dressing rooms, bath-room, work room, nursery, very complete domestic offices, and capital servant cellaring, an ample supply of spring water from a deep well, and large underground tank for soft water. In the front of the house are lawns, north and south lawns, noted for the luxuriance of the myrtles and other choice shrubs and trees, the whole enclosed by rich park like land, studded with stately timber, and embracing many very fine oaks, chestnuts, limes, and elms, the latter towering high and forming, with the two very stately old cedar trees, conspicuous objects from Ryde Pier at a short distance from the house are modern stables and farm buildings, including a dwelling-house for the gardener, standing for four horses, a double coach house, cow houses, piggeries, harness, potting and fruit rooms, range of forcing and all essential houses, large walled kitchen garden, with choice wall fruit trees and espaliers, and a well stocked orchard. The Apley Pond, a fine sheet of water, in a warm sequestered part of the estate, and affords a large available frontage, while the land itself contains valuable stone for building and brick earth, and the remarkable and picturesque ruins of the old Apley House need be but little if at all interfered with, by judicious building operations under the control of the proprietor. The eligible sale of building land at Apley, abutting and confined by the fact that all marketable land has with the last few years been let at such rents for building purposes; the singularly rural advantages possessed by the property, as well as its high interest, render Apley House and Estate of more than ordinary attention, either as a building speculation alone or combined with the possession of one of the most charming marine residential properties in the Isle of Wight. Printed particulars are in course of preparation, and may be had of Messrs WALLIS, House Agents, and of the Bugle Hotel, Ryde, at Cattle Fair Hotel, Newport, and at the Star and Garter Hotel, Portsmouth; of Messrs THOMAS & HOLLAMS, Solicitors, Commercial Sale Rooms, Mincing lane, London, E.C.; and of Messrs FULLER & HORSEY, 13, Basinghall-street, London, E.C. to whom all applications to view the property is to be addressed.

GREENWICH.—Three acres of valuable FREEHOLD BUILDING LAND, in the perfect Water Frontage

MESSRS. GLASIER & SONS will SELL by AUCTION, on WEDNESDAY, JUNE 1, at GARRAWAY'S, in one lot, three acres of valuable FREEHOLD BUILDING LAND, having a frontage of about 400 feet, on Deptford Creek, partly situate, with good approaches, from Ravensbourne and Ramsgreen's roads, and New Road, Deptford, with plan, lay shortly be had of SAMUEL ARCHBUTT, Esq. 41, Gracechurch-street; of W. WILSON, Esq. Architect, 45, Craven-street, Strand; at GARRAWAY'S, and of the Auctioneers, 41, Charing Cross, S.W.

CASTLEBAR HILL PALING.—Valuable FREEHOLD LAND, with beautiful Building sites, being a little portion of the Pitshanger Estate, immediately adjoining the Ealing Railway Station.

MR. MOXON will SELL by AUCTION, at the MART, near the Bank of England, on THURSDAY, JUNE 2, at ONE o'clock, several Lots, 3 Acres of FREEHOLD LAND, exonerated of land tax, most delightfully situate, near Castlebar-hill, on the parish of Ealing, within a few minutes' walk of the railway station, and seven miles from London; suitable for the erection of first class residences, having good roads, with a gravel subsoil, and overlooking the valley, sacred to the river Brent. Several superior residences have already been erected and the gas and water pipes are laid up to the estate.—Particulars, with plans, may be obtained of Messrs LOWE, Solicitors, 6, Field-court, Temple; at the Auction Mart, City; and of Mr. WM. MOXON, 5, St. Martin's place, Trafalgar square.

PLOT of FOUR ACRES of BUILDING LAND, Walton on Thames.

MR. MOXON will SELL by AUCTION, at the MART, near the Bank of England, on THURSDAY, 2d JUNE, in one lot, an eligible FREEHOLD ESTATE of four acres, most pleasantly situate on the Walton Hill, and forming one of the entrance into the town of Walton on Thames, near to Oatlands Park and Walton Bridge. It has a frontage of 285 feet to the high road, and also a back entrance, and is well adapted for villa or other building plots. Also at same time, VILLA RESIDENCES, one known as First House, the other as Cypress Cottage. Particulars at the Auction Mart, City; of Messrs ABBOTT, ARKELL, & ABBOTT, Solicitors, New Inn, Strand; and at Mr. MOXON'S Offices, 5, St Martin's place, Trafalgar square, London.

Large Plot of Freehold Building Land, close to the Victoria Railway Station.

MR. MOXON begs to give notice that the Large PLOT of BUILDING LAND, having a frontage of nearly 250 feet, and a depth of 200 feet, on the Victoria and Chelsea street, was NOT SOLD at the Auction, and can now be treated for privately

No. 5, St. Martin's place, Trafalgar square.

TO BUILDERS, CONTRACTORS, DEALERS IN MATERIALS AND SHOP FRONTS, AND OTHERS

MR. GEO. HAINES is directed to SELL by AUCTION, on MONDAY and TUESDAY, MAY 23rd & 24th, at TWELVE for ONE each day, all the CAPITAL BUILDING MATERIALS of EIGHT DWELLING HOUSES with a BAKER'S and HABERDASHER'S SHOP, situate Nos 12 to 24, UPPER LADBROKE-STREET, PADDINGTON, comprising upwards of a million of prime STOCK BRICKS, several tons of lead, oak rafters, joists, gutters, pipes, and cisterns, excellent internal fittings of the usual description, panel ball and staircases, three bathroom baths over large show fronts, well two inches thick mahogany and brass inlaid sash windows, and large plates of glass; useful requirements in shutters, set fittings, counters, and useful fittings. May be viewed Cards, two of Messrs HAINES & SON, Auctioneers, Moorgate street, City; and at the Auctioneer's Offices, Gravenor-street West, Eaton-square; and 12, High street, Kensington.

TO BUILDERS, MATERIAL DEALERS, CONTRACTORS, AND OTHERS

MR. F. INDERMAUR will SELL by AUCTION, on WEDNESDAY and THURSDAY, the 18th and 19th MAY, at St. James's-road, Loughborough-road, Brixton, near St. John's Church, an extensive assortment of first-class MATERIALS, comprising Modern Pine deal shop fronts and doors, new sashes and battens, sound joists, rafters, quartering, partitions, sashes and frames, floor boards, 2, 4, and 6 panel doors, marble chimney-pieces, hearths, register grates, paving, landing, &c.; also an extensive stock of red terra cotta chimney pots. On view two days prior to Sale. Catalogues to be had on the Premises, and at the Auctioneer's, 134, Union-street, Borough.

VAUXHALL-GARDENS ESTATE, LAMBETH, SURREY.—Valuable FREEHOLD BUILDING LAND, arranged in lots suitable for the erection of shops, residences for Operatives, Factories, and Business Premises; also GROUND RENTS, amounting to 160l. per annum.

MESSRS. DRIVER & CO. are instructed by the Mortgagee, under power of sale, to submit to AUCTION at the MART, near the Bank of England, on FRIDAY, MAY 20, in twenty lots or such to suit the convenience of purchasers, some very valuable FREEHOLD BUILDING LAND, situate in the parish of St. Mary, Lambeth; comprising a compact block portion of the site of the late Royal Vauxhall Gardens, and having frontages upon Kennington-lane, Vauxhall walk, and several new roads and streets, viz. Oval Auckland street, Burnett-street, Brunel street, Leopold-street, Spring-gardens, and Italian walk. The Vauxhall Station, on the South Western Railway, and the River Thames are close to the property, affording ready access from all parts, as well as facilities for the transit of goods. The sale will also include several lots of Ground Rents, amounting together to 40l. per annum. Detailed particulars, with plans, may be obtained at the Royal Vauxhall Tavern and other bills in the neighbourhood; at the Auction Mart; of Messrs. KEMSON & TROLLOPE, Solicitors, 31, Lincoln's-inn-fields, Westminster, and of Messrs. DRIVER & CO. surveyors, Land Agents, and Auctioneers, 4, Whitehall, London, S.W.

FOR SALE.—E. DENCH, having given up business, has left on Land THREE HANDSOME CONSERVATORIES, ONE VINERY and PIT, for which he will not refuse any reasonable offer. Any letters to view the same, or for further particulars address E. DENCH, Pomfret Villa, Oakfield-road, Penge.

Lectures on TUESDAY evenings, at EIGHT o'clock Season Tickets half-a-crown. Will close JUNE 30th. Also, in the same Galleries, the EXHIBITION of the SOCIETY of SCULPTORS of ENGLAND.

DWELLINGS for the LABOURING CLASSES.—A SPECIAL CONFERENCE will be held at the House of the SOCIETY of ARTS, on THURSDAY, the 26th, and FRIDAY, the 27th of MAY, to which the Council invite all the Members of the Society of Arts, and others known to take a special interest in the subject.
The Conference each day will be open at 11 30 precisely, and closed not later than FOUR o'clock, the chair being taken by the Chairman of the Council
The discussion will be taken:—
1. On the insufficient number of habitations for the labouring classes in town and country
2. On the badness of the existing accommodation.
3. On the effects arising from this state of things, viz.:—
   (a) Religious, moral, and social.
   (b) Sanatory.
   (c) Economic.
4. On the causes to which these evils may be or have been attributed, such as—
   (a) The Law of Settlement.
   (b) The Poor Laws.
   (c) Tenure of property such as mortmain, leasehold system, tenancy for life, &c.
   (d) Legal difficulties affecting the transfer of property.
   (e) Difficulty of providing proper dwellings at a cost which will be remunerative to capital in town and country.
5. Remedies:—
   (a) What can be done by legislation?
   (b) What can be done without legislation?
   (c) What assistance, if any, can the society give in either of these directions?
Persons interested in the subject should make application to the Secretary.—By order, P. LE NEVE FOSTER, Secretary.
Society of Arts, John-street, Adelphi, May 17, 1864

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow and Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr TYLER, 12, Abingdon street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

NOTICE.
BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.
72—74, Bishopsgate-street Within, November, 1863.

COMPETITIONS.

TO ARCHITECTS.—The GLOUCESTER BELL HOTEL COMPANY, LIMITED.—The Provisional Directors invite Architects to furnish PLANS and ESTIMATES for a new HOTEL (on the site of the present Bell Hotel, Gloucester), and offer the following premiums:—To the first in merit, 50l. and to the second, 25l. The Plans must be delivered at or before TEN o'clock a.m. on the 18th proximo, to THOMAS TAYNTON, Esq. Solicitor, Ashmeads House, Gloucester, who will, on application, furnish a plan of the site and conditions.

TO ARCHITECTS.—The Local Board of Health for the Hartlepool District are desirous of obtaining Plans, Elevations, Specifications, and Estimates for a COVERED MARKET, POLICE STATION, and OFFICES, to be erected upon a plot of ground in Middlegate-street, Hartlepool. A premium of 25l. will be paid by the Local Board for the plan and estimate selected by them, and a further sum of 5l. will be paid to the successful competitor, on condition that he furnishes a detailed specification for the proposed works, such plan, estimate, and specification to become the property of the Local Board. The whole expense of the erections not to exceed 2,500l. The Board do not bind themselves to employ the architect whose plan may obtain the premium. A plan of the ground and printed particulars can be obtained on application to the Borough Surveyor. All drawings to be on a scale of not less than 8 feet to the inch, and to be sent under motto, with sealed names (carriage free), addressed to the Borough Surveyor, King-street, Hartlepool, and endorsed "Market Plan," on or before the 18th day of JUNE next.—By order, F. G. MORRIS, Borough Surveyor.
May 13, 1864.

CONTRACTS.

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS
Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Penarth, near Cardiff, in the county of Glamorgan, may inspect the Drawings and Specifications at her Majesty's Custom-house at Cardiff, or at this Office, between the hours of TEN and FOUR, from THURSDAY, the 19th of MAY, to SATURDAY, the 4th JUNE now next ensuing, but both inclusive (Sundays excepted).
Tenders to be sent to this Office not later than TWELVE o'clock at noon, of MONDAY, the 6th JUNE, under seal and directed to the Commodore Controller-General of Coast-Guard, and endorsed "Tender for Penarth."
The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.
Dated this 10th day of May, 1864, at the Admiralty, Coast-Guard Office, 12, Spring-gardens, London, S.W.

WAR DEPARTMENT CONTRACTS.—Such Persons as are desirous of UNDERTAKING the several Works and Repairs to the FORTIFICATIONS, MILITARY STORE BUILDINGS, BARRACK, and other BUILDINGS required by the WAR DEPARTMENT, at the places undermentioned, upon a CONTRACT, to commence on the 19th JUNE, 1864, and terminate on the 31st MARCH, 1868, may be furnished on payment of Seven Shillings and Sixpence, with the Printed Schedules of Prices, Conditions of Contract, and every necessary information respecting the same, on personal application at this Office between the hours of EIGHT and THREE, each day (Sundays excepted), from the 1st to the 9th JUNE, 1864, after which no further issues will be made.
Stations for which separate Tenders will be received:—
Portsmouth, including Portsea, Southsea, and Gosport, and with 5 per cent. allowed, Lumps, Eastney, and Cumberland Forts.
Hilsea, including Tipner.
Portsdown Hill and Works thereon, excepting Fort Wallington.
One Contractor only will be accepted for the whole of the Trades for each of the above-named Stations, but the rates of per centage at which the parties tender may be different for each trade, at their option, but such rates must, be shown in the proper place in each of the Schedules.
The Tenders will require to be delivered, before TWELVE o'clock at Noon on the 14th day of JUNE, 1864, at the War Office, Pall-mall, London, addressed to "The Director of Contracts," and endorsed "Tenders for Artificers' Work, Portsmouth District," in the left-hand corner of the envelope.
N.B.—The Secretary of State for War reserves to himself the right of rejecting the whole or any of the Tenders.
C. FANSHAWE, Colonel, Commg. Royal Engineer,
Royal Engineer Office, Portsmouth District.
Portsmouth, 18th May, 1864.

WAR DEPARTMENT CONTRACT. NOTICE to BUILDERS.
TENDERS are required for the PERFORMANCE of certain WORK in connexion with ALTERATIONS and IMPROVEMENTS to Eight Wing of Soldiers' Quarters, Hulme Barracks, Manchester.
Parties desiring to Tender for the execution of these Works must leave their names at this Office, on or before the 25th instant, and pay the sum of 10s. 6d. for the bill of quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.
The Secretary of State does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, 225, Shetford-road, Manchester, May 11, 1864.

CROYDON LOCAL BOARD of HEALTH. TO IRONFOUNDERS and OTHERS.—Persons desirous of contracting with the Croydon Local Board of Health for the manufacture and delivery at the East Croydon Railway Station, of 9,000 yards of 3-inch, and 2,000 yards of 2-inch IRON SOCKET PIPES, and a small quantity of larger sizes, in accordance with the specification prepared by Mr. BALDWIN LATHAM, C.E. the Engineer of the Croydon Local Board, can inspect the specification and obtain forms of Tender at the above Engineer's Office, in the Town-hall, Croydon, on and after TUESDAY, the 17th day of MAY. Sealed Tenders, endorsed "Tender for Iron Pipes," are to be delivered at the Offices of the Local Board, in the Town-hall, Croydon, on or before FOUR o'clock on TUESDAY, the 7th day of JUNE next.
11th May, 1864. HENRY RICHARDS, Clerk to the Board.

TO BUILDERS.—Persons willing to submit TENDERS for the ERECTION of a SCHOOL for 100 Children, together with the necessary Offices and Teacher's Residence, at Elmswell, in the county of Suffolk, are informed that the plans and specifications will lie for inspection at the Fox Inn, at Elmswell, from MONDAY, 16th inst. to SATURDAY, 27th inst. Tenders, upon forms supplied, to be forwarded by post on or before MONDAY, 30th inst. addressed to the Architect, Mr. R. J. WITHERS, 51, Doughty-street, London, W.C. and from whom further particulars may be obtained. The lowest or any Tender will not necessarily be accepted.
W. H. C. LUKE, Rector of Elmswell.
Elmswell, Suffolk, 7th May, 1864.

[For remainder of Contracts see next Page.

CONTRACTS.

BOARD of WORKS, WHITECHAPEL DISTRICT.—A Meeting of this Board will be held on MONDAY, the 30th day of MAY, 1864, at SIX o'clock in the Evening, at the Office, No. 15, Great Alie-street, Whitechapel, to receive TENDERS from persons willing to Contract for the period of One Year for the EXECUTION of the several PAVING WORKS connected with the DISTRICT, described in the specification or schedule of contract prepared by the Board, a copy of which, with the form of Tender, may be obtained at the Office of the Board upon payment of Ten Shillings, which sum will be returned to persons tendering. All Tenders must be delivered at the Office previously to the hour of meeting; and any Tender which is not upon the printed form prepared by the Board, and duly signed by the person or persons tendering, will be rejected. Persons tendering, or their representatives, are required to attend the meeting of the Board. The Board do not bind themselves to accept the lowest or any Tender.

ALFRED TURNER, Clerk to the Board.

15, Great Alie street, Whitechapel, 17th May, 1864.

TO STONE MERCHANTS.—The Council of the Borough of Margate are willing to receive TENDERS for about 500 feet superficial of 2½-inch TOOLED YORK PAVING, to be delivered in the Harbour of Margate, free of all charges, on or before the 20th day of JULY next. Tenders, addressed to the Town Clerk, to be sent in before ELEVEN o'clock on TUESDAY, the 31st instant. The Council do not bind themselves to accept the lowest or any Tender. WM. BROOKE, Town Clerk.

Margate, 12th May, 1864.

TO IRON FOUNDERS and IRON BRIDGE BUILDERS.—Messrs. PETO & BETTS are prepared to receive TENDERS from parties desirous of CONTRACTING for the SUPPLYING and FIXING the IRON WORK, wrought and cast, for the SUPERSTRUCTURE of the NEW BRIDGE over the Thames at Pimlico, for the London, Chatham, and Dover Railway (Victoria Improvement). Also for the CYLINDERS for new foundations of same bridge.—Specifications and forms of Tenders can be had, and the drawings seen, by applying at the Office of Messrs. PETO & BETTS, 9, Great George-street, Westminster. Tenders must be delivered within fifteen days of this date. The lowest or any Tender not necessarily accepted.

9, Great George street, Westminster, May 18th, 1864.

THE Local Board of Health for the District of Sheerness, in the county of Kent, are desirous to receive TENDERS from persons willing to CONTRACT to the present time the ORDNANCE SURVEY PLANS of the said District, prepared in 1851, and to make the necessary Survey and Plans for that purpose. Further particulars may be known by personally applying at the Office of the surveyor of the Board, in Trinity-road, Sheerness, on MONDAY, the 23rd MAY, MONDAY, the 30th MAY, or MONDAY, the 6th JUNE, 1864.—Sealed Tenders, addressed to the Clerk, to be delivered, free, at the Office of the Board, Trinity-road, Sheerness, on or before THURSDAY, the 9th day of JUNE, 1864, and before SIX o'clock in the Evening of that day.—By order of the Sheerness Local Board of Health, EDWARD FELKIN, Clerk.

Sheerness, 12th May, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a RESIDENCE, Offices, and Stabling, for the Rev. E. T. CARDALE, at Uckfield, may see the Plans and Specification on and after MONDAY, the 16th MAY, on application to Mr. ALEXANDER CHEALE of Uckfield, to whom Tenders are to be sent, in, or before the 25th INSTANT, sealed, and endorsed "Tender for the Rev. E. T. Cardale's Residence, Offices, and Stabling." The Rev. E. T. CARDALE does not bind himself to accept the lowest or any Tender.

TO BUILDERS.—Persons desirous of submitting TENDERS for the ERECTION of a VILLA RESIDENCE, in the parish of Kingston, near Torquay, for W. Froude, Esq., can see the Drawings and Specification at my Offices, Torquay, on and after FRIDAY, 27th inst. The Tenders must be sent in on or before FRIDAY, JUNE 10th, addressed, "Tender for House at Cockington." Mr. Froude does not bind himself to accept the lowest or any Tender. EDWD. APPLETON, F.R.I.B.A. Architect.

Torquay, May 18th, 1864.

JARROW LOCAL BOARD of HEALTH. SEWERAGE CONTRACT.—The Jarrow Local Board of Health are desirous of receiving TENDERS for the EXECUTION of the whole of the SEWERAGE WORKS comprised in the District of Jarrow. The drawings and specifications may be seen, and every information obtained, at the Office of Mr. T. M. ATKINSON, Borough Surveyor, South Shields. Tenders to be sent in to me not later than NOON on WEDNESDAY, the 25th MAY instant, endorsed "Tenders for Sewerage Works, Jarrow."

CHRIST WAWN,
Clerk to the Jarrow Local Board of Health.

76, King street, South Shields.

TO BUILDERS.—Persons desirous of CONTRACTING for the ERECTION of NEW NATIONAL SCHOOLS and Master's House, at Dalston, near Carlisle, are informed that the drawings and specifications may be seen on and after SATURDAY, the 21st instant, by application to the Rev. E. J. GOODHART, at Dalston. Tenders to be sent to the Office of the Architect, Mr. CHRISTIAN, 8a, Whitehall-place, London, on or before 23rd inst. The Committee do not bind themselves to accept the lowest Tender.

TO CONTRACTORS.—TENDERS are required for MAKING certain ROADS and FOOTPATHS, on the Essex Land Company's Estate, at Leytonstone, Essex.—Plans and specifications may be seen at the Office of Mr. JOHN M. DEAN, Surveyor, No. 6, Cornhill, Bow Grove, Stratford, on MONDAY, TUESDAY, and WEDNESDAY next, between TEN and FIVE o'clock.—Tenders to be delivered at the said Office, on THURSDAY AFTERNOON next, the 26th inst. at FIVE o'clock.

WIGAN LOCAL BOARD of HEALTH.—To SCAVENGERS, NIGHT-SOIL CONTRACTORS, and OTHERS.—The Local Board of Health for the District and Borough of Wigan hereby give notice that they are willing to receive TENDERS from parties desirous of undertaking the following CONTRACT, viz.—The cleansing of the ashpits and cesspools, and the removal and carting away of the contents of the same, as also the removal and carting away of the sweepings from the markets, streets, lanes, courts, highways, and places within the said district. The contract to be for a term of three or five years, at the option of the Local Board. A specification of the work required to be performed may be seen, and forms of Tender had, on application to the Surveyor of the Local Board, at his Office, No. 6, Wallgate, Wigan. Sealed Tenders, entitled "Tenders for Scavenging," must be delivered at the said Office, addressed to Mr. J. L. HUNTER, the Engineer of the Board, by TWELVE o'clock at noon on TUESDAY, the 7th day of JUNE next.

CALEB HILTON, Town Clerk and Clerk to the Local Board.

Wigan, May 18, 1864.

BOROUGH of BRIGHTON.—To CONTRACTORS and OTHERS.—Notice is hereby given, that the Town Council will receive TENDERS from any person or persons as may be willing to Contract for the ERECTION of THREE GROYNES on the Beach, in the said Borough; namely, one opposite Charlotte-street, one opposite Montpelier-road, and one opposite Dudley-place, according to plans and specification, which may be inspected at the Office of the Borough Surveyor, at the Town Hall, Brighton, where all other information and forms of Tender may be obtained. The contract to be for a term of five years, at the option of the Council. Tenders, addressed to me, and endorsed "Tender for the Erection of Groynes," must be left at my Office, at the Town Hall, before TEN o'clock on MONDAY, the 30th day of MAY, 1864. Power is reserved to accept the lowest or any Tender.

DAVID BLACK, Town Clerk.

Town-hall, Brighton, May 18th, 1864.

WEAVER NAVIGATION.—To CONTRACTORS.—The Trustees of the River Weaver are prepared to receive TENDERS for the CONSTRUCTION of a SEA WALL at Weston Point, near Runcorn. Plans and specifications may be seen at the Company's Office, No. 1, instant. Sealed Tenders to be delivered at the Office of the Trustees, No. 1, on or before the 4th day of JUNE next. The lowest or any Tender not necessarily accepted.

Engineer's Office, Northwich, May 10, 1864.

THE Committee for RE-SEATING and RESTORING the PARISH CHURCH of Aldborough wish to obtain TENDERS for the above work.—The plans and specifications may be seen by applying at the Vicarage between the hours of TEN a.m. and FIVE p.m. on any week-day from MAY 9th to MAY 31st. Tenders to be sent in to the Secretary, H. CHAPMAN, Esq. Aldborough, Boroughbridge; not later than TUESDAY, JUNE 7th. The Committee do not bind themselves to accept the lowest Tender.

Aldborough, 18th May, 1864.

TO CONTRACTORS, ENGINEERS, and OTHERS.—Notice is hereby given, that the Southampton Harbour Board is prepared to receive TENDERS for certain works to be performed in EXTENDING the WOODEN JETTY at the TOWN QUAY, and for the CONSTRUCTION of an additional TRAMWAY thereon.—Also for PROVIDING and FIXING FLOATING IRON PONTOONS, LANDING STAGE, &c. at the ROYAL PIER, and for REPAIRS.—Plans, Specifications, and Form of Tender, and all further information, may be obtained on application to Mr. GEDDES, Surveyor to the Board, at his Office at the Town Quay, on and after the 26th day of May; and separate Tenders for the several Works must be sent to my Office, 5, Lower Bugle-street, on or before the 24th day of JUNE next. No pledge is given to accept the lowest or any Tender.—By order of the Board,

WILLIAM FARRAND, Clerk.

Audit House, Southampton, 17th May, 1864.

TO BUILDERS and CONTRACTORS.—Parties desirous of TENDERING for the NEW SEATING and other WORKS to be done in Osborne Church, near Canterbury, Kent, may see the plans and specifications on and after the 26th inst by applying to the Parish Clerk, or at the Office of Mr. WILKINSON, Surveyor, Grange-street, Canterbury. Tenders to be sent to the Churchwardens, on or before SATURDAY, 28th inst. The lowest or any Tender not necessarily accepted.—FOR SALE, the whole of the Interior FITTINGS and other Materials.—Apply to the Churchwardens, as above.

TO BUILDERS.—Persons wishing to TENDER for the ERECTION of a new TOWN HALL, Congleton, may see the Plans, Specifications, and Conditions, and obtain a copy of quantities, on application to Mr. MOORHOUSE, the Town-clerk of Congleton; or to the Architect, on or after the 1st day of JUNE next. Sealed Tenders to be delivered to the Architect, on or before the 12th of JUNE next.

Conditions of Tendering.—1. The Town Council do not bind themselves to accept the lowest or any Tender. 2. The Contractor for the building will be required to furnish two sureties for the due performance of the contract. 3. The Council do not guarantee the quantities. EDWARD W. GODWIN, Architect,

21, Portland square, Bristol.

TO BUILDERS.—Builders desirous of CONTRACTING for the ERECTION of PREMISES at Everlands, near Sevenoaks, Kent, can apply by letter only, for particulars, at which the bills of quantities will be found, to Mr. HARRY R. NEWTON, Architect and Surveyor, 6, Argyle-street, Regent-street, London, W.

TO BUILDERS.—TENDERS are required for TAKING DOWN Four Cottages, and ERECTING new WAREHOUSE and Manufactory, and other Works, at Mr. GROVES' Establishment, Lower-marsh, Lambeth. The Drawings, Specification, and Conditions may be seen at the Office of Mr ROBERT PARRIS, No. 5, Waterloo-place, Lambeth, on and after TUESDAY, the 24th of MAY instant.

TO BUILDERS and CONTRACTORS.—The Building Committee of the St. Thomas Lunatic Hospital are desirous of receiving TENDERS for the ERECTION of a new LUNATIC HOSPITAL on a piece of land near the Topsham Barracks, in the parish of Heavitree, Devon, according to plans and specifications which may be seen at my Office. Sealed Tenders are to be delivered to me on or before MONDAY, JUNE 13th, 1864, endorsed "Tender for Lunatic Hospital." The Contractor will be required to provide two sureties for the due performance of the contract. The Committee do not bind themselves to accept the lowest or any Tender, and no payment will be made for estimates.

W. F. CROSS, Architect, Queen street, Exeter.

May 2nd, 1864.

BUILDING MATERIALS.—The Guardians of the Poor of the Whitechapel Union are prepared to receive TENDERS for the PURCHASE of a BUILDING in Thomas street, Mile End New Town, NE forming part of the Workhouse of the Union, containing many Lots of excellent stock and other bricks, stone and other stairs and landings, tiles, lead, &c. and other usual materials. To be pulled down and carted away. May be viewed between the hours of Ten and Four daily. Tenders must be delivered at my Office before FOUR o'clock on MONDAY, the 23rd MAY instant. Forms of Tender may be had on application at the Workhouse; no bidding will be noticed or received. The Guardians do not bind themselves to accept the highest or any Tender. By order,

G. ADAMS FARR, Clerk.

Clerk's Office, Whitechapel Workhouse, 11th May, 1864.

TO BUILDERS, CONTRACTORS, and OTHERS.—The Directors of the West Worthing Investment Company (Limited) are desirous of receiving TENDERS for the ERECTION of an HOTEL and BUILDING upon the Company's property at West Worthing, in the county of Sussex.—Plans, sections, and specifications may be seen at the Office of the Architects, G. A. DEAN, Esq., 1, Lancaster place, Strand, London, W.C. on and after SATURDAY, the 21st instant. TENDERS, addressed to the Secretary, and endorsed "Tender for Hotel," must be delivered at the Company's Offices on or before ONE o'clock on TUESDAY, the 31st instant. Security will be required for the due performance of the Contract, and the Directors do not pledge themselves to accept the lowest or any Tender.—By order,

Offices, 27, Great George-street, Westminster, S.W.

12th May, 1864.

TO SEWER CONTRACTORS.—The Board of Works for the Fulham District, in the county of Middlesex, hereby give notice that they will be ready, at the Board Meeting to be held at Broadway House, Hammersmith, on WEDNESDAY, the 1st day of JUNE, 1864, at TEN o'clock precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and completely FINISHING a certain steel 1 BRICK SEWER, of about 9,125 feet in length, and other WORKS connected therewith, in the Parish of Fulham, from Walham Green Church, to the Great Western Road at North End. Plans, specification, and detail drawings of the works can be seen and examined, and the form of Tender may, with other particulars, be obtained at Boulney House, Hammersmith, between the hours of TEN a.m. and FOUR p.m., on any day previously to the 31st day of MAY, 1864. The sealed Tenders are to be received by the said Board, on or before TEN o'clock of the said 1st day of JUNE, marked on the outside "Tender for Sewers;" and the party whose Tender may be accepted will be required to enter into a Contract and Bond, with two sufficient sureties, for the due performance of the undertaking; such Contract and Bond to be prepared by the solicitor to the Board, at the expense of the Contractor. The Board does not pledge itself to accept the lowest or any Tender.—By order

W. LOVELY, Clerk.

TO BUILDERS.—Builders desirous of TENDERING for the ERECTION of a New CHURCH at Shalden, near Alton, Hants, may see the drawings and specification at the Rectory House, Shalden, and obtain forms of same from Bentley Station, on the Basingstoke and Alton Railway, with the living at Bentley Hall, from MONDAY, the 23rd, to TUESDAY, the 31st instant, both inclusive, between the hours of Nine and Four. Sealed Tenders, directed to Mr. JAMES LOLTON, at or before WEDNESDAY, JUNE 8th next evening. Neither the lowest nor any Tender will necessarily be accepted. The contractor, if required, must be prepared with two good and approved sureties, to enter into the usual legal bond for the due fulfilment of his contract.

Bentley Hall, May 7, 1864.

PERSONS desiring to TENDER for the ERECTION of a NEW CHURCH at BRITONFERRY, may see the Drawings and Specifications at my Office at Llandaff, on and after the 11th day of MAY. Sealed Tenders are to be sent to the Rev. D. LEWIS, Britonferry, Glamorganshire, by SIX o'clock p.m. on FRIDAY, the 10th of JUNE. The right of rejecting all or any of the Tenders is reserved. JNO. PRICHARD, Diocesan Architect.

Llandaff, May 11th, 1864.

30 and 31, PRINCES STREET, SOHO, LONDON, W.

MEDWAY LIME and CEMENT WORKS. TO BE DISPOSED OF, the well-established BUSINESS, now in full operation, of the MEDWAY LIME and CEMENT WORKS, situate at Halling, a station on the North Kent Railway, Kent, on the banks of the river Medway, together with the Machinery, Utensils, &c. The Works comprise a wash-mill with drying-floor, three cement kilns, a mill with three pairs of stones and crushing rolls, engine house with pair of high-pressure steam-engines equal to 9 horse power, three steam boilers, chimney shaft, range of eight dome-head lime-kilns, a tunnel-kiln, spacious chalk-pit, landing-wharf and stage next the Medway, with hoist worked by steam power, &c., the land occupied by the buildings being in extent 8a. 2r. 2p. The South-Eastern Railway intersects the property, from which a siding has been made. The Works have a high repute for the quality of the cement manufactured, for which there is an unlimited demand. In connexion with the property are a Farm House, with Out-buildings, 23 Cottages, a Manager's Residence with garden, and several pieces or parcels of Land, containing in all 135a. 3r. 20p.; and also two Freehold Houses at Halling.—For particulars, apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

TO CARPENTERS, BUILDERS, and OTHERS.—TO BE DISPOSED OF, with immediate possession, on very reasonable terms, an old-established BUSINESS, in the above line, having been carried on by the present proprietor for upwards of fifty years, situate at the east end of London, comprising spacious workshops, and every convenience. Also commanding large water-side frontage. Rent, 25l. per annum.—For further particulars, address, by letter, C. M. Mr. Hicks, 100, Minories, E.C.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, alkalies, or water; and the facility with which the only joint required can be made in bands of from 2 to 30 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union joints, Flasks, Bottles, Bowls, Toilet trays, Curtain rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES,
WHARF ROAD, CITY ROAD, LONDON.

THE PRIZE MEDALS,

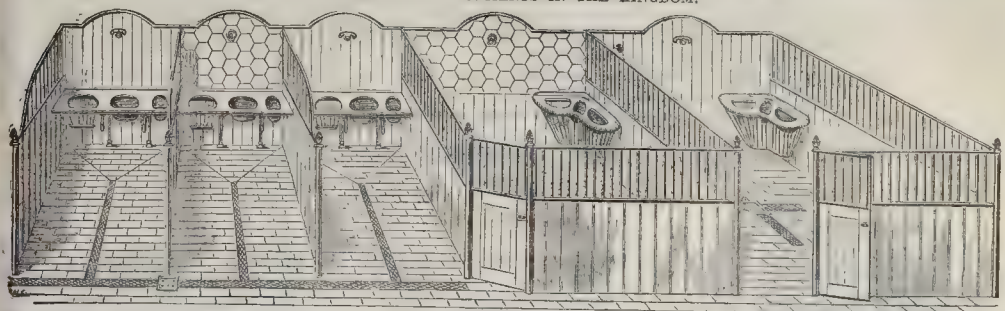
LONDON, 1851. PARIS, 1855. LONDON, 1862.

AWARDED TO

COTTAM & COMPANY,

No. 2, WINSLEY-STREET, LONDON, W.

FOR PROGRESSIVE AND GENERAL IMPROVEMENTS IN



STABLE FITTINGS AND HARNESS BRACKETS.

PATENTEES AND ORIGINAL INVENTORS OF

THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,

PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM.

SECURITY FROM ACCIDENT by the use of the Patent Halter Guide and Improved Curved Top-plate; PROMOTION of HEALTH, COMFORT, and CONDITION, by the cleanliness and power of resisting infection of the Mangers and Troughs; and also of the Patent Drop Cover, to curtail the quantity of water to be imbibed. ECONOMY in the USE of FOOD, from the improved formation of the Fittings, and by means of the Patent Portable Seed-box, are some of the peculiar recommendations of Cottam's Patent Componised, Enamelled, and Galvanized Iron Fittings for Stalls and Loose Boxes.

COTTAM'S PATENT COMBINED SADDLE and HARNESS BRACKETS; IMPROVED SURFACE GUTTER, WITH MOVEABLE SAFETY COVERS; Sanitary Traps, Cheap and Durable Corn-bins, and every Article requisite for the Stable and Harness-room.

IRON GATES, FENCING, and HURDLES MADE by MACHINERY.

COTTAM'S newly-invented REGISTERED NOISELESS MANGER SHACKLE and GUIDE FOR HALTER-STRAP, and IMPROVED VENTILATING HARNESS BRACKETS, are only to be obtained from the Inventors, and can be seen in use at their Manufactory.

COTTAM & CO. exhibit for inspection, at their Iron Works, 2, Winsley-street, W., an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.

ILLUSTRATED CATALOGUES and LITHOGRAPHS free, on application to COTTAM and CO. 2, WINSLEY STREET, Oxford-street, London, W.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B. WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

WROUGHT IRON WINE BINS.

FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

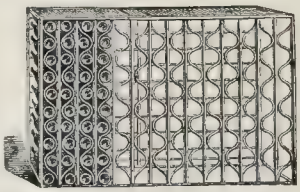
Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,



Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.

FARROW & JACKSON,

18, 17, and 16, GREAT TOWER STREET; and 1, HARP LANE, LONDON, E.C.

FACTORY, 57 and 58, MANSELL STREET.

PATENT CLIMAX DOOR SPRINGS,

FOR SINGLE AND DOUBLE ACTION DOORS.

PATENT CASEMENT STAYS, FASTENINGS, AND CUPBOARD TURNS,

GOTHIC, DROP, AND OTHER DOOR HANDLES.

BRASS AND IRON LOCKS OF EVERY DESCRIPTION.

Builders', Cabinet, and Ship Brass Founders.

WILLIAM GREENWAY & CO.

MANUFACTURERS, BIRMINGHAM.

THE FURNISHING OF BED-ROOMS

HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed room Furniture than is usually displayed, and that to judge properly of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed room Furniture in the different styles.

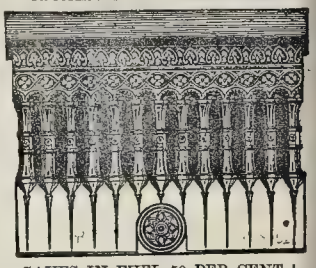
Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.

The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.



Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They particularly call attention to their Patent Spring Mattress, the Sommier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196 197, 98, Tottenham-court-road, London.

PATENT HEATING and VENTILATING APPARATUSES,

THICK ZINC ROOFING on IMPROVED PRINCIPLES,

JAMES W. TYLER, CONTRACTOR,

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER close to Victoria Tower.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

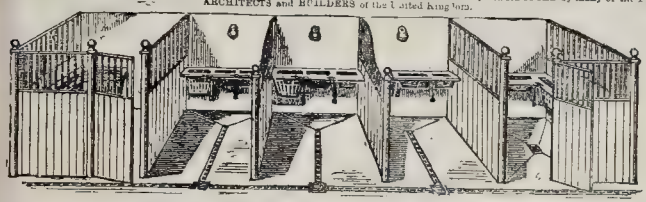
MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.
MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

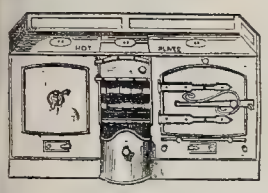


Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.



These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

J. BARTON, having entered upon the extensive Premises, No. 370, Oxford street, adjoining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well-selected STOCK of STALL and LOOSE-BOX FITTINGS, HARNESS ROOM REQUISITES, &c.; also to invite inspection of the newly-erected Practical Stable, now on view. Illustrated Catalogues on receipt of Four Stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,
WHOLESALE AND MANUFACTURING IRONMONGERS,
38 and 65, York-street, Westminster.

BROWN & GREEN'S
PATENT KITCHEN RANGES.
PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

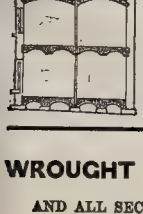
THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)
WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

NUT

PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.



New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c., or to any Design.

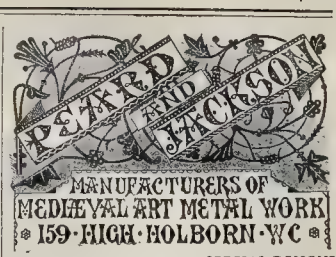
THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

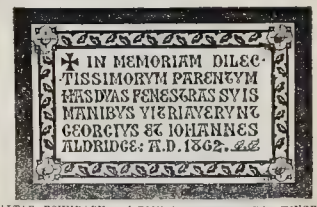
THE DENNETT ARCH.



Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.



"GEO. GILBERT SCOTT, 20, Spring Gardens London."

CHUBB'S
WROUGHT IRON FIRE-PROOF DOORS AND FRAMES,

SMOKY CHIMNEYS,
S. DEACON

Respectfully invites the attention of Architects Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage stamp, by

IMPROVED ANTI-CORROSION PAINT, 28s. to 34s. per Cwt.

A preservative paint is extensively used for all kinds of work in exposed situations, on Brick, Stone, Compo, Iron, Iron Bridges, Conservatories, Greenhouses, &c. and is easily laid on by any ordinary workman.

MILLED LEAD, IN SHEETS AND PIPES, OF ALL KINDS. OLD LEAD BOUGHT OR TAKEN IN EXCHANGE.
LIFT PUMPS, WATER CLOSETS, AND PLUMBERS' BRASS WORKS OF ALL KINDS.

NET CASH.

NOTICE TO ARCHITECTS AND THE TRADE.

WEST-END BRANCH, EGYPTIAN HALL, PICCADILLY.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTURERS OF

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,

For Lighting and Ventilating Public and Private Buildings.

J. D. & SONS beg most respectfully to inform Architects and the Trade, that having been solicited to open a West-end Branch, they have taken the DUDLEY GALLERY, EGYPTIAN HALL, PICCADILLY, and at an enormous outlay they have made it replete with every description of lighting mediums, including REGISTERED DESIGNS of MEDIEVAL GAS FITTINGS, CRYSTAL, BRONZED, ORMOLU, and ELECTRO PLATED Chandeliers, Brackets, Vestibule Lights, Bronzed and Gilt Statuettes.

SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements. Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music-halls, and Public or Private Buildings with Gas, &c.

The usual trade discount allowed, as at their

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH, CITY.

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of

SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS;
SMITH'S PATENT WEATHER-TIGHT WATER BAR; and
SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS;

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Fatentee, 69, Frances street, Leicester-square, London, and SOLD ONLY are WARRANTED.

TO BUILDERS AND OTHERS.

WILLIAM SKETCHLEY would call attention to his SAWING, PLANING, and MOULDING TABLE. It is suited for sawing 12-inch deep and planing 11 inch deep, and moulding 8-inch wide. It is also fitted with drunken saw and slide cramp for tenoning, &c. &c. The price of this to prepare for flooring 7*l*. N.B. The saw can be applied to any saw table, and will prepare flooring in a first-class manner.—For further particulars apply to WILLIAM SKETCHLEY, Great George street, Weymouth.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.

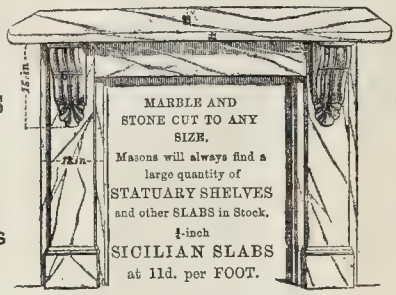
BOX STONE CHIMNEY PIECES for 5s. 6d.

Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS

in great variety, equally low in price.]

MASONS' WORK OF ALL KINDS CONTRACTED FOR,



AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF

500 CHIMNEY PIECES

always to choose from.

PRICE LIST ON APPLICATION.

MARBLE BOX CHIMNEY PIECE for £1 5s.

First-class Bed-room ditto, £1 10s.

FIRST-CLASS

TRUSS MARBLE CHIMNEY PIECES from £2 5s. to £3 5s.

A WELL-CARVED

STATUARY CHIMNEY PIECE,

with 13½-inch Piers,

suitable for a Drawing-room, which must be seen to be believed,

FOR THE SUM OF £6.

Net Prompt Cash.

PRICE LIST ON APPLICATION.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,

12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

Sir John Charles Dalrymple Hay, Bart. M.P.
James Mackie, esq. M.P.
Sir Lawrence Peel Hart, M.P.
Sir Henry Strakey, Bart. M.P.
William Dargan, esq.
Henry Farquhar, esq.
Sir John Gray.
John Horatio Lloyd, esq.
Hon. William Napier.
Hon. Henry Petre.
Sir Charles Rich, Bart.
Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, East End, 54, Old Broad street, E.C.), Office of International Financial Society.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—

1st. Of land estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private Royal Charter, Commissions of Sewers, Drainage, or other sufficient local authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

Temporary advances will be made on landed estates, and on houses in course of creation, with or without the deposit of title deeds; and they undertake the negotiation of special investments.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32 Charing cross London S.W.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 43 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

VOL. XXII.—No. 1111.

Stables.

BEFORE attempting to design stables, it is very desirable that the architect should know something about horses. It is an easy thing of course to take the plan of stables already erected as a guide; to see the minimum width of a stall; the smallest-sized doorway that has sufficed; what description of drains have been allowed to pass muster; and that no provision at all for ventilation has been ordinarily the rule; and on these data, without the exercise of a thought, to put up buildings where horses may be protected from the weather, and which, being according to custom, may bring no blame on the designer or builder. That they will tend to make the life of a noble animal miserable, induce diseases, lead to accidents, and indeed shorten that life, is not perceived, and so they escape comment. The horse is an ill-used animal, spite of exceptions, and yet if man's friends should be cared for, in what direction could kindness more properly be applied? Even when dead, the horse is valuable. At one time, "a dead horse" was a term expressive of something of very little value. In these days—in the metropolis especially—the slaughtering of horses has been brought to such a degree of perfection that few portions of these valuable servants are without a profitable use. Not a part of the bones, the sinews, flesh, fat, skin, or hair, is without a regular and advantageous market; and the most miserable carcass will now bring as sure a price as any other mercantile commodity. There is in fact, in some quarters, an idea that the London horse-slaughterers, in their zeal for profit, appropriate parts of dead horses in a way which it is not agreeable to think of.

In the United States the mortality of horses has been enormous. We have yet no reliable statistics from the Southern States; but, as regards the North, Dr. Turner, the chief veterinary surgeon of the army, reports, that in the Eastern department alone, the mortality is 3,000 per month, and an equally large number are condemned. These seventy-two thousand horses per year cost the Government nine millions of dollars. This one of the items of the heavy bill serves to indicate the cost of war. In most of the large American cities, no doubt, the same degree of care is used to make profitable the carcasses of dead horses as there is in this country. Even on the battle-fields the trade seems to be successfully carried forward. Much, of course, is wasted for the want of a near market; but it is said that the contract for the dead horses in the Federal army has been at 7s. 4d. per head. Last year the contractor cleared 12,000*l*. There the horse's shoes are first pulled off, which are worth about 4s.; the hoofs fetch 8s., the tail brings 2s. The tallow is not worth much; the hide is worth something; and the shinbones are sold to be converted into cane-heads, knife-handles, &c.; so that even in those situations a "dead horse" is not a matter to be altogether despised.

It is not, however, of dead horses, but for live ones that we would speak, and of their better housing. Mr. Edward Mayhew has recently published a work on "Horse Management," wherein, after saying much in favour of more thoughtful and benevolent treatment of horses than now prevails, he protests against the present system of stable-building.* Our readers will be the better for knowing something of his views, even if it be considered that his desire to provide for the well-being of the horse carries him too far. Of 4 feet 6 inches, or even 5 feet stalls, he will not hear. 3 feet 6 inches is the width of many a stable-door. Improvers have urged that the stable-door should be 8 feet or 8½ feet high, and 5 feet wide; but even this Mr. Mayhew thinks insufficient.

When a horse is led, not ridden, out of the stable, the man grasps a rein, and, walking by the side of the animal, servant and slave pass the threshold together. The 3 feet 6 inches of clear space have to permit the passage of two bodies at the same moment; therefore, dividing the allotted width, and giving half to each, it allows 1 foot 9 inches as the share of either.

A person of moderate stature, and in average health, will measure, across the shoulders, from 17 to 20 inches. An animal of moderate size can barely squeeze through a clear gap of 22 inches width. Then, taking the man at the lowest standard, and adding 17 to 22 inches, we obtain 39 inches, as the smallest amount of room which servant and quadruped could manage to pass through. "Such a close measurement, however, supposes the two living beings to touch one another, as well as to graze the sides of the passage. Against such gross usage, the innate dignity of cockade, leathers and riding-coat, would alike protest!" A width of 3 feet 6 inches however, allows 1 inch to divide the door-posts from the man and from the horse; while an inch also remains to separate the domestic from the simplicity which it is conducting. The margin is not very ample; and both creatures must march with uncommon steadiness for neither of the animals to touch the posts, or to rub against the other. Five feet, certainly, afford more ample quarters. Through such a frame both man and horse, supposing each to be quietly disposed, may pass with ease. Even this limit, however, will not allow the groom to dispense with every care. An animal may, reasonably, be delighted, when he sniffs the fresh air; and may be permitted to perform a few pranks, as he quits positive stagnation to make the nearest approach to freedom which his enslaved condition can sanction. If, during one of these movements, the trunk should be inflected more than the 7 inches, which the 5 feet allow, or the animal, influenced by the impetuosity of excitement, should come in contact with the door-post, the consequence may be fearful. The possibility of check, certainly, does not enter the thought of the joyous creature. The blow is proportioned to the heedlessness which induced it. A bone can be fractured on such an occasion; nor is it an unusual accident. Most horses, which are beheld with one "hip down," have had the deformity produced by striking against the post of the stable-door.

Hear our author on another point.

Horses, says Mr. Mayhew, when disposed to remain stationary, always select ground where the fore-feet can occupy a position lower than the hind-legs. In stables, this inclination is reversed, the hinder limbs invariably resting on an inferior level to what the fore-feet range upon. The motive upon which the dictates of nature are outraged in stables is the facility which a floor slanting in the backward direction affords for surface moisture to flow into the open gutter that runs along the extreme margin of the gangway. Science, evidently, has not been consulted in an arrangement which sacrifices the health and the comfort of an inhabitant of the stall, to obtain so obvious, gross, and poor an advantage. Stables, evidently, were built only to please the fancy, and propitiate the prejudices of ignorant proprietors. No thought was bestowed upon the quadrupeds such edifices pretended to accommodate. The consequence is seen in the discomfort, torture, and the speedy decline of lives which are passed per-force within one of these notorious charnel-houses.

Knowing the object desired, the reader will naturally expect to be informed whether dryness is secured by the present arrangement? When answering this inquiry, the author describes the general plan, according to which the floors of most stables are laid down. The pavement of the stalls is composed of small hard bricks, known as "Dutch Clinkers." Bricks, however nicely they may be placed, cannot form an absolutely smooth or even surface. They must present spaces in which fluid will be retained; and, being porous, bricks cannot prevent effluvia from rising through their substances, or cannot hinder liquid from percolating into the soil on which they rest. The urine acquires acrimony as it corrupts beneath the pavement, and this makes a renewal of the flooring of a stall an efficient reason for ordering the inhabitants of a large building to be removed, since the pavement will have to be disturbed.

To procure from the excretion the greatest possible amount of noxious effluvia, the liquid is made to flow gently over an open, a rough, an uneven, and a slanting surface; thus subjecting the greatest possible quantity to the direct action of the atmosphere. Should not the whole change be thereby accomplished, the fluid slowly drains into an open gutter, which slopes so gradually that its contents frequently refuse to move. Had the architect, who originally laid down the plan of a modern stable, designed to make the interior poisonous, it would have been difficult, having no more active agent at command, for him to have conceived means better calculated to fulfil his object.

The groom, to warm the place, stops up every crevice through which the vapour could escape, or pure air could find admission. Many stablemen also exclude the light, under a groundless notion, that horses thrive best when in the dark. Darkness does not necessarily lead to sleep,—it simply disables one of the senses; thereby animal life is deprived of a harmless enjoyment, while at the same time the exclusion of light causes the eye to shrink from the glare of day; while the continuance of the evil is likely to induce blindness. Hours of weariness, passed in a confined space, and within a tainted atmosphere, are strange means when employed to promote extraordinary thrift;—more especially when we consider that the inclination of the floor forbids rest to the feet, while the exclusion of light incapacitates all visual recreation.

Reading of the floors of stables in Mr. Mayhew's pages, we are reminded of what is not generally known, and is so curious a circumstance, that, though not bearing on our present purpose, we are led to mention it. In years gone by, this country had to depend on its own resources for *saltpetre*, and in 1625, according to Mr. W. H. Hart, who last year brought the subject before the Society of Antiquaries, "a royal proclamation was issued, which states that our realm naturally yields sufficient mines of saltpetre without depending on foreign parts; wherefore, for the future, no dovehouse was to be paved with stones, bricks, nor boards, lime, sand, nor gravel, nor any other thing whereby the growth and increase of the mine of saltpetre

* The Illustrated Horse Management. Embellished with more than 400 engravings. By Edward Mayhew, M.R.C.V.S. London: W. H. Allen & Co. 1864.

might be hindered or impaired; but the proprietors were to suffer the ground or floors, as also all *stables* where horses stood, to lie open with good and mellow earth, apt to breed increase of the said mine, and that none hinder any saltpetre-man, lawfully deputed, from digging or working any ground for saltpetre. These saltpetre-men were commissioned by letters patent from the Crown to dig in all places where saltpetre grew, and so to amass a store for the king's use, the making of gunpowder being then a monopoly." These powers were often used arbitrarily, but with that we have nothing to do.

Let us now see how our author would have his stables built and fitted up. He maintains that bricks and mortar, however expensive such articles may be, are about the most economical purchases which the horse-owner can invest his cash in. One or two deaths in a prime stud may cost more dearly than would the largest of the proposed buildings. The money which shall be expended upon the improved stable, must not be viewed as cash sunk in an unremunerative object; but as a sum invested in that which will immediately yield an exorbitant interest. It will decrease the veterinary surgeon's bill; it will conserve the health and prolong the usefulness of the horse; it will put the animal in better heart, and will enable the proprietor to dispense with those repeated purchases which now occasion the horse-owner to stare at every fresh steed he chances to meet, and to inquire "if it be for sale?" Mr. Mayhew says rightly,—When we wish to raise any erection, we should, before we begin to plan, thoroughly comprehend the purposes which the new edifice is to serve. A stable is not the home of a horse, in the same sense that a house is the home of a human being. The animal has not one room for day and another for night. It cannot retire; it must remain in its compartment; and we must do what we can to render the limited space a healthful abode.

In the first place, he maintains, everything like a stall must be abolished; the uses of such abominations being supplied by loose boxes. Each box is to be 18 feet square; of these there are to be six, ranged in pairs; three upon either side of the interior. Every box is to be rendered dry and sweet, by six deep gutters, three on either side, and all emptying into a central branch drain, which discharges its contents into a main drain, running through the length of the entire building. The gutters commence 18 inches from the side divisions of the boxes; the first is situate 3 feet from the external wall. Six feet divide the first from the second gutter; the same space separates the second from the third gutter, which is removed only 3 feet from the central partition.

The flooring or pavement, between the gutters, is arranged in gentle undulations, like the walks in a garden. It is raised 3 inches higher in the centre of each division, than where its borders terminate in the gutter. The two pieces of pavement, at either end of the box, begin at the elevation of 3 inches, and sink to the level of the lowest surface as they approach the gutter. Thus, every portion of the pavement will incline one in twelve, a fall of fully sufficient magnitude to allow of the speedy disappearance of fluid, which is always ejected with force and in quantity. The gutters all terminate in "stink traps," which give admission into the branch drains; these last, as well as the main drains, consisting of circular earthen pipes

Each gutter should be 2 inches wide and 2 inches deep. They ought to commence at the depth of a Dutch clinker from the surface, and be covered by a perforated loose iron grating, the holes in which are a quarter of an inch wide, 1 inch long, and the last distance asunder. Thus, should the horse, when down, lie over one of these gutters: the body cannot then repose on a good conductor of heat.

The openings, which are ample to permit the escape of all liquid, are purposely made small; because rats and other vermin, too frequently, enter stables by the drains. It is by no means unusual for such pests, where they are numerous, to attack and gnaw the hoofs of living animals.

Neither the pipes, the gutter, nor the clinkers, are placed within or rest upon unprepared soil. Such may be the usual plan after which most stables are now built; for the drainage of these places does not generally extend beneath the surface. The pavement of the contemplated stable, however, is to be raised 2 feet above the level of the ground on which it is erected: for the entire space which the structure will occupy, the soil is, in the first instance, to be removed to the depth of 1 foot. After the foundations have been properly laid, the walls are then to be raised till they are built up 2 feet above the natural level of the surrounding surface. A layer of large flints, or of coarse brick rubbish, is then to be thrown in: this layer is to be 2 feet 6 inches in thickness. Within this, the main and the branch drains are to be arranged; though the principal drain will also have, towards its termination, to be sunk into the earth. The remaining 6 inches are to be filled in with coarse sand; and upon this the gutters are to commence.

The contemplated structure will be thus thrice drained. First—there will be the deep tubular main and branch drains; next—there is the sand and brick rubbish; while, lastly—there is the surface drainage, effected by the grated gutters. So much pains has been consciously bestowed upon the dryness of the building, because nothing will, in the end, prove more detrimental to the horse than confinement in a damp abode. Not only does perfect drainage conserve the health of the equine inhabitants, but it likewise tends to preserve the bricks, the mortar, and the fittings, that should adorn every stable.

According to the view, which we are enabled to transfer from Mr. Mayhew's volume,* there is a free, but covered space, 12 feet wide, extending all round the building. The soil of this free space, covered ride, or ambulatory, should also have been removed, and subsequently have been filled up, after the plan already described, as necessary for the interior of the stables. It need not, however, be paved with clinkers, as sand forms a better ground for a horse to exercise upon than can possibly be made with the hardest of known bricks. The roof, having sheltered the ride, terminates immediately over a metal gutter. This gutter communicates with five pipes upon the western and upon the eastern sides, with two pipes upon the southern, and with three upon the northern aspects of the building.

The roofing of the ambulatory is upheld by thirty-one posts, each 12 feet high, and the same distance apart. Between every two of these posts, on all sides of the stable save the front, are placed smaller uprights, which reach only to 6 feet. By these smaller posts are supported one end of three moveable bales on either side, the opposite extremities of the bales resting against the larger posts; each bale being 6 feet long, and reaching from the small uprights to the main supports. The first bale is 1 foot from the ground; while the others are at equal distances, and so placed as to leave 4 inches of clear pole to project above the highest rail.

When returned to the stable the horse does not enter solitary confinement. Its loose box is 18 feet square, and is enclosed by a fence 7 feet high. Only a height of 4 feet of this partition is composed of close 1½-inch boarding. At that height, a stout rail, having its edges rounded, is fixed upon the topmost edge of the wood-work. From this rail spring round iron bars, placed 3 inches asunder, and having the higher extremity inserted into another rail, which is also rounded.

The boxes have each a distinct entrance. The doors are fixed in the wall, and open upon the ambulatory. Each entrance is 9 feet high and 6 feet 6 inches wide; all sharp edges and projecting iron work, as hinges, latches, locks, &c., being strictly forbidden. Such things often injure animals, while in the act of passing through these openings, and should never be permitted to project in any well-managed establishment.

The folding doors are divided into two parts, though not absolutely in the centre, since the lower portion extends only 4 feet from the ground. The upper part can be thrown wide, without releasing the quadruped. The ventilation is, thereby, rendered far purer, while the captive is indulged with a more animated view than the walls of the interior can afford. The quadrupeds, says Mr. Mayhew, with a poetical view of the subject that distinguishes him, will protrude their heads through such spaces, and remain in that position for successive hours, "looking the pictures of mild contentment, and contemplating liberty, which a generous nature appears to have relinquished almost without regret. A simple creature may here in shade enjoy the summer breeze, as it blows aside the forelock; for, if man is, by his position, forced to confine the steed, he is not compelled to aggravate the sufferings which necessarily attend the condition of captivity."

This is the key-note of the book before us, and we cordially recommend it for a wide consideration.

* See p. 374.

FRENCH AND ENGLISH PAPER-HANGINGS.

ORNAMENTAL art seems to exist by necessity: it grows out of the very constitution of man, and is almost as characteristic of him as any quality which he possesses. It has been said that man is the animal that worships,—that he is the animal that cooks his food,—and that he is the fire-making animal: hence the affirmed facts, that all men worship, while no other animals do; that all men cook food, while the lower animals do not; and that all men make fire, while the brutes are destitute of the power necessary to their doing so, are each characteristic of man, and would furnish what scientific men term "essential characters," by which he might be known.

Might it not with equal truth be said that man is the animal that produces ornaments? Does not the savage ornament his bow? and even the arrows which he is to sacrifice to his enemies? The paddle of the canoe, the club, and even the skin of the body, are marked by flowing lines, arranged in fantastic ways, or with chequers or zig-zags, which are intended to render the object thus treated more beautiful. The most uncivilized,—those who have not even the simple arts,—trace out forms with the sharp points of stones upon the fruit-shells, which are their sole domestic utensils. In civilized life of every caste, and of every shade of development,—whether it have arisen in the east or west, in Europe or in the Asiatic countries,—we find ornamental art of some description: it is true that it has had but a feeble development in some countries, yet from none is it absent: hence it may be said of man with propriety that he is the ornamenting animal.

This desire for ornament seems to arise out of the very constitution of man; but as that which addresses the taste is not generally considered to have its origin in laws such as those which govern the physical world, but is the result of caprice, it is said to have its origin in fancy rather than in the intellect: hence it would be inferred that the ornamentist should have great fancy, but should be neither a profound nor philosophical thinker.

While fancy has much to do with the production of ornament, reason also exercises its control over the forms and combinations of lines produced; and, however little attention may have been given to this subject by persons generally, it is yet plain that reason modifies the forms

enerated by fancy to such an extent, that both ...e character of the ornamentist, and of the people who appreciate his works, can be, to a ...reat extent, discovered from the ornaments ...hich he produces.

The writer recently visited the Continent with ...e view of ascertaining the nature of the ornamentation which is this year most prevalent ...pon manufactured articles, especially upon ...all-papers, and visited most of the large paper-...anging manufactories of Paris. This extended ...isitation of the factories of Paris could not fail ...o afford knowledge of the present state of ornamental art in the great capital of the Continent; ...at the result of the knowledge gained is what ...e wish to consider, which is the firm conviction ...hat the difference between the art of the Parisians ...hd that of ourselves may be traced to differences of mental constitution.

It cannot be justly said that France has no ...reat thinkers. Its schools of philosophy and its ...any scientific discoveries testify to the profundity of many French minds. Yet while our neighbours have their great men of science, ...ey are not as a whole a hard-thinking people. ...he French are generally tolerably well educated, and few seem to be without the elements ...f secular knowledge; yet, as a whole, they love ...easure rather than thought, gaiety rather than ...earning, and seek excellence in handicraft ...ather than knowledge of the laws which govern ...he various operations which they perform.

The numerous pavilion *cafés* of Paris, the ...ancing gardens, and the numberless other ...laces of amusement in which the city abounds ...estify to the favour with which places of recreation and gaiety are received by the French; for ...hese arise out of the very desires of the people, ...nd are maintained by their partiality to the ...musement thus furnished. The character which ...aintains numerous places of gaiety could not ...ail to encourage show in whatever way it might ...anifest itself. The lavish use of jewelry, and ...f personal adornments generally; the employment of much mirror-glass, with the view of ...epeating and re-repeating any object of beauty ...hat may be possessed, might be expected from ...a people who are ever craving after show, and ...nd their chief enjoyment in presenting a beautiful appearance and in dwelling amidst gaiety.

No right-minded person will censure the desire ...hich prompts the French to seek to render ...heir persons pleasing and their surroundings ...eautiful. The mind that can fully appreciate ...eauty is of necessity far from uncultivated; for ...ears of careful training are necessary in order ...hat objects in good taste may be fully valued, ...nd that their merits may be understood. But ...f beauty be sought while the intellect is uncultivated,—if gaiety be attained at the sacrifice of ...he enlargement of the great faculties of the ...ind,—then those who labour to behold beauty ...annot be held wholly blameless.

To what extent the cultivation of the mind is ...acrificed to the attainment of beauty in France ...t is impossible to say. In many cases, it is to ...e hoped that there is no sacrifice made to its possession; yet this is certain, that as regards ...he ornamental art of our Continental friends, ...he manifestation is rather that of external ...beauty than of internal worth: a smart showiness ...haracterizes their productions, and gaiety in ...some form is everywhere apparent.

It is to be noticed that the French are an impetuous and excitable people, which fact would, of itself, account for the character of much of their decorative art. They seek excitement: this being best produced in ornament by a lavish use of gold and by forms in high relief (the relief being necessary if gold is to be shown to the greatest advantage), they use gilded carving and plaster-work to a great extent; with this they combine flowers and ornamental scroll-work in imitation relief; and thus they produce that which, when viewed by the casual observer, is exciting and gay.

This form of art is common in Paris. The *cafés* have this kind of decoration with few exceptions, and even the Louvre is no exception to the general rule; indeed, it is probable that this is the great type from which the styles of the smaller buildings of France are mainly derived.

But it is not about the architecture of Paris that we would now write, but about the paperhangings; and here we perceive a great change, which has yet to be accounted for. The gay floral patterns that reigned supreme in this manufacture only ten years back are fast disappearing, and in their stead we find comparatively simple ornamental compositions. Several things combined have probably induced this change. To be surrounded by objects which are all gay may be pleasing for the time, but it ultimately becomes monotonous and wearisome, for repose is as necessary as excitement. This may have led to the change. Then experience will ultimately show, even if it fail to do so at first, that whatever is of a pictorial character is injured by repetition, while ideal ornaments are generally improved by multiplication. Some of the flower-groups which we have just seen upon a few of the Parisian papers are almost as perfect as works of art as it is possible for anything produced by machinery to be. They are exquisite in drawing, in grouping, and in colour; but while every individual group is thus a wonderfully perfect production, the general effect of a wall when covered with such a paper is unsatisfactory. A picture upon a wall is a pleasing object, but if the one picture were repeated fifty times on the side of the room few would look at any one copy, still fewer would stay to admire what they saw; and even the general effect of the side of the room would be offensive rather than pleasing. Floral wall-papers when hung present very much the appearance of a wall thus covered with duplicates of the one picture, and have a similar unsatisfactory character: hence we might naturally expect that, while they might have their day, like every other fashion, they would enjoy but a short existence, and would give place to a more worthy form of art.

Another reason why patterns of a floral character should pass away may be found in the progress of a knowledge of art. The international exhibitions, and other displays of decorated objects which we have had during the last few years, and the systems of art-education which are now actively at work in bringing about the cultivation of the public generally, cannot have failed in producing wholesome results. That they have achieved much that they were intended to do is obvious, for even the lowest classes of society have now some idea of art, especially upon the Continent; and the very possession of such knowledge must lead to the abandonment of that ornament which fails in imparting an agreeable effect to the room to which it is applied.

While we, at first, may be surprised at the change which we perceive in the French paperhangings, inquiry into the matter causes our wonder to cease. But, while there is thus a great change in this branch of the French manufactures,—and a change which is very desirable, as the general effect of an apartment should always be considered before the details of the ornament,—the change has not erased from French papers the stamp of their origin; for the ornament which has now superseded the flowers is yet gay rather than solid, and is more pretty than absolutely beautiful; and, until the French character is changed, this will continue to be the case.

The English character is more solid and less frothy than the French. The French put their goodness outside, the English keep it in; and, in some cases, we must admit, the greater portion remains inside when it might advantageously be manifested. This diference of character would lead us to expect a difference in the ornamental art of the two countries; and, in accordance with our expectations, we perceive a marked difference. Our first-class papers are this year, for the most part, high in their art-character, being generally good in design and carefully considered; yet they are not as pleasing at first sight as the majority of the French productions. In order to see the excellence of a first-class English paperhanging, we must look at it for some time; and, if it be good, it will take hold of the affections, and will grow in the esteem. But it is otherwise with the French papers. They look best when first seen, and the pleasing effect which they have when viewed for the first time soon departs; and thus they gradually become less esteemed rather than cherished more. Also, a first-class English paper looks better when hung than when in the piece, while many of the French papers look better in the piece than when hung. Yet these remarks apply neither to all French papers, nor to all English; and we cannot but notice how the French papers of this season approximate in style to our own. Solidity or real worth is better than showy appearance, though beauty, with internal merit, is most to be desired.

That we, as a nation, are now making rapid strides in decorative art is certain, and to this our French neighbours are compelled to bear testimony. We were struck with the remarks of a large Parisian paperhanging manufacturer, who said of some of our best patterns that they were too good for them; that they had in them a depth which the French could neither appreciate nor understand; and that they revealed a perfect understanding of ornament and a mastery over its laws such as the ornamentists of Paris did not possess. This is a strange admission for a Frenchman to make, but it is the sentiment of more than one of the leading manufacturers of Paris. If, then, we are passing the French in real excellence of ornamental design, let us see to it that we encourage that healthy growth of art which has set in, and foster its further development rather than check its progress; and let us also strive to combine the most beautiful external appearance with the fullest manifestation of true learning and internal worth.

ECONOMY OF AGRICULTURAL COTTAGES.

SOCIETY OF ARTS.*

With a view to discuss the object before us in the most practical manner, I propose to consider the subject of the economy of cottage-building under the following distinct heads:—

1st. The cost of cottages, as influenced by sanitary requirements and considerations of durability.

2nd. How far the improvement of the dwellings of agricultural labourers may be advanced by a modification of prevailing views, without detracting from healthiness and comfort; and,

3rd. The advantages gained by the labourer himself, his immediate employer, and the owner of the land upon which his labours are expended, by the erection of good dwellings placed in judiciously-selected situations.

It should be premised that the subject under consideration is confined to rural cottages—the dwellings of agricultural labourers and their families,—and does not extend to houses in towns, the dwellings of artisans, mechanics, shopmen, and workmen engaged in commerce and trade. To place the dwellings of these two classes of our industrial population on the same footing, would defeat the object we have before us.

The economy of the two can only be fairly discussed by keeping them separate; for, to look at them in the same light, we must assume that urban and rural labourers have the same income and earn the same wages, which is not the case. We should extend these prefatory remarks too far if we went into a comparison of wages, and the profits of agriculture and trade, upon which wages are necessarily based; but it may be safely stated that whereas the average wages of farm labourers in England and Wales do not reach 11s. a week, the wages of artisans, mechanics, shopmen, porters, and others employed in towns, amount to at least 24s. a week; arising from the fact that the average profits of trade are at least double those of farming, for which there are, of course, many reasons, the principal one being that the trader's capital is generally turned over more than once in the year, while the farmer's capital is with difficulty restored to him within the year.

The cost of cottages is made the first object of consideration, because it is practically found that although all persons interested in the question admit the present bad condition of things, very few, comparatively, are found willing to improve it, for the simple reason that the outlay does not command that direct profit which attends other investments.

Decoration and ornament often form serious items in the outlay, and, unfortunately, often detract from utility; but as these are objects foreign to our present purpose, they must be excluded from consideration. Good judgment in cottage-building is best displayed by neatness and simplicity. It is very possible to depreciate the value of landed property by building unsightly cottages, erected in defiance of good taste and in opposition to all rules of proportion.

The cost of agricultural cottages necessarily depends on the amount of accommodation they afford, and the strength and substantiality of the structure itself. The extent of accommodation which rural cottages should possess has recently been somewhat arbitrarily determined on sanitary grounds. The miserable hovels in which large families were crowded, and which still un-

* From a paper by Mr. J. B. Denton, read on the 11th inst.

fortunately exist, to the disgrace of our country, have called forth the indignation of all right-minded men; and we have been gradually led to conclude that no cottages are suitable unless they contain five living-rooms, of which three are bedrooms, of prescribed dimensions, with minor offices.

The principles upon which these dimensions of space have been determined are not very distinctly acknowledged, as will be seen by an examination of the views of different authorities and the regulations of different institutions. These show that the space considered necessary to maintain health in dwellings varies from 240 to 1,500 cubic feet for each person.

According to Dr. Arnott—perhaps the greatest authority on this subject as connected with ventilation—the actual quantity of air respired by an adult human being amounts to 300 cubic inches per minute—not quite one-sixth of a foot, or 240 cubic feet in the course of the day, while the total quantity of air, directly or indirectly vitiated during the same period, is 2,880 cubic feet. Tredgold, however, states the amount of air respired by an individual to be as much as 800 cubic inches per minute, or nearly half a cubic foot, while the total quantity vitiated during 24 hours he considers to be at least 4,320 cubic feet.

These figures are quoted to show the wide difference of opinion which has been expressed by high authorities on the vital point of respiration; and if we examine the views practically carried out at our various national institutions in the space given to each person, we shall find parallel instances of diversity. For example, the space admitted to be sufficient by the police authorities under the Lodging-house Act is 240 cubic feet per person: in the dormitories of the barracks of our army the quantity deemed sufficient has been 500 cubic feet, although the Commission on Warming and Ventilation to the General Board of Health urged that this space should be increased to 700 or 800 cubic feet per man. In hospitals, where extra reason exists for large space, the amount varies from 1,000 to 1,500 cubic feet each person: in the prisons 800 cubic feet seems to be the recognized space; and in the model lodging-houses about 550 cubic feet is given.

In spite of this prevailing diversity, experience enables us to adopt with security for cottages the following dimensions of space:—

Height of lower rooms, 8 feet; height between floor and ceiling of upper rooms, 7 feet 6 inches.

LOWER ROOMS.

Living-room	Area, 150 ft.—Cubic contents	1,200 ft.
Scullery	,, 80 ft.— ,, ,,	640 ft.

UPPER ROOMS.

Parents' bedroom...	Area, 120 ft.—Cubic contents...	900 ft.
Boys' ,,	,, 90 ft.— ,, ,,	675 ft.
Girls' ,,	,, 80 ft.— ,, ,,	600 ft.

The ventilation which will render these spaces sufficient is gained by having a fire-place and window in each room, with the door entering directly from the porch, passage, or stairs. Practically, all minute refinements in the art of ventilation are found inapplicable. In addition to these desiderata, each cottage should be provided with a pantry within the dwelling, having a command of a free passage of air through it. The scullery, and not the living-room, should have a copper and sink for washing, which should be the property of the owner of the cottage: an oven is a desirable addition, but it is not essential. The out-offices should consist of a small barn, for wood and coal; a privy detached, with facility for emptying it; and an ash-pit, so connected with the privy that the ashes may be used to prevent effluvium. The whole premises should be perfectly drained. All the roof-water should be preserved, and a command of well-water should be provided also. The yards and walks (if any) should be paved or gravelled, so as to preserve cleanliness within the dwelling.

These details of accommodation shortly supply the sanitary data upon which cottages of the best class should be built.

To avoid any difference of opinion as to the proper degree of substantiality to be adopted, it should be borne in mind that a very large proportion of the landed property of the county is held by tenants for life, and that it is of the highest importance that all buildings erected by them should have equal reference to future maintenance as to present cost, for no owner is justified—especially if he charge his estate with the cost—in putting up buildings of any character which shall be a cause of constant repair. This remark applies to all agricultural buildings, but most particularly to labourers' cottages; though instances are not wanting in which landowners, to gratify a passing impulse, have raised upon their estates a number of flimsy habitations, sometimes adorned with questionable taste, which their successors are maintaining at a greater annual outlay than the rent derived from them.

If a landowner, whose interest in his estate is limited to his own life, desires to borrow money for the building of cottages, in the same way as he is empowered by the legislature to borrow for the building of farm-houses, or as an incumbent of a living can borrow for the building of a rectory-house, he must conform to certain rules. In the case of farm-houses and labourers' cottages, these rules are furnished by the Inclosure Commissioners for England and Wales, who are appointed under the several Agricultural Improvement Acts, to protect reversionary interests against the misapplication of money, and to see that cottages, of which the cost is charged on estates, are built according to the rules laid down by them. Objections have been raised by landowners and by architects to the requirements of the Inclosure Commissioners, on the ground that the rejection of home-grown timber is too arbitrary, and that the dimensions of the scantlings are unnecessarily large; but no sufficient reason has yet been recognised for departing from them. It may be a question for owners in fee to consider whether these rules are such as it may be expedient for them to adopt, when not charging their estates; but it will be clear, on examination of the rules referred to, which are printed in the form of a circular, that in all cases of entailed property the conditions recognised by the Commissioners are sound, and ought to be adopted by all tenants for life, whether they borrow money and charge their estates or not. If this be admitted there is the least possible room for difference in the cost of cottages of the same class. Yet there is no subject, perhaps, which has elicited such variety of opinion, and such diversity of designs and estimates. If we examine the Journal of the Royal Agricultural Society of England, we shall see conclusive evidence of this fact. In one case, that of Mr. Young Macvicar (prize design 1849), the amount of his estimate is honestly given at 296*l.* 9s. 8d. the pair, while in another instance a subsequent prize was given in 1856 for precisely the same object, the estimate of which is 170*l.* the pair.

Were it possible to erect a pair of cottages, with the same accommodation, and with the same degree of substantiality, with such a saving as here quoted, there is no doubt the country would gain a great advantage; but by comparing the details in the two cases it will be found that if the same prices were paid for labour and materials in each, the latter design, which is represented to be the cheaper by more than 125*l.*, would, in fact, turn out to be the dearer of the two. This instance is given to show that the parent Agricultural Society of England, whose desire in offering these special prizes could only have been to forward the object now before us, has been led to award them without that close examination which alone can determine the value of competitive estimates, and the omission of this essential duty has been to retard rather than to advance the progress of cottage building.

The Yorkshire Agricultural Society," having offered prizes for the same object in 1858, received 76 designs for double cottages, to be built at a sum not exceeding 200*l.* the pair; and in 1861 the same Society again offered prizes, and received 149 plans for double cottages, not to exceed 220*l.* the pair, and 69 for double cottages, not to cost more than 180*l.* the pair. Upon these competitions two very careful reports were written by Mr. C. W. Strickland. In that of 1861 the prizes were awarded to Messrs. Richardson & Ross, of Darlington, for the cottages to be erected at 220*l.* the pair; and to Mr. J. B. Corby, of Stamford, for the plans of cottages costing 180*l.* the pair. They each exhibit very considerable merit, and have been adopted by landowners in various parts of the country. Mr. Holland, M.P., of Dumbleton, contracted with Mr. Hunt, of Evesham, for the erection of several pairs upon the plan (No. 1) of Messrs. Richardson & Ross, whose published estimate was 210*l.* 14s. 1d. the pair. They are very well executed, but in some few particulars, such as the use of spruce for the floors of the bedrooms, and elm for staircases, are at variance with the requirements of the Inclosure Commissioners. Mr. Hunt's description of the construction, and his statement of facts are as follows:—

"CONSTRUCTION.

The cottages are built with red bricks, made upon the estate, those for the plinth and jambs of windows and doors of back elevation being moulded for the purpose.

The dressings to the windows are of Bath stone. The floors to the living-rooms and entrance passages are of blue stone, tooled, with steps at entrance and back doors of same material.

The floors of sculleries and pantries are of red squares, also made upon the estate. The floors of outhouses are brick on edge.

The roofs are covered throughout with Broseley tiles, the gutters and ridges being of same material; the gable ends are filleted with cement.

The eaves are spouted throughout with cast-iron spouting, with down pipes of same material, and the water equally divided and conveyed into a tank sunk below the surface to supply each cottage with water.

The timbers throughout are red deal, that to the roofs in sight being wrought and stop chamfered.

The floors of bedrooms are of spruce deal.

The staircases are constructed with elm.

The window frames and casement sashes are made of red deal, one compartment in each window being hung. The door frames and doors throughout are also made with red deal. Skirtings of wood to the bedrooms, and cement ditto to living-rooms and passages. Pantries fitted up with shelves.

Plastering to the whole of the rooms except walls of sculleries and outbuildings, those being grouted with lime only.

The windows are glazed with thirds sheet-glass, and the whole of the woodwork usually painted receives three coats.

Each pair of cottages are properly drained, gardens levelled, and paths formed and gravelled, pitched causeways at back leading to outhouses and approach gates.

The contract amount for the erection of each pair, including every description of labour, materials, and all hauling, was 250*l.* a pair.

It should be understood that bricks were near at hand, and charged at 25s. per 1,000; rubble was also obtained from the brickyard, for concrete to foundations and filling to garden paths, at 1s. per cart-load. Sand also was had for raising off the estate, also gravel for footpaths, and that the contractor lost 20*l.* upon each pair built. I do not think it possible to build cottages of this description, to cover everything, for a less sum than 270*l.* per pair.

GEORGE HUNT.

Evesham, 6th January, 1864."

Mr. Joseph Yorke, of Forthampton, Gloucestershire, has erected some cottages on Mr. Corby's plan, the estimated cost of which was 178*l.* 11s. 5d. the pair, and he has taken every care, by the employment of his own workmen, to reduce the cost to a minimum. The actual cost, exclusive of extras for ornamental chimneys and window labels, and exclusive of the out-buildings and tank, has been 209*l.* 1s. 3d. The work has been since measured and valued by a local builder, and his figures amount to 222*l.* 4s. 2d. for the same thing, showing that by the employment of the estate workmen a saving of 13*l.* 2s. 11d. was effected.

These results prove that, although a careful examination of the designs was made by the Yorkshire Society, the estimates of the prize designs would not stand the test of practical experience, and that 25 per cent. on the estimates must be added to arrive at the actual cost. These remarks are not meant to reflect upon the professional men who have furnished designs, and who have doubtless expressed truthfully their own convictions; but they are intended simply to disclose facts which have acted prejudicially to the advancement of cottage building. It may be stated in general terms, that where the accommodation afforded is precisely the same, and the same degree of durability is aimed at throughout, there cannot be a greater difference in any designs beyond 10*l.*, or at most 15*l.* per pair of cottages, always assuming that the circumstances are the same with respect to the employment of tradesmen by contract, who may fairly claim tradesmen's profit, or the employment of estate journeymen, whereby the tradesmen's profit is saved.

The number of cottages built in pairs, with three bed-rooms each, within the last ten years, upon the principles respecting accommodation and construction here explained, the particulars of which I have taken pains to ascertain, afford a close approximation to a general average of cost.

Including outbuildings, and the formation of a tank for roof-water, that cost is found to be 270*l.* the pair. This price represents the cost at which a builder will undertake the work, and it is possible, by employing the estate journeyman, to reduce it to 255*l.* This amount will necessarily vary with local circumstances and the cost of materials, and will be increased further by the expenses attending the borrowing of money and the inspection of the Inclosure Commissioners, in those instances where tenants for life resort to this mode of effecting their wishes. The price is independent of the land upon which the cottages are built, which, nevertheless, forms an important item of cost. In the consideration hitherto given to the subject, and in the estimates generally furnished with the prize designs, no notice has been taken of this point,

although it is one which must be considered, if we are to regard cottage-building as a proceeding worthy the attention of capitalists as well as land-owners.

Thus, it is not at all improbable that the total cost may frequently reach 300*l.* the pair. Where a landowner adopts the plan of borrowing money, and undertakes to repay it by instalments in thirty years, with interest, he must look to a return, in one shape or another, of at least 6 per cent. per annum. In fact, under any circumstances, the return, in one shape or another, for cottage-building, should be this per-centage, to render the outlay a discreet one; for cottages are perishable, and the first cost must be regained in a given number of years, to enable the owner to replace them.

On a pair of cottages costing 300*l.*, therefore, the return to be looked for is 18*l.* a year, or 9*l.* each cottage. This is equal to 3s. 6d. a week.

DWELLINGS IMPROVEMENT IN THE METROPOLIS.

A REPORT has been addressed to the Council of the Society of Arts by the special Committee on the Statistics of Dwellings Improvement in the Metropolis, and has been printed by Simpkins, 70½, Strand. Mr. Twining had offered to collect, at his own expense, in the name of the Society of Arts, information as to the results obtained, in a financial as well as a sanitary point of view, by the societies and individuals engaged of late years in providing improved dwellings for the working classes in town and country, or in organizing establishments for their benefit, as he considered that future operations in this direction might thus be much facilitated. The inquiry has produced a very satisfactory amount of information. This has been put into shape by Mr. W. G. C. Rigby, the builder, as reporter to the Committee, with the aid of Mr. Twining. The pamphlet under notice is the result. It contains a useful and important tabular classification of particulars as to no less than thirty-two different metropolitan establishments more or less connected with the dwelling reform movement, with profits ranging from none at all up to 14 7/8 per cent. on investment, as in the case of the model lodging-house in Charles-street, Drury-lane.

In a financial point of view, renovated dwellings have been found to have a decided advantage over new ones; but in sanitary respects the new have the advantage. Still, Mr. Rigby is convinced that even in this higher field of enterprise satisfactory results may be obtained by a combination of the various elements of success, carefully borrowed from the best examples. On the whole, he finds Clark's-buildings, in Broad-street, St. Giles's, to be the most usefully suggestive. In this case, too, the return on outlay is as much as 10 per cent.

THE MONUMENTAL ARCHITECTURE AND SCULPTURE OF THIS COUNTRY DURING THE MIDDLE AGES.*

IN the interment of our dead we are fast reverting to the ancient Roman law. Most of our cities and large towns have now cemeteries established in or beyond their outskirts, and many of our old graveyards are closed, and no longer suffered to be used for burial. Nor—with a few exceptional cases—are the pavements of our churches now allowed to be disturbed for further inhumation.

As to the new cemeteries they are not like the ancient, over-filled graveyards adjoining the churches in our populous towns, uncared for, and with a look of desolation, as if the memory of the dead were forgotten. They are laid out with taste, they are kept in order, and scope is afforded for sepulchral monuments in many a varied design.

In our memorials of the dead we go back to pre-historic ages, and from thence we can deduce, in regular succession, monuments of every period during the last seventeen centuries. Our churches abound with these remembrances: in them we find the most interesting records of the skill and taste evinced by our forefathers in architecture and sculpture. The peculiarities of costume, whether religious, military, or civil, of every fashion during the last 600 years, are there portrayed. These monuments are of historic worth: they carry us back to customs and observances: we find a difficulty in realizing or understanding without them; in a word, they afford some of the best illustrations to our national history.

In the pre-historic period, or that anterior to the occupation of this country by the Romans, we find two classes of sepulchral monuments, both unlettered. The most ancient of these was the monolith, or single pillar of unhewn stone, the "*Maen hir.*" Of this class of monument we find the earliest record in Holy Writ relating to the stele or stone placed on the grave of Rachael: "And Jacob set a pillar upon her grave, that is the pillar of Rachael's grave unto this day." These monoliths or pillar stones, "*meinian hirion*," high stones, are found in Cornwall, Wales, and the Isle of Anglesea, where they are numerous: in other parts of this country they are comparatively of rare occurrence. There is a huge monolith of this class, called the King stone, at Long Compton, in Warwickshire, about fifty yards west of the circle called the Rollright stones.

A monolith of this description has, I believe, within the last few years, been placed in the Norwood cemetery, as a memorial to the late Mr. John Britton, who was buried there; and a more fitting sepulchral monument to that eminent antiquary could hardly have been chosen.

The second and only other class of ancient British sepulchral monuments is the *Cromlech*, consisting of a huge unhewn stone, sometimes 18 or 20 feet in length, and of proportional width and thickness, placed flatwise or nearly so, on three, four, or more larger stones set beneath it as supporters, thus forming a huge but rude kind of table monument. This class of monument, like the former, is to be found more frequently in Cornwall, Wales, and Anglesea, than in other parts of this country. Kit's Cotty House, in Kent, and the stones called the five knights, near the Rollright stones in Oxfordshire, are sepulchral monuments of this description, on which I need not further dwell.

When the Romans had conquered and were in the occupation of South Britain, they retained the usages of their own country in the burial of their dead. Their interments, whether the body was burnt or deposited entire, took place in cemeteries outside and at some distance from their cities and towns, and generally by the side of or near to their great roads. This practice was in accordance with the Laws of the Twelve Tables, which forbade the burial of the dead amongst the habitations of the living.

The Romans, during their possession of this country, had two classes of sepulchral monuments—the upright stone, answering to our common churchyard tombstone; and the sarcophagus, answering to the high tomb or table monument, common both to our churches and churchyards. The upright stone was finished at top like a triangular pediment; and this part was often sculptured in relief, and sometimes even beneath the pediment; but on the side of the upper portion of the stone sculptured figures in relief are found. The stone was regularly cut or hewn, and beneath the part more or less covered with sculpture was the inscription in plain letters, well and carefully cut, and easy to be read. This generally commenced with the letters D. M., or *Dis Manibus*, the usual prefix to Roman sepulchral inscriptions, and contained the name of the person of whom the stone was commemorative, and the number of years and months he lived. Sometimes it concluded with the letters H. S. E., *Hic sepultus est*; but there is nothing, as there is on the consular diptychs, to denote the year in which the party died.

Monumental stones of this class have been found in or near London. I think there is one, if not more, in the British Museum; at Wroxeter, near Shrewsbury, now preserved in the Library of the Grammar School at Shrewsbury; near to Cirencester, now preserved in the Museum at that place; and elsewhere.

The other class of Roman sepulchral monuments we find in this country consist of sarcophagi or stone chests, of a regular oblong form, generally hewn out of a single stone, but sometimes formed of more, which contained the interment, whether by cremation or deposition of the body entire. This chest was covered with a massive coped lid. The sarcophagus thus constructed was ofttimes more or less ornamented on the sides and cover, though it was sometimes quite plain. On one of the sides we occasionally meet with an inscription, but there is often no inscription to denote the name of the person thus buried. Some of these sarcophagi discovered in or near London are deposited in the British Museum. One, perfectly plain and with a plain coped lid, was discovered a few years ago by Mr. Bros, in his grounds at Springfield, Upper Clapton, and is still preserved there. In the Museum at York are several, found outside of that city; and some were discovered years ago at Keston, in Kent, near to St. Alban's, Hertfordshire; and elsewhere.

These sarcophagi were evidently placed above ground, and not buried in the earth. A study of these monumental relics, even at the present day, might not be unproductive of good, as their forms might be adapted for a certain class of tombs in our modern cemeteries.

These two classes of Roman monuments may in date be attributed to a period ranging from the beginning of the second century to the fifth century after Christ.

We have a curious class of inscribed sepulchral monuments of the later Britons, after the departure of the Romans, extending in date over the sixth, seventh, eighth, and ninth centuries. These consist of rude monoliths, some of large, some of small size, bearing inscriptions which, for the most part, simply denote the names of the persons of whom the stones were commemorative, and of whom they were the sons, with sometimes the words, "*Hic iacet*," or "*Hic in tumulo iacet.*" These inscriptions are, with few exceptions, very brief, and the letters are badly shaped and irregularly cut. They are in Latin, and the grammar and spelling are often faulty. They are not cut or read horizontally across the stone, but vertically downwards. These lapidary inscriptions are mostly found in Wales, Cornwall, and the Isle of Anglesea. Many have been removed from their original positions, and preserved or built up into the walls of churches. There are, perhaps, about one hundred of this class of sepulchral monuments.

One of these lapidary inscriptions is, I think, in the British Museum, and there are two or three in the Meyrick collection at Goodrich Court, Herefordshire. The well-known pillar of Eliseg, near Llangollen, North Wales, contains, perhaps, the longest inscription, which is in the nature of a pedigree, to be found on these stones, and this is cut horizontally and not vertically. There is also a rude monolith of this class with a somewhat lengthy inscription, also cut horizontally, on the Duke of Buccleuch's property, near Yarrow, Selkirkshire, Scotland. As these lapidary inscriptions contain nothing approximating a date, the probable age of each is only to be presumed from the palæographic features or forms of the letters. These inscriptions are often partially obliterated or most difficult to be read.

Of the sepulchral monuments of the Anglo-Saxons, after their conversion to Christianity, we have very few existing remains, so few as hardly to be classed otherwise than singly. They comprise obeliskal crosses, as well as flat or coped-shaped monuments. Some of these are plain, some covered with involuted knot-work. Two ancient sepulchral crosses, which I should assign to the Anglo-Saxon era, are to be found in Penrith church-yard, Cumberland, and two in Whalley church-yard, Lancashire. These do not appear to have been disturbed from their original positions, from which in general we find Anglo-Saxon monuments to have been removed.

In pulling down the old church of St. Alkmund, Derby, some years ago, preparatory to erecting the present church, fragments of Anglo-Saxon monuments were discovered in the walls and foundations; some of these were ornamented with involuted knot-work in relief; one thus ornamented was coped.

I think it very probable that this may have been the shrine or sepulchral monument of St. Alkmund. One monument here discovered, a flat stone about a foot thick, had one of the sides covered with an arcade of plain semicircular arches, springing from plain block imposts on square piers. This is the earliest monument with architectural details I have found.

In the early historians we meet with some few notices respecting Anglo-Saxon sepulchral memorials.

St. Cuthbert, who died at Farn, A.D. 688, when dying, requested he might be buried near to his oratory, on the south side eastward, and close to a cross he had there erected. When his remains were removed in the eighth century to the cathedral of Lindisfarn, Ethelwold, ninth bishop of

a

* By Mr. M. H. Bloxam, read at the Architectural Museum, on Tuesday, May 10.

that see, caused a cross of stone to be sculptured and set up in his memory. This cross was broken A.D. 793, when the Danes devastated the church of Lindisfarn. It is, indeed, to the destruction of the principal churches and monasteries throughout the kingdom by the Danes, in the ninth and tenth centuries, when the monuments of the dead shared the fate of the churches, that the paucity of such remains of the Anglo-Saxon era may be accounted for.

The body of Acca, Bishop of Lindisfarn, who died A.D. 740, was buried at Hexham, and two stone crosses covered with sculpture were set up over his grave, one at his head, the other at his feet. An ancient monumental stone rudely sculptured with crosses and other detail was, A.D. 1831, discovered in digging for a grave in Hexham churchyard: this is preserved in the church of Hexham, together with the fragment of another sepulchral cross covered with knot-work. One of these may possibly have been one of those set up over the grave of Bishop Acca.

Sepulchral monuments of the Anglo-Saxon era have been found at Dewsbury, Yorkshire, Repton, Derbyshire, Heysham, Lancashire, and elsewhere. One is built up in the wall of the tower of St. Mary, Junior Bishophill, York. In taking down old churches we often find remains of sepulchral monuments, some of which are of very early date, built up in the walls or buried in the foundations.

There is one sculptured stone, of which there is, I think, a cast in this museum, preserved in the cathedral at Peterborough. This, on the strength of a passage in the chronicle of the pseudo Ingulphus,—a chronicle, I believe, generally now admitted to be a forged document—was long considered to be a memorial raised over the body of the Abbot of Medehamstead,—as Peterborough was anciently called,—slain with the monks of that monastery by the Danes A.D. 870, and said to have been erected soon after that event; but a careful examination of this sculptured stone shows the date of it to have been at least two centuries later, and of Norman design and workmanship. I do not think it was a sepulchral monument, but a shrine or part of a shrine.

In the churchyards, and built up into the walls of churches in the Isle of Man, are numerous sepulchral headstone crosses, several of which bear inscriptions in Runic characters in an unusually perfect state; the material of which these monuments are mostly composed being a hard clay schist or slate. These crosses are generally embellished with interlaced braids and knot-work, and rude figures of men and animals sculptured in low relief. They appear to be of Scandinavian origin and design, the work of the Danes or Norsemen, who conquered that island about the close of the ninth century, and were succeeded by the Scots about the middle of the thirteenth century; and to a period comprising the tenth, eleventh, and twelfth centuries, these monuments may be ascribed. The inscriptions, so far as they have been deciphered, understood, and translated, bear the same import, namely, that one person, whose name is given, erected to another person, whose name is also given, the particular cross on which the inscription is cut. We have in England few sepulchral lapidary inscriptions in Runic letters.

A flat sepulchral slab bearing a cross, in form that of a globular pattee, and short inscription in runes, was some years ago discovered at Dover; and a sepulchral headstone cross, with considerable ornamentation and a Runic inscription, has also been discovered at Lancaster.

The forms of some of these early headstone crosses, but without the ornamentation, might be well adapted to the sepulchral memorials for our cemeteries; and, as such, are at least deserving of study.

Of the sepulchral monuments still preserved in the churches of this country, and which may be ascribed to a period comprising the latter part of the eleventh and the whole of the twelfth century, or from the Norman invasion to the close of the reign of Richard I., the number is comparatively small, notwithstanding the vast increase of monastic churches, more of which were then founded than in any other period of like duration. This may be attributed to the probable destruction of monuments of early date in the ruin which followed on the suppression of the monastic and conventual establishments in the sixteenth century, most of the churches belonging to which were then partially or wholly destroyed; and on the sites of these churches or amidst their ruins, ancient monuments or fragments of such, some of which may be referred to this, the Norman era, have been occasionally discovered. It was also by no means an unusual practice in subsequent ages, when ancient churches were rebuilt, to disregard or destroy the sepulchral memorials of earlier times, and conceal the fragments, or build them up into the walls of the new structure, since on the pulling down of late Mediæval churches for the purpose of partial or entire re-construction, early sepulchral memorials of this era, as well as of later times, have been disclosed.

The architectural monuments of Norman design are few in number. One was found some years ago in Fordwich Church, Kent, on one side of which was an arcade of semicircular intersecting arches,—and the fragment of a high tomb was discovered A.D. 1815, on the site of Abbey Church, Reading. This exhibited the bases and the lower portions of the shafts of a row of semi-attached columns, probably supporting arches, which had evidently surrounded the whole of this tomb. It was supposed to have been the tomb of Henry I., who was buried in this church, and whose effigy was thereon placed. Perhaps more monuments decorated with sculpture exist of this period than those architecturally adorned. A well-known monument, consisting of a slab of black marble covered with sculptured detail, consisting of a kind of stiff foliage, is preserved at Lewes. A long inscription, in Leonine or rhyming Latin verse, incised upon it, shows it to have once covered the remains of Gundrada, wife of William de Warren, first Earl of Surrey. She died A.D. 1085, and was buried in the chapter-house of the Priory of Lewes, but this monument is of a period of at least half a century subsequent to her death. From a careful examination of the details some years ago, I came to the conclusion that it had been sculptured in the latter part of the twelfth century. Now, in excavating on the site of the chapter-house at Lewes Priory, some few years ago, on the formation of a railway, a leaden cist of small size was discovered, with an inscription denoting it to contain the bones of the Countess Gundrada, so that when, years after her death, her remains were disturbed and thus deposited, this monumental slab was, I think, sculptured and placed over them. In form it was of a fashion which now generally prevailed to the close of the fourteenth century, wider at one end than the other.

In the church of Coningsborough, Yorkshire, is a coffin-shaped slab or monument of grit, slightly ridged and tapering from head to foot, being only 15 inches in height. It must originally have been placed close to a north wall, as the top and south side only are decorated with a profusion of rude sculpture. Thus is represented in low relief, the temptation of Adam and Eve, and a combat between two mounted knights, and a variety of other sculpture. In Wirksworth Church, Derbyshire, is a curious monumental stone covered with figures of rude Norman sculpture.

In Ely Cathedral is preserved a very curious sculptured monument of Norman design. It consists of a slab of black marble, of a coffin-shaped form, wider at the head than at the lower extremity, from which latter a portion has been broken off. This monument is said to have been removed from St. Mary's Church. On the upper part of this slab is sculptured, in low relief, a canopy with representations above of Norman buildings. Beneath this canopy is portrayed a figure of St. Michael bearing a soul to heaven, the soul being represented as a small nude figure with the hands and arms upraised, but not joined, the lower limbs being enveloped in a winding-sheet. This is an early instance of the conventional mode, afterwards common, of representing the conveyance of a soul to paradise by angels holding a winding-sheet, containing the nude figure of a child. This practice is thus alluded to by an old writer, Becon, of the sixteenth century, in a work entitled, "The Acts of Christ and of Anti-Christ:" "Anti-Christ is buried in a glorious tomb, well gilt, and very gorgeously set out with many torches and great solemnity, and with angels gloriously portured that bear his soul to heaven." At the back of the small nude figure is seen an episcopal pastoral staff, with the crook simply curved and turned outwards, thus indicating this to have been the monument of one of the Bishops of Ely, of the twelfth century. There are some plain slabs of this period with inscriptions in Leonine Latin verse, and otherwise, the dates of which are ascertained, but these are ornamented neither with sculptured nor architectural detail. Although there is a vast quantity of sculptured work of the twelfth century, such appears chiefly on the tympana of doorways and the capitals of columns; and the surface of such sculptured work is often abraded. We may observe a diversity of skill employed in the work, which for the most part is of a comparatively rude character, with the drapery disposed in a stiff and mechanical manner: we may, however, here and there discern the work of a superior artist, and the germs of a better school of art. About the close of this century we may notice the introduction of life-sized recumbent effigies, executed in very low relief. These as yet are not many in number; perhaps, one of the effigies in the Temple Church, London, is of this period. That in Salisbury Cathedral, ascribed to Bishop Roger, who died A.D. 1139, has an inscription in Leonine verse of six lines, which, however, give no name, and this monument, though of the twelfth century, is, I think, of somewhat later date than the time of Bishop Roger. There is also the recumbent effigy in Peterborough cathedral, of one of the abbots of that monastery, which I should ascribe to the close of the twelfth century; but the number of sepulchral recumbent effigies of this age are few, even if we include those at Fontevraud, in France, of Henry II., who died A.D. 1189, of Eleanor de Guienne, his Queen, who died A.D. 1204, and of Richard I., who died A.D. 1199.

In these recumbent effigies, notwithstanding the stiffness, formality, and multiplicity of folds in the arrangement of the drapery, we perceive the germs of a better school of art, which developed itself in the thirteenth century. These effigies are, therefore, worthy of notice, and casts of them may, I believe, be studied in the Crystal Palace at Sydenham.*

THE BUILDING TRADES MOVEMENT.

Birmingham.—A meeting of the Committee of the Birmingham Master Builders' Association was held on Wednesday in last week at the Woodman Inn. Delegates from the Carpenters', Masons', Bricklayers', Plasterers', and Labourers' Societies attended by invitation. Reporters were not admitted, but we believe the masters began by agreeing to the demand of the men to make four o'clock the hour of leaving off work throughout the trade. The carpenters were offered 26s. 6d. a week, their demand being 27s. The deputation consulted with their fellow workmen, and on their return refused the offer, urging that the masters might as well give the extra 6d. The masons desired to commence work on Monday at seven. The masters offered 6d. extra for the first hour of that day—from six to seven—with the option of beginning at either hour. The deputation, after consulting their society, declined the terms offered. The bricklayers, we understand, were offered 28s. per week during the eight summer months (they asked for 30s.) and their present rate of wages—27s. a week—during the four winter months. The deputation, having full power to treat, at once declined the offer. The plasterers were offered 26s. 6d. a week, and this was also refused. The labourers were offered 18s. a week, which offer they accepted. As regards overtime, the following offer, we understand, was made by the masters:—Over-time from half-past five till eight at the usual rate of wages; after that hour time and a half; and on Sundays double time. These terms were refused. The only deputation present, therefore, who accepted the terms offered by the masters was that sent by the Labourers' Society.

Walsall. The joiners and bricklayers in this town, struck on Monday in last week for a reduction of the hours of labour, the employers having refused to accede to the terms of a notice served upon them by the men on the 15th ult. to the effect that from the 2nd of May they should cease work on the evenings of the first five working days of the week at half-past five instead of six o'clock, and on Saturday evenings at four o'clock instead of five as hitherto,—the time of commencing work to remain the same as before, viz., seven o'clock on Monday mornings and six o'clock on the other days of the week. Mr. Highway offered to adopt the rules in force at Wolverhampton, the effect of which would be that the men would receive 4s. a week more, the hours of labour remaining somewhat less than before. This offer was accepted by the carpenters in Mr. Highway's employ, but declined by the bricklayers in consequence of its being contrary to the rules of their executive.

* To be continued.

ne other masters offered to accede to the demands of the workmen at the expiration of ten eeks. The operatives refused to accept this fer, believing that it was made with the view f getting rid of them when the affairs of the uilders would allow of its being done conveiently. A conference took place between the asters and men on Thursday evening, at which e whole subject was discussed, and the result as that the demands of the operatives were acded to, work being resumed on Monday. It was lso agreed that three months' notice should be iven in future of the intention of either masters r men to demand an alteration in the hours of abour or the rate of wages.

Liverpool.—The carpenters and joiners have een agitating recently for an increase in their ages to the amount of 2s. per week. Most of he employers have acceded to their request; but s a few have refused, the members of the oiners' Society held a meeting on the subject. he report of the executive committee contained list of 73 builders who had consented to raise he wages as requested. The secretary added to he report a statement that other employers had iven their word that they also would increase he wages of their joiners to the amount required, aying the increase back to the 1st of May. esolutions to the effect that every legitimate eans would be used to compel the remaining asters to comply; and that if not, by Saturday ext, those in their employ should strike, and e supported by subscriptions of their fellow orkmen, were carried unanimously. The meetng then proceeded to alter that part of the rules referring to the rate of wages, making the standing wages—instead of as hitherto, 4s. 8d. a day—5s. for the first five days of the week, and 3s. for Saturday.

Ormskirk.—The master painters, &c., of Ormskirk, having refused to comply with certain conditions, said to have been unanimously agreed upon by the journeymen, the men consequently struck work on Monday in last week. About a week before, the masters each received a notice, the following of which is a brief summary:—"That all men receive an advance of 2s. per week; that all men be at the pay-table by four o'clock on Saturday; that upon no consideration shall any man be required to find brushes of any kind; and that men at work in the country be allowed twenty minutes per mile for walking, and where the distance is too far the railway fare to be paid." The masters refuse to comply on the ground of not having had sufficient notice, in that it would materially interfere with the contracts they have at present in hand.

Great Grimsby.—The strike here, we are informed, was partial, and only against the subcontractor for the new hotel Royal Dock. He proposed to give skilled workmen the wages demanded, and the unskilled a less wage, which was declined. A staff of skilled bricklayers, and a sufficient number of good labourers, have now been obtained.

Wick.—The masons of Wick are now nearly all out on strike. Their wages have ranged from 10s. to 16s. a week for the last few years. They have struck for 1*l.* per week now, and the employers to be at the expense of sharpening the men's clurers, which is considered about equal to another 1s. a week.

THE ROYAL ACADEMY EXHIBITION.*

THE Great Exhibition of 1862 has left no remembrance likely to last longer than the impression made by its associated picture collection; and not many of the contributors are likely to be so well recollected after Baron Leys and M. Gallait, as M. Tidemand, who renews acquaintance this year on the walls of the Royal Academy, by sending one of his vigorous illustrations of Norwegian life and customs (542) "An old Norwegian Duel," represented with rather too strict an adherence to fact to be altogether pleasant.

A concourse of peasants, apparently assembled for merry-making, have their attention concentrated upon its very opposite result, though evidently not a surprising one to them, since every necessary preparation seems to have been forthcoming for any incident of the kind. Two youths, excited by love, loyalty, or liquor, have quarrelled and fought, and the deadly nature of the combat is only too forcibly realized: they are both mortally wounded, and the different degrees of grief and consternation of the various spectators consequent upon its termination admirably indicate their relationship to the combatants and interests in the fight. It will always be most desirable to secure such opportunity of contrasting the respective merits of foreign schools with our own, as may be offered by M. Tidemand and painters of continental celebrity becoming contributors to our exhibitions. If it were only for the sake of variety and novelty, such assistance would be valuable; although, with regard to variety, there is little to be said on the present occasion; for, what with M. Tidemand's killing picture, Mr. Phillips's waking, Mr. Calderon's burying, M. Legros's bewailing, and a host of allusions to the grim enemy, headed by Sir Edwin Landseer. R.A., and going no further down the list than to clever Miss E. Osborn, there may be even a greater want of it than is usually the case.

However disagreeable the subject of M. Tidemand's work, it is eminently characteristic of those primitive ideas of chivalry that obtained, and still obtain, in some parts of the world the least remarkable for police regulations, and where there are no courts of redress beyond what any clear space and no favour may be accounted. Indeed, "An old Norwegian Duel" may suggest to those who prefer chopping legs to logic a very perfect mode of settling a little difference; whilst to others with less conservative notions and more inclination for leaving it to the officers of the Peel institution to decide such disputes for them than to peel and do it themselves, it must be a satisfaction to reflect that this method of giving and taking satisfaction now, is left less to particular tastes and opinions than it formerly was in those good old times tradition would have us deplore.

And yet to the most appreciative of the law's majesty at home and abroad, there may be instances of very modern occurrence that would seem to furnish excuse for reverting to barbarous defence against barbarous prosecution. As when a judge, if exceeding his jurisdiction in giving the accused clear intimation that he means to kill him if he can, in spite of jury, witnesses, and all, reduces a criminal trial to a very unequal personal encounter, and the chances for prisoner, guilty or not, to a minimum.

Mr. Rankley, always conscientious and painstaking, has made a great stride towards the attainment of those qualities in which he may hitherto have been supposed to be deficient. (347) "The Doctor's coming," for its clever enunciation of story, and for its abstract claims to excellent workmanship, will take precedence of anything he has previously done; and although he certainly has employed the strongest means of producing a strong effect—bright firelight opposed to the more mysterious influence of the moon,—he has most judiciously used them. Gipsies, whether English or Spanish, are only equally amenable with the rest of humankind to the "thousand natural ills that flesh is heir to;" but what a help their romantic habits and picturesque circumstances afford to the artist, even when relating the simplest episodes of ordinary existence to enforce its consequence, such as in this, where a father and mother are watching their sick child, in apprehension of the coming too late of the doctor, whom they have summoned to its assistance by the little barefooted messenger, now breathless, after her long run across the misty common, to announce the welcome arrival. Taking advantage of the demonstrativeness of such actors, Mr. Rankley has been enabled to intensify expression to a most telling point, and, without exceeding probability, has reached the extent of it.

There are too few of our younger painters who venture upon subjects requiring research, and the difficulty of sustaining a story throughout a complication of incidents; great praise is due, therefore, to Mr. E. Crowe, whose (360) "Luther posting his Theses on the Church-door of Wittenberg" falls very little short of being a fine picture. The composition is rather too equally divided, and the clear stage left to Luther by the rest of the *dramatis personæ* gives to him the appearance of being an exacting theatrical star; but the easily-recognised portraits, well-studied costume, and capital manipulative qualities, bear witness to an energy of purpose and industry of the most desirable sort, that entitle the possessor of them to every encouragement. Similar commendation must be awarded to Mr. W. F. Yeames, for his careful rendering of one of the many adventures that befell Henrietta Maria, "La Reine Malheureuse" (477), who, on her return to England from Holland, where she had been to obtain supplies for her husband, King Charles I., to carry on the war with the Parliament, is pursued by Admiral Batten, sent to intercept her; and, two days after her landing in Burlington Bay, five ships entered the bay, and commenced an active cannonade.

"'One of their ships,' says the Queen in a letter to the King, 'did me the favour of flanking on the house where I slept, and before I was out of bed the balls whistled so loud about me, that my company pressed me earnestly to go out of the house. * * * So, clothed as well as in haste I could be, I went on foot to some little distance from the town of Burlington, and got in the shelter of a ditch, whither before I could get, the cannon bullets fell thick about us, and a servant was killed within seventy paces of me.'"

Mr. Yeames shows this place of refuge, with the queen surrounded by her companions; the cavaliers impatient at their somewhat ignominious position; frightened waiting-women, and a cowardly priest, who would appear to think no situation humiliating if it were only a safe one; have all appropriate character; but there is not enough of the serious import of the narrative conveyed into the picture to create a proper amount of commiseration for them. Pathos is neglected for humour, and this is the great failing of it.

Mr. Pettie also is evidently most at home where he has humour to deal with. (169) "The Tonsure" is very comical and apt in expression, besides being cleverly painted; but his execution is too slight for any such weighty matter as (471) "George Fox refusing to take the Oath at Houlker Hall, A.D. 1663." Mr. G. A. Storey's treatment of (465), "The Meeting of William Seymour and the Lady Arabella Stuart at the Court of James I., 1609," lends no additional interest to rather a bald subject, the success of which must mainly depend upon appositely imagined introductions to raise it above portraiture. Neither has Mr. Hayllar been more fortunate with a much better one, (450) "The Queen's Highway in the Sixteenth Century," which might be thought to offer vast opportunities to a more perceptive reading of it. And Mr. J. E. Hodgson's (512) "Queen Elizabeth at Purfleet" does not equal in conception or design the "Beacon" picture of last year, although it maintains promise of far better performances presently.

At the head of those who represent rustic and domestic incident Mr. T. Faed, A., has such resources at command that he may almost defy competition: putting aside his astonishing dexterity of touch and exquisite feeling for colour, his power of conveying expression is quite as remarkable; and, being a rarer endowment, it would suffice to make him eminent with less than half his other gifts. It is his habit to appeal to the widest range of sympathy, and all that he does is to be as easily understood by the peasant as the peer. (315) "Baith Faither and Mither" is exquisitely pathetic; and the poor old cobbler, a widower, so anxious to save his treasured little daughter knowledge of their common loss by supplying her place as far as possible, is a lesson to be universally applied. She is better cared for than her schoolmates, evidently, who are watching the bungling tenderness with which he is putting on her gloves to complete the operation of dressing her for school, with that mixed expression of respect and envy a nicer frock and bonnet than their own would be safe to excite; and no wonder, besides, with her father so obviously convinced of her being the most precious little woman in the whole world!

Mr. H. S. Marks may be of those who really do sigh after the good very old times, since he ignores things as he finds them, and insists that even with respect to bakers and blind pipers they must have fed and fasted, lived and died at least 300 years ago to be worth thinking about at all; and with so much quaint, dry persuasion in his argument, that one is half carried away by it to think with him. Of the three pictures he exhibits this year, only one, however, partakes of the comic. (326) "Doctors differ," as he shows in stature and implies in statute; the acumen with which the two professors are expounding their theories whilst practice is so much more needed is very perfectly indicated, and is a sharp satire. In quite another vein Mr. Marks has produced his best work (584) wherein an aged grandmother, the guardian of an orphan child, is reverently absorbed as she sits surrounded by the monumental tombs in a church listening to the service, with the little protected one asleep by her side. The intention of this, and mode in which it is expressed, are worthy of all praise.

In 464 he reverses the responsibility, for a poor little half-starved girl is asking of a portly baker, bread, whilst the white-headed blind

* See pp. 325, 348, *ante*.

grandfather is playing on the flageolet at the door of the shop to which she has led him. Both these illustrations are from Scripture text, and are equally sound in sentiment.

It is a fine line that separates power from coarseness, and Mr. V. Prinsep's "Berenice" (3) is open to the question of having crossed it. Ponderous rather than grand, with all its excellence of qualified rich colour, it must be conceded that where refinement is so sadly repudiated she can never be "such a lady, hands so white and lips so red," as Mr. Browning describes.

"My Lady Betty" (485), and "Benedick and Beatrice" (560), by the same painter, are further proof of rare ability, and stand less in need of a chastening influence.

(4) "Girl with Ferns," by Mr. Dobson, A., is nature refined, but nature still and very beautiful. Few look on this picture without desiring to possess it. (7) "Turtle-doves, Jerusalem," 1862, by Mr. W. Gale, very carefully studied; (29) "Awake" and (372) "Asleep," by Mr. H. O'Neil, A., are pleasing, if not the most favourable as examples of his skill; (62) "A Music Party," by Mr. A. Hughes, is poetical, and has the further recommendation of some beautiful passages of colour; but the lady is ill drawn, her neck to all appearance being dislocated; yet, there is much grace in this, as in most of its author's works. A charming notion is embodied in his village church scene (384), where some little children, more awake to a real presence than the understood one, are bathing their hands in a stream of sunlight, tinted with bright rainbow hues as passing through the stained glass of some memorial window, and, falling at the feet of a very old workman, it offers, apparently, almost a means of ascent to him, and most effectively elucidates the intention of Herbert's verse, "Then by a sunbeam I will climb to Thee," which has evoked this happy illustration.

(73) "An Interesting Topic," by Mr. Rossiter; (89) "The Knight's Guerdon," and "A Woman of San Germano" (518), by Mr. R. B. Martineau; (90) "The Interminable Story," by Mr. G. H. Boughton (very French looking); (137) "In a Spanish Venta," by Mr. D. W. Deane, are notable; and so are Mr. J. Archer's particularly pretty little lady as she stood to Valasquez (178), Mr. H. Wallis's (225) "Winnowing Corn, Capri;" (312) "The Lost Sheep," with two other highly-wrought studies of Eastern facts; (216) "Treading out the Corn: Lower Pool of Gihon, Jerusalem, May, 1862," and (383) "A Shop in Jerusalem," by Mr. W. H. Webb; (414) "The Flowers o' the Forest," by Mr. W. N. Orchardson; (483) "Gracenta," by Mr. R. Lehmann; (508) "Waiting for the Train," by Mr. E. Nicol (rich in character, and 391, by the same, is even better, and "among the old masters" places Mr. Nicol among the new); (523) "The Peepshow," by Mr. J. Burr, and (530) "Fun," by Mr. H. Burr (a falling-off after last year's contribution, though with sufficient good points to prove that the decline is but temporary); (527) "Hagar and Ishmael in the Wilderness" (a very old stock subject, with no novel aspect), by Mr. J. B. Bedford; (535) "In the East," by Mr. W. V. Herbert, jun.; and (545) "A Letter," by Mr. R. Carrick, are all indicative of great technical skill.

Mr. F. Sandys's "Portrait" (546), with its minute elaborateness, obtained without sacrifice of power, stands quite alone for the qualities that distinguish it.

INSTITUTION OF CIVIL ENGINEERS.

ON the 10th instant the paper read was "On the Means of Utilizing the Products of the Distillation of Coal, so as to reduce the price of Coke; with Descriptions of the Ovens and of the best Processes in use in Great Britain and on the Continent, in the Manufacture of Coke," by M. Pernolet, of Paris.

The author believed that this question had been practically solved, by the employment of existing ovens, to which certain inexpensive additions were made, and which, while still giving to the coke all the solidity, density, and lustre that distinguished good coke made in the ordinary way, enabled every product of the distillation of coal to be turned to account. This was effected, mainly, by keeping the coal from all contact with the air during its distillation, by performing that process very slowly, and by collecting and making use of the volatile products. The whole arrangement had been sanctioned by many years' experience, both in Belgium and France, where it was actively and profitably pursued at ten different establishments, with more than 400 ovens of the largest dimensions, capable of receiving from 5 to 7 tons of coal at each charge.

As to the cost, it was stated that the expense of altering each oven at St. Etienne was about 20*l.*; and that, as the value of the additional yield from each oven ought to be about 60*l.* per annum, this outlay should be repaid by four months' work.

The president's annual *conversazione* is to be held on Tuesday evening, May 31st.

ARTIFICIAL DIAMONDS.

AN ingenious Frenchman is said to have "taken out a patent for making diamonds," at Washington. "With two bushels of charcoal he can make a diamond that will weigh a pound." Does he expect his patented process to be perused and not imitated? The "patent" is rather suspicious: the discoverer of the way to make artificial diamonds is not at all likely to take out a patent for it. The improbability of making diamonds is not so great, however, as many—even chemists—may imagine. Indeed, a French chemist is said to have already produced very small ones by fusing carbon with the aid of borax. All that would be requisite to produce diamonds of large size would be the discovery of a solvent of carbon; and the alchemists were said to have possessed such a solvent and tincture. Just as alum dissolved in water can be made to crystallize into alum baskets, so might carbon, if it could only be dissolved in some fitting menstruum, be made to crystallize into abundance of diamonds. Carbon, to be sure, is regarded as an element, while alum is a compound; but it was Davy's opinion that diamond, too, was a compound, and not mere carbon, but probably carbon in combination with some slight tinge or tincture of halogenous material in it. Now, it is a curious circumstance that the alchemical accredited solvent of carbon, or diamond-producer, was called the hyle (or halogen) of the sages, and the elixir of the stone. Doubtful, however, as the alchemical diamond-producer may have been, we are inclined to regard the Frenchman and his patent as no less apocryphal.

DRINKING FOUNTAIN MOVEMENT.

AT the angle of a building at Vicar-lane and Church Bank, Bradford, Mr. Mills has erected a drinking fountain forming a part of the wall of the warehouse. It consists of an arched opening, supported by shafts of serpentine marble, the spandrel filled in with water flowers and ferns. The ground is a slab of polished red granite, with a moulded basin of the same material, supplied with water from a bronze lion's head, and with a silver-mouthed horn drinking-cup attached. The cost of the fountain was upwards of 50*l.*; and, along with the warehouses, it was designed by Messrs. Lockwood & Mawson.——Mr. Samuel Gurney, the chairman of the Drinking Fountains Association, has addressed us, appealing to the public for means to enable the Society to continue their exertions. The writer says:—"Through the instrumentality of this Association, upwards of eighty fountains have been already erected, at which it is computed that no less than a quarter of a million persons drink daily during the heat of the year." It is the desire of the Society to extend the boon as far as possible to every corner of the metropolis, so that the thirsty wayfarer may not be forced into the necessity of repairing to the public-house. Mr. Gurney invites subscriptions.

A PROPOSAL FOR AN ART RESULT SOCIETY.

UNDER this title Mr. Bruce Allen is proposing the formation of a new society, founded on the fact "that none of the Fine Art Educational Societies now existing seem competent to raise art, as applied to common objects in daily use, from their now artistically inexpressive state, as they are now executed by common workmen."

This proposed society would endeavour to create and help forward a radical change. "It would ask not only design, but execution,—not only for artistic design expressive of modern wants and feelings, but for artistic execution, embodying and carrying out in material such design.

It would regard designs and drawings on paper as means only, and not as ends, as is now the universal art practice, and would ask for the final result of all art power and action, whether in artists or workmen in material, *i. e.*, the object itself."

"In all cases the artist and workman would be credited with his work—irrespective of the architect, manufacturer, or seller—whether he be the artist draughtsman and designer on paper, thus indicating the work to the executive workman, a work now always to be done, or whether he be the artist workman, the actual executant. This is the one great essential of future progress in fine art."

"The chief and practical objects, therefore, of this society, or of any others that might spring from it, says the proposer, would simply be to offer prizes annually to arcist workmen and also to artist draughtsmen for specimens of their combined skill, *i.e.*, for the working drawing by the draughtsman, which served to guide the workman in his work; and also prizes for the actual work itself, as finally executed by the workman."

We do not perceive, at first sight, the difference between the object of the proposed society and that of the Architectural Museum, though the committee of the latter may not yet have been able to carry it out so completely as is desired.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION.

THE annual general meeting was held on the 11th, Mr. N. Gould, V.P., in the chair.

The report of the auditors appointed to examine the accounts of the Association was read, and it appeared that during the year 1863 the sum of 545*l.* 6s. 3d. had been received, and payments made of 478*l.* 0s. 7d., leaving a balance in favour of the Association of 67*l.* 5s. 8d. Fifty-six Associates had been elected; thirty had withdrawn, and ten had died. It was proposed also to erase twelve Associates for nonpayment of their subscriptions. Not a single debt remained unpaid. The congress held at Leeds, under the presidency of Lord Houghton, had been very successful; and Ipswich had been appointed for this year as the place of meeting, Mr. George Tomline, M.P., president; to commence on the 8th of August, and to be carried on to the 13th, inclusive.

Thanks were specially voted to the president, the treasurer, the auditors, the officers and council, &c.; and a ballot was taken for officers and council for 1864-5.

LIVERPOOL ARCHITECTURAL SOCIETY.

AT the annual meeting on Wednesday evening, the 4th instant, Mr. Weightman presided. Mr. Boult referred to an anonymous paper in the printed proceedings of the association, with reference to the Birkenhead docks, and which gave all the credit of the sluicing scheme to Mr. Hartley, and not to Mr. Rendel. He thought the name of the author should be appended. After some discussion, it was agreed that the names of the authors should be appended to all papers. Mr. Picton then read a short paper on "Classical Nomenclature as applied to Architectural Terms." Mr. Stirling reported favourably of the modelling class under his care. Mr. Samuel Huggins exhibited a chart he had prepared in explanation of his paper, read in January last, on the "History of Painting and Sculpture." The chairman awarded the prizes of the society to the successful competitors for designs for public drinking fountains; the first to Mr. N. G. Taylor, and the second to Mr. A. Jackson. The secretary read the report of the Council, from which it appeared that the number of members was 157. It was suggested that the annual excursion should be made to Manchester, Hoghton Tower, or Rufford. Manchester, it was thought for many reasons, was the most desirable. Mr. Horner, the treasurer, reported a balance of 8*l.* 13s. to the credit of the society. The following officers were appointed for the ensuing year, the election, as usual, being by ballot:—president, Mr. Joseph Boult; vice-presidents, Mr. T. J. Kilpin and Mr. W. H. Picton; hon. librarian and curator, Mr. Joseph Justin; treasurer, Mr. F. Horner; council, Messrs. William Hay, E. A. Heffer, W. H. Weightman, J. P. Bradley, and Frank Howard; hon. secretary, C. Z. Herdman. The president delivered his closing address.

BRICK FIREPROOF CONSTRUCTION.

It seems desirable to obtain consideration for the model illustrative of a system of brick fireproof construction, as set up by Mr. F. H. Groves, to which we recently referred. That the model fulfils what was expected of it is proved by the fact of its having stood seven months (it was finished the 21st October last), persons having been freely allowed to walk on the top of it, and the floor having been weighted by two tons. These tests it has withstood without the slightest appearance of settlement. The principle involved, if we understand it rightly, is that of balance. The arched floor and roof thrust against the walls, and this thrust is met by weight on the top of the walls. The floor and roof, however, being put together with quickly setting cement, become, to a considerable extent, solid slabs, with merely downward pressure. With reference to an observation in our previous notice, Mr. Groves writes,—"Let me remind you that every new principle of construction has required careful proceeding at its commencement. I well remember, when iron was not so well known as it now is, and the caution consequently that was exercised, when the five formulæ of Tredgold, mainly theoretical, formed the basis of the sections of girders, until by larger experiments, the compression and tension of metal was better known,—cast as one to six, and wrought as two to one or so,—and very different sections and disposition of the metal above and below the neutral axis were adopted. If such caution has been necessary in one, and I may say in every new principle of construction, then it is no objection to the one in question, for it is a difficulty which *all* have had to contend with."

HOUSES IN LIVERPOOL.

MR. RISHTON'S twenty-sixth annual report, as building surveyor, shows that during the year 1863, there were 2,015 dwellings erected, a number greater than in any other year since the passing of the Sanitary Act in 1846.

This increase has been chiefly in houses of which the rental is less than 12*l.* per annum, and in houses with a rental ranging between 12*l.* and 25*l.* per annum. Equal activity has prevailed in other departments of the building trade in the borough. Thus, the warehouses erected during the year were 68 in 1863, against 46 in 1862, which was above the average, and the number of extensive alterations made at existing buildings was 206 against 124. The probable cost of the building operations of the borough during the past year is estimated at 628,499*l.*

The reporter says:—

"The evils to which in former reports I ventured to direct the attention of your Committee in connexion with confined and ill-ventilated courts still continue, but it is gratifying to observe that the Council have taken the matter seriously in hand in the Sanitary Bill now before Parliament, and there can be no doubt, that when the measure becomes law, it will prove of immense advantage. Its beneficial effects will, however, to some extent be counteracted, unless proper measures are adopted for securing space for ventilation at new dwellings, more especially those known as terrace-houses—a class of erections now greatly on the increase."

Since the year 1838, 39,222 houses have been built in the borough of Liverpool.

IRON ARCHITECTURE.

A LIMITED lability company, with a capital of 500,000*l.*, in shares of 25*l.* each, is in course of formation, under the title of the Iron Architectural and Engineering Company, for developing the inventions of Mr. W. Vose Pickett, whose proposition to substitute iron for other materials in every description has been often alluded to in our pages. Mr. Pickett considers that the six primary principles of the system are—1. Canister, or hollow, iron walls, with cast chased or *repoussé* work ornamental surface, as a substitute for the solid wall and ashlared surface used in masonry. 2. Interstitial ornamental form, as a substitute for surface-carved, prominent, or basso-relievo form in masonry. 3. In close connexion with the first, and in contrast with the second principle, is the metallic low relief or intaglio form: this, though involving no invention, constitutes with the second two distinct characters to that of the one principle of relieve form in masonry. 4. As a substitute for the columnar portico, colonnade, and arcade of the ancient system, the metallic offers the suspension portico, the advantages of which are numerous. 5. The angular forms so prevalent in all erections in masonry, may be altogether dispensed with by the introduction of the curves of which metal so readily admits. 6. The sixth primary principle consists in the application of a coating of some kind, indispensable to iron, such as of glass enamel in colour, offering a cheap process of almost eternal durability.

SCHOOLS OF ART.

AT the Reading school 8 medals and 3 honourable mentions have been awarded, and five of the works have been retained for national competition.—At the Cirencester school 22 medals have been awarded, and nineteen works selected for national competition. There were also 3 honourable mentions.—The Taunton school has had 13 medals and 3 honourable mentions; and seven works have been selected for national competition. Only 27 works were submitted, being less than half the usual number, owing to the early date under the new arrangement.—Four medals have been awarded for the half year's work of the Stourbridge school, and 1 honourable mention.—The award to the Leeds school for nine months has been 41 medals, distributed thus among the central and branch schools:—Leeds 27, Keighley 8, Holbeck 6. There were also 9 honourable mentions:—Leeds 6, Keighley 2, Holbeck 1. The large proportion of 21 works has been selected for national competition, the largest number hitherto selected in any one year at Leeds being nine. Out of 27 medals awarded to the Leeds school, 14 have been obtained by the ladies in the morning classes.—The Carlisle school has obtained 12 medals and 1 honourable mention: 6 works have been retained in London for national competition.

COMPETITIONS.

Chester Town Hall.—Thirty-two sets of designs have been received, and are hung in the saloon of the Grand Stand. The mayor asked for power for the committee to call in professional assistance in making the selection, if needed, but the motion was postponed.

Brigg Chapel.—We hear that in a limited competition for Brigg Free Methodist Chapel, in which four designs were sent in, the first premium was awarded to Mr. Watkins. The other competing architects were Messrs. Bellamy & Hardy, of Lincoln, and Mr. Kitchen, of Hull. The chapel is intended to accommodate 350 persons, and will have schools beneath for 250 children.

Stockton-on-Tees.—In a recent competition for the New Ragged Schools and Master's House, Stockton-on-Tees, the designs submitted by Mr. Charles J. Adams, architect, of that town, were selected. The works are to be proceeded with at once under his superintendence.

Bradford Exchange.—The intended site of the new exchange between Market-street and Hustler-gate has been cleared of the old buildings, and the open space created by their removal affords such a pleasant breathing spot in the very centre of this densely-crowded town that many desire to see it kept open, and suggestions to that end are freely talked over, but the idea cannot be realized without the expenditure of a large sum of money, and there is little probability, therefore, of the ground being kept open. Meanwhile the directors of the New Exchange Company have received six sets of plans for their new building, and they are at present on view in the large room of the Exchange-buildings, preparatory to the directors making a selection. With one exception, which is in Italian, the elevations of the several plans are all in various forms of Gothic architecture, and the building in each case is intended to present a lofty tower over the entrance at the point known as "Bartle's-corner."

CAMPANOLOGY, OR SCIENTIFIC RINGING.

A LECTURE was lately delivered at Launceston, to a numerous audience, on "Church Bells and Campanology," the lecturer being Mr. H. R. Trelawny (brother to the M.P. for Tavistock), a member of the Ancient Society of College Youths. It was listened to with great attention by those assembled, amongst whom were many of the clergy and gentry of the neighbourhood. After an interesting account of bells, their origin, method of founding, and ringing, the lecturer enlarged at some length on the lamentably low standard in which bell-ringing stood in Devon and Cornwall; noticing the fact that the bells had, in most cases, fallen into the hands of the least intelligent and worse conducted characters; whereas change-ringing was an act requiring infinitely more exercise of intellect and skill than—as people generally thought—of bodily exertion. He also noticed that the neglected state of the bells and their fittings not only endangered the bells and their steeples, but rendered ringing three times more laborious than necessary. The lecturer proceeded to explain some of the various methods of change-ringing, which were illustrated by some peals of scientific changes on the hand-bells, assisted by another member of the Society of College Youths, Mr. M. Kelly, of Kelly, and some ladies, members of their respective families. Two peals of grandsire doubles, consisting of six-score changes were rung, and brought round with considerable skill, in about six minutes, each round being changed—not by lapping or crossing the bells—but by scientific striking, the gentlemen handling two bells, and each lady one. The peals were conducted by an amateur, who called the bobs.

It appears, from Mr. Trelawny's own account, that a letter, dated from Gloucester, signed F. C. B., and published in two or three papers, induced him to turn his attention to the art of bell-ringing, as it was advocated in that letter; and that about two months ago he bought two little books,—"Hubbard's Elements of Campanology," and Maunsell "On Church Bells;" and his first feeling, after a few days' study, was his surprise that such an ingenious art should be all but unheard of in the West of England.

It is to be hoped that this movement, so well begun, will be followed up in the West of England, and be the means of placing change-ringing in its proper position.

ECLECTICISM IN ARCHITECTURE.

IT may be urged in favour of an eclectic style of Gothic architecture that, in these days of railways, architects have a facility of visiting foreign countries, and that the true spirit of our age is cosmopolitanism, and a desire to break all national differences. Now, this seems to me to be especially absurd in architecture, since, in the Middle Ages, it grew up in each province to suit the wants of the inhabitants, and was principally affected by the materials at hand wherewith to build. Moreover, Mediæval architects travelled; if not to the extent of modern men, yet they did not commit the folly of building in England in a manner suited only to drier and more southern climates. They were essentially aware of the different climates and wants of provinces, and never introduced any glaring inconsistency. In the case of their foliage carving, or their tracery, they developed something truly national and widely removed from the Classic feeling that prevailed in France,—something in true accordance with English tenderness and love of nature. Who is there possessing the slightest sentiment of national poetry that would desire to substitute foreign folk-lore for our own,—to substitute foreign poetry for our own,—or to make an unmeaning jumble of all national writing without individuality,—without national spirit? What has ever proved such an utter failure as French eclectic philosophy? Has any eclectic system of metaphysics ever held its own? Do we not seek in all things peculiar national traits? And yet our modern architects desire to upset this absolute law of nature by introducing French and Italian Gothic into England.

If its merits are tried in our own scale, we find foreign Gothic to be deeply wanting in delicacy and refinement. French mouldings are coarse beside the exquisite tenderness of English work; French foliage is stiff and unnatural beside the play of English; plate tracery is heavy beside the chaste thinness of our own; French work is heavy and grand beside our small lightness; the North French plains are very different from our meadows; and scenery has ever had much influence upon the true architect. Altogether, let me ask, why are we to be French instead of English?

X. X. X.

THE NATIONAL ALBERT MEMORIAL.—The site of the intended memorial in Hyde Park has been surrounded with a hoarding, and excavations are being made for the concrete foundations. Mr. Kelk is the contractor.

TIVERTON NEW TOWN HALL.

THIS building, to be inaugurated on this, the 19th inst. by Lord Palmerston, the Premier, who for many years has been, and still is, the Member of Parliament for the borough, has been erected partly on the site of the old town-hall, partly on the old approach to St. Andrew's-street, and partly on land purchased by the Corporation of Mr. J. B. Cannon, proprietor of the Angel Hotel, adjoining the new building.

In 1862, the town council advertised for plans for a new town-hall, when sixty-two designs were sent in; the first premium of 50*l.* being awarded to Mr. Henry Lloyd, of Park-street, Bristol, the architect under whose superintendence the present building has been carried out. Many difficulties presented themselves, owing to the peculiar shape of the ground to be built upon, which the architect has creditably overcome.

Our engraving represents a perspective view of the new building facing St. Andrew's-street and the end of Fore-street. The style of architecture adopted is Venetian Italian, of a conventional character, in which stone and marble of various colours are used.

The principal feature in the design is an octagon tower, which, to the top of the weather vane, is carried up to a height of 100 feet, the roof of which terminates in a square, surmounted by ornamental galvanized cast-iron cresting, from which springs a handsome weather-vane, supplied, together with the other castings on the main roof and square tower, as also the moulded cast-iron shutes, from Messrs. Macfarlane's foundry at Glasgow. In the centre face of the octagon tower towards Fore-street, there is a semicircular pediment, with finial, in which provision is made for an illuminated clock: there are also circular louvres in four sides of the roof. On each side of the octagon there are massive chimney stacks, with moulded caps and bases. At each angle of the first and second compartments of the octagon tower are fixed detached red Devonshire marble columns, with richly carved Corinthian freestone capitals, with entablature and consoled cornices: the columns are fixed on freestone pedestals, and stand out in bold relief: they were supplied by Mr. Bluckler, marble mason, of Dawlish, and are the largest ever put up in Devonshire, being on an average 1 foot 9 inches in diameter. The main or principal entrance, which is 12 feet high by 6 feet wide, is at the base of the tower, having suitable antæ and archivolt, with richly carved keystone; there are also three other entrances from St. Andrew's-street,—one for the police office, one for private entrance, and one to the court-yard at the south end of the building, which is fitted up with water-closets and other conveniences.

The building down St. Andrew's-street terminates with a square tower, in which there is a stone staircase leading up to the hall from the cells and police-office below, by which prisoners can be taken to and from the court, without interfering with the public.

The back of the building, towards the Angel-yard, as also the north and south ends, are faced with Westleigh stone, with Bath stone dressings to windows, quoins, and string courses.

The principal fronts, towards St. Andrew's-street and Fore-street, are filled in between the marble columns and Bath stone work with grey

See p. 388, ante.

Pennant stone ashlar. The pilasters to police doorway, the rockwork base, also the steps, are of the same material, which, together with the stone staircases, sanded paving, &c., have been supplied from Mr. Lawrence's quarries, at Stapleton, near Bristol. The pilasters named are 8 feet high by 2 feet 6 inches square, in one stone each, and weigh upwards of four tons. The ground-floor of the building is appropriated to magistrates' offices, town clerk's offices, committee-room, muniment-room, police-office, and lock-up cells, with wide and capacious passages of communication. On the second floor is the town-hall, mayoralty-room, and grand jury-room, with anteroom, and other offices. The town-hall is 50 feet by 32 feet, and 27 feet high, well lighted and ventilated: at the north end of the hall, over the grand jury-room, is a large gallery fitted up with seats for the public, and from which all proceedings in the court can be seen. The new hall will be used only for council meetings, petty and quarter sessions, and county-court business.

Adjoining the hall, is the mayoralty-room, 40 feet long by 26 feet wide, lofty and well lighted; there is a small anteroom adjoining this room, with a door into the hall.

Over the mayoralty-room there is another large room forming the upper compartment of the octagon tower, in which it is intended to fix the works of the new clock. In the basement of the building there are capacious cellars for coals and stoves; also a chamber for a warm-water heating apparatus, by which the cells, muniment-room, and town-hall are heated.

Gas has been laid on to the various rooms and passages, and star-light burners of various sizes are fixed. A new foot pavement has been laid, and cast-iron lamp-pillars with globe lamps are fixed up. Since the commencement of the building, the Corporation have arranged with the trustees of St. George's Chapel, and have obtained a faculty granted by the Bishop of Exeter for taking down a portion of the old boundary, which formerly divided the churchyard from the old townhall, and have erected a new line of wall, and put up appropriate iron railing which, together with the lowering of the Angel Hill some 2 feet, a great improvement long needed in this particular locality, has been effected, there being now therefore a completely unobstructed view of the whole of the eastern front of the new building.

The general contractors for the various works were Messrs. Williams & Parish, of Tiverton, builders; the sub-contractors being Mr. Beck, for the plumbing, painting, and glazing, and Mr. Rundle for the smith's and iron work, the latter having a special contract for the heating apparatus and gas-fittings.

The total cost of the works, including purchase of land, improvements, &c., amounts to about 8,000*l.*

THE STOCKPORT BOROUGH SURVEYORSHIP. — About sixty-seven applications have been sent in to the Local Public Works Committee for the appointment of surveyor to the Corporation, at a salary of 250*l.* per annum. The list was reduced to three, but the successful candidate was not then appointed.

TIVERTON NEW TOWN HALL.—Mr. Henry Lloyd, Architect.

THE MONEY VALUE OF ENGLISH ART.

In the days of Sir Joshua Reynolds and Gainsborough, while enormous sums were paid for the works of ancient masters, modern painters were content with a sum so small that their incomes, except in a very few instances, were barely sufficient to keep soul and body together. In these latter days, however, the painter who has succeeded in reaching the summit of his art obtains a large pecuniary recompense and an honourable position. It is true that the painter has often devoted many years of his life to study and practice without any such recompense, but the same may be said in connexion with architecture, law, literature, and other intellectual pursuits.

Some facts in connexion with the prices paid to modern artists were mentioned the other day in the House of Commons, by Mr. Gregory. In arguing that Mr. Herbert and Mr. Maclise were paid for their work in the House far less than they could earn in the ordinary pursuit of their profession, he reminded the members that Mr. Frith had received 8,700*l.* for his picture of "The Railway Station;" and that 5,500*l.* had been paid to Mr. Holman Hunt for "Christ in the Temple." He mentioned that for some years previously to undertaking the frescoes at Westminster, Mr. Herbert's income had been 1,800*l.* a year, whilst under Government, for the last six years, it had not been 500*l.*; and that the gains of Mr. Maclise, twelve years previously to his present undertaking, had been 2,000*l.*, 3,000*l.* and 4,000*l.* per annum—and, in one year, as much as 8,000*l.*; and yet, for seven or eight years, the whole amount of payment to him by the public was only 7,000*l.* Mr. Gregory urged, as we think rightly, that these gentlemen, who have so ably done their duty to the nation, should have additional recompense from the House. This suggestion was supported by various members; and the Chancellor of the Exchequer said that Mr. Herbert had told him that Mr. Dyce had left upon the walls more than two or three times the value of what he had received. There were others whose claims had also to be considered. This was a matter of extreme delicacy. What the Government proposed to do in connexion with Mr. Herbert was to vote to him a sum of 1,500*l.* in addition to the 2,000*l.* which he had already received; but they did not intend that this should be the final settlement of the question. The Government proposed to form a small commission of persons, judiciously selected, for the purpose of impartially advising them as to the course that ought to be pursued.

Sir George Bowyer remarked that the case of Mr. Herbert did not stand upon the same grounds as those of the other artists. Finding that the process which he had at first adopted was not calculated to preserve the pictures, he had destroyed 400 feet of painting in order to adopt another and better process. There was also this particular circumstance with reference to Mr. Herbert,—that his work was of super-eminent merit,—that it went beyond anything heretofore seen in this country; and therefore it stood apart from the cases which had been mentioned in connexion with it. He did not think that the proposed commission would meet the merits of the case. The country ought to deal generously with Mr. Herbert, who had thrown his whole soul into the subject, and had produced a really great and sublime work, about which there could not be two opinions.

After various observations by other members, Mr. Gregory accepted the proposal of the Chancellor of the Exchequer.

WORKING MEN'S EXHIBITIONS.

The recent exhibition of objects of artistic design and skilful make in Lambeth is likely to lead to good. The exhibition of examples of skilled labour is by no means a new idea. In the *Builder*, some time back, an account was given of trade displays in the towns in the North of England on various days. At Newcastle-on-Tyne several of the trades walked in procession, many of the men carrying articles which they had made during their spare time. These processions took place up to the last thirty or forty years, on the saint's day of the craft. As time moved on, instead of *walking* in the streets, meetings were held in rooms; and there is little doubt that those exhibitions were the means of leading to the opening of the great display of art-manufactures in Newcastle.

In London, with its vast population, opportunities for bringing the various classes together are valuable. With good management the late Exhibition would have been more useful than it was. Nine-tenths of the workmen of the metropolis had very little useful knowledge of the matter: we trust, nevertheless, that the example set will not be without effect, and that we may have similar exhibitions in various parts of London.

In Lambeth recently, the display was in a chief manner brought about by the exertions of the clergyman of the district; and we could mention many instances where very great advantage has been the result of similar agency. The clergyman, when he is disposed to move in this way, soon meets with those who usefully assist him in his work. On mentioning this idea to a gentleman who has charge of a North-London district, he said, "How can I do it? There are sermons to write; the sick and schools to visit; and there are over twenty-two thousand persons in my bounds, and only one curate and myself to attend to them." This is, unfortunately, the case in other parts; but where there is a will there is a way; and we have found, in far larger populations, the advantage of the help of the clergyman in aiding such movements, which advance the general intelligence and promote social progress. Such displays bring people of similar pursuits together; but besides this, a great advantage would result from the inducement which such opportunities afford for the employment of spare hours. Those who have visited the houses of the industrious classes must have often felt surprise at the objects which are to be met with, and which have been made in leisure hours.

ACTIONS FOR EJECTMENT.

Sir,—I think all industrious and honest investors in house or land should look into the effects of Lord Westbury's Acts as affecting title, but more especially his Insolvent Acts. I know by most bitter experience that it is now of no use to arrest a scoundrel who has put you to the expense of defending two actions at law; for if you arrest for the costs you have been put to, he can, almost directly after arrest, get out of prison without payment of one farthing—by the new Insolvency law. I consider I am indebted to Lord Westbury's extraordinary Registration Act for the loss of four years' rental, and infinite vexation and annoyance. Advantage has undoubtedly been taken of that circumstance by a rascally solicitor to endeavour to extort money from me by an old probate of the days of Washington (long ago acted on), and endeavouring to substitute one man for another to obtain an estate long after living memory.

Why the copyholder should be debarred from registration by statute of his ancient title, as well as the freeholder and leaseholder, I know not; but so it is.

Every copyholder is now liable (owing to that circumstance) to the most illegal claims being set up to his property, *being debarred registration.*

I myself had eighty years' title by direct descent of inheritance, and eighty years more from the family from whom it was originally purchased; and what I have been told by three solicitors is a very good title, there being two recoveries amongst those old deeds. The unfortunate defendant in actions of ejectment, occasioned by circumstances over which no man or landlord could possibly have control, an aged tenant's grief, who alone had been on the land forty years, at the loss of his wife—occasioned my not hearing thereof, and advantage was taken of this circumstance to obtain a judgment against the land of which I was entirely ignorant. I am not only obliged by law to defend the tenancy under a writ of ejectment so improperly filled up that not even the abode of plaintiff is mentioned therein; but after a very cool attempt at extortion to defend the title against men who dare not give evidence before a judge, to find statutes and charters utterly set at nought for want of proper security for costs and recognizances for legal recognition of the attorneys that it is a just claim. To find, also, that the record can be withdrawn at the court doors (with perfect impunity to the transgressors) and payment of all costs (under Lord Westbury's Insolvent Acts) by the unfortunate defendant. More threats, too, of actions. The statutes of England stating after forty years (being a nullity), no action can be brought for want of a court of appeal in such cases to show the title to the land has been deliberately stolen, neither is there any statutable punishment under the Act of Limitation for so doing.

Many years ago one of the judges of Her Majesty's Court of Queen's Bench published a work of much merit on this very important point of defective judicature. It is noticed in the *Literary Gazette* of between 1830 and 1845, but in what volume I can hardly say, showing that the court of appeal had been done away with in the abolition of the Star Chamber, during the reign of King Charles II., and none other established to replace it, to the great wrong and injury of every honest man in the kingdom, and the constant insecurity of title in consequence.

This state of law ought to be well looked into; and I sincerely trust that you will give this matter your earnest consideration, as affecting every man in the kingdom, whether high or low, rich or poor, that some remedy may be found, property protected, and capital invested with security.

M. W. Harrison.

MULLIONED WINDOWS.

The author of the paper describing Nun Appleton in a recent number of the *Builder*, says of the window-sash "that all architects of the present day find it difficult to apply it consistently to the mullioned window."

It strikes me this difficulty might be overcome by making the whole window-sash *in one*, with transoms, mullions, and weights, and making it slide upwards into the arch of the window ope (which should be built double on purpose) as in the grooves of a portcullis. The plan would occasionally interfere with the splayed recess now in use at foot of the window in the room above; but window seats, formerly so prevalent, would obviate any difficulty on this head, and give sufficient thickness to the wall into which the sash would ascend to admit of grooves. The ascent of the sash would not need to be higher than three feet from its sill. Ventilators being now generally employed (which, pierce the upper part of the walls of rooms), a sufficient opening for air or contemplation of the landscape could thus be obtained, as at present, and thus would be combined with all the impermeability of the modern sash the beauty of the mullioned window.

J. C. Fitz-Gerald Kenney, J.P.

CAUTION TO SPECULATIVE BUILDERS.

IRREGULAR STRUCTURES.

Recently Mr. William Aldred, builder, of Harper street, New Kent-road, appeared to an adjourned summons at the instance of Mr. W. Snooke, district surveyor of Rotherhithe, Hatcham, and part of Camberwell, charging him with constructing the party walls of four buildings on the south side of Church-street, Rotherhithe, contrary to the provisions of the Metropolitan Building Act. The complaint was that the walls were not properly bonded, that a greater portion of bats than bricks were used, and that the mortar was bad, being composed of mould and lime, and no sand. The defendant denied that the work and materials were what was described, and it had been agreed to defer the case to allow of examination by Mr. Pouget, whose name was quoted by the builder as an architect to whom he was known, and who attended the court, and gave evidence that the work was very indifferent, not so well put together at the top as at the bottom, and that in his opinion the work which had been carried up two stories ought to be pulled down to within 2 feet at least of the one-pair floor. The defendant complained that the pulling down would be ruin to him; but Mr. Maude told him that if he and other builders chose to ride so close to the requirements of the Act of Parliament as to necessitate proceedings being thus taken by the district surveyor, having been repeatedly cautioned by him, and having carried up the works in defiance of repeated remonstrances, they must not be surprised at proceedings being taken against them. An order was then made to have the work demolished to the extent named, and as much lower as the district surveyor found necessary. The defendant was ordered to pay all the expenses and the costs of the district surveyor's attendance, which that gentleman requested the magistrate to give to the poor-box of the court.

THE LEVELS OF STREETS.

Sir,—Will any of your correspondents inform me what is the law, or the practice with borough surveyors, with regard to fixing levels of streets under the following circumstances?

A street with considerable and very irregular inclination has been laid out, drained and partly built upon in the centre of the town. The plans for the buildings have passed the Local Board of Health. Some of the buildings are opposite each other (in a 12-yard street), but the inclinations of the causeways, or foot-paths, vary considerably. Another party is about to build, higher up the street, where it is supposed the road will have to be lowered two or three feet. The Local Board have passed the plans, but refuse to let their surveyor fix the levels, though the street has been used in its unpaved state for years. If the building is erected and the inclination of the street be materially altered from what the supposed level may be, the building will be considerably damaged, as it is for a public school.

A. B.

CHURCH-BUILDING NEWS.

Leicester.—Earl Howe has given a donation of 500*l*. towards the erection of a new church in the populous district of Christ Church, Leicester, and 500*l*. for the general purpose of church extension in Leicestershire.

Marsworth (*Bucks*).—Marsworth Church is a Third Pointed edifice, consisting of a nave and chancel, with a south aisle to both, wider than, and of the same height as, the nave itself. The tower stands at the west end of the nave. The roofs are for the most part flat, and covered with lead. The nave and aisle have been filled with simple open seats, of deal. The passages are paved with Minton's tiles. The chancel seats are of oak, and are on the north side only. The two arches on the south side of the chancel, opening into the aisle, are filled in with a parclose, the lower part of which is of oak, and the upper part ornamental wrought-iron work. Attached to the eastern parclose are two sedilia. The floor has been laid with Minton's ornamental encaustic tiles, in geometrical patterns. The reredos is of stone, with patterns and devices, inlaid in marble and cement. On the south side a new porch, of oak, has been built. The gable, bargeboard, side-panels, &c., are ornamented with pierced patterns and tracery. The chancel-seats have been executed by Mr. Forsyth, and the reredos by Messrs. Poole. The rest of the works was by Mr. Cooper, of Aylesbury, under the direction of Messrs. Slater & Carpenter.

Rype (*Sussex*).—Rype Church has been completely restored and re-opened. It consists in plan of a lofty and broad nave and chancel, and a western tower. The style is Decorated, the east window having five lights with flowing tracery. The nave roof, which is of the usual Sussex type, with trussed rafters, &c., has been restored. The chancel roof is entirely new. The nave has been filled with open seats, of deal, the western gallery and filling in of tower arch being removed. The chancel seats are of oak. In the chancel arch has been placed a low wooden screen, with perforated panels. The chancel is paved with Minton's encaustic tiles. The windows throughout the church have been re-opened and restored, and filled with grisaille glass by Messrs. Lavers & Barraud. The chancel seats, base of pulpit, eagle, and screen have been executed by Mr. Forsyth; the brasswork of pulpit, the crosses, coronæ, &c., by Mr. Potter; the other portions of the works by Mr. Parsons, of Lewes, and Messrs. Piper & West, of Rype. The cost of the whole has been defrayed by the rector, the Rev. R. S. Sullon; and the works have been carried out under the superintendence of Messrs. Slater & Carpenter.

Madehurst (*Sussex*).—The chancel of Madehurst church has been rebuilt on a larger scale, and a larger chancel arch inserted in the wall between it and the nave. The nave has been reseated throughout with low open seats, and the old roof has been exposed to view and put in repair. The gallery has been removed, and a new two-light window opened in the south wall. A new aisle has been built, and the north wall of the nave taken down and two arches built in its place to connect the nave and aisle together, the old nave roof having been carried on shoring during the reconstruction. The tower has a new two-light window to light the lower stage, and three quatrefoils have been inserted in the belfry stage. The floors of the church throughout have been paved in tiles laid in patterns. The stained glass in the east window is for the most part new. The tiles for the floors have been supplied by Mr. Godwin, of Lugwardine. The marble work has been executed by Mr. Field, of London; and the stained glass by Messrs. O'Connor, of London. The builder's work has been executed by Mr. J. Ellis, of Chichester. The architect was Mr. T. G. Jackson, of London.

Brading (*Isle of Wight*).—The parish church is about to be put into a state of repair, at the expense of Sir Henry Oglander, bart. Mr. T. Hellyer, of Ryde, is the architect.

Longfleet.—St. Mary's Church, Longfleet, is shortly to be enlarged. The works proposed are the building of a new chancel, and the removal of the pulpit and organ to more convenient positions, whereby eighty-five extra sittings will be secured. The present accommodation at the church is 478. The cost of enlarging is estimated at 600*l*., of which 200*l*. are unprovided.

Tewkesbury.—A preliminary meeting of the principal inhabitants of this town, convened by the churchwardens, has been held at the Townhall, under the presidency of the vicar, to consider the best means of promoting a movement towards the restoration of the abbey church. It was determined to request the mayor to convene a public meeting on the subject for an early day.

Yeovil.—Preston Church, which has been for some considerable time under restoration, is now formally opened. The church in itself possesses no remarkable feature, but since the works of restoration its appearance has been improved. It consists of a nave and chancel, the latter of which is a continuation of the former, being similar in all respects, the old rood screen, which used to define its limits, having been done away with. It is of the Perpendicular style of the fourteenth century. Before the restoration the building was in a sad state of dilapidation: rotten plaster, wormeaten timber, and huge pews offended the eye; and the supporting walls, which had got considerably out of the perpendicular, must have filled the minds of the worshippers with anything but feelings of safety. Little has been done to alter the general character of the architecture, but numberless small improvements have been made: deal-box pews have been replaced by oak seats of modern style—rough flooring by encaustic tiles, and crumbling woodwork, and discoloured plastering by new. A stone pulpit has also been added, and a new porch improves the exterior. Mr. Shout, of Dorchester, carried out the repairs.

Hardington (*Somerset*).—The parish church of Hardington, which has just been rebuilt, is now open for divine worship. The old church having become so dilapidated that it was dangerous, it was resolved a year or two ago to take it entirely down, and erect a new church upon its foundation. Mr. Pearce, of Haselbury, architect, was requested to prepare the necessary plans. Tenders were invited, and that of Messrs. Draper, builders, of Crewkerne, for 950*l*., was accepted. In April the old building was pulled down, with the exception of the tower, which therefore remains unimpaired. The church is founded upon the rock, and a great portion of the stone used in the new building has been dug on the spot. Much of the Ham Hill stone for the facings, windows, &c., was taken from the old building, and reworked with new supplied from the quarries of Mr. Charles Trask, of Norton-sub-Hamdon. Messrs. Draper are the contractors. The new edifice will seat nearly 200 persons. The cost of the entire rebuilding has been a little over 1,000*l*. The old church, in common with nearly all the Somersetshire churches, was built in the Perpendicular style of the fifteenth century, and the tower, which remains, is also in that style. But in the new church the style selected is the Decorated, which prevailed a century previously. There are also Early English lancet windows on the south side of the chancel, and the arch between the chancel and its aisle is Norman, suggested from two or three relics of an ancient Norman arch discovered in pulling down the old walls. The church, as now arranged, consists of a nave and chancel, with an aisle on the north side extending throughout, a porch on the south side, and the old tower at the west end, containing five bells. The east window is of three lights, with circles containing trefoils in the head, and filled with stained glass. In the south wall is a small single lancet window and one of three lancet lights. The nave is lighted on the south side by three windows of two lights each, with decorated tracery in the heads, and hood mouldings inside. The lower story of the tower opens into the nave, from which it is divided by a carved oak screen. It is lighted by a Perpendicular window of three lights over the doorway. The north aisle, under a lean-to roof, is lighted by four small single-light windows with heads, and by a two-light window at the west end. The aisle is divided from the nave by five arches, exclusive of the Norman arch in the chancel already referred to. The floor of the chancel is paved with Minton's encaustic tiles, and the rest of the church with blue lias. The roof is of stained red deal, with curvilinear struts resting upon Ham stone carved corbels. In the chancel, the bosses at the intersections of the roof-tracings were carved by the Rev. Mr. Hancock, of Haselbury. The old carved oak altar has been retained, the old pulpit adapted, and a new lectern and reading-desk supplied.

Newlyn (*Cornwall*).—The first stone of a new church has been laid here for a new parish, including Street-an-Nowan, near Penzance.

Middlesborough.—Christ Church, which is to be built at the sole cost of a gentleman whose name is well known in connexion with local charities, is shortly to be commenced with. The plan is a simple parallelogram, comprising nave aisles, and a large chancel. The church will be built of common brick, with bands of black brick, and will be lighted by lancet windows, and dormer windows, above the aisles. The seats will be open throughout, and they will all be free and unappropriated. It is expected that the church will be ready for consecration by the 1st of November.

ROMAN CATHOLIC CHURCH-BUILDING.

Croydon.—The new Roman Catholic church, dedicated to "Our Lady of Reparation," has been opened here for divine service. The church, which is of Early Gothic style, is situate in the Wellesley-road, nearly opposite the West Croydon Station. The edifice is 75 feet from the bottom to the chancel, the chancel 18 feet, and the height 42 feet. The roof is of open timber-work. The architect was Mr. Pugin, of Ramsgate; and the builder, Mr. Smith, of the same place.

Turnham-green.—A new Roman Catholic church has been opened at Turnham-green. It has been built from the designs of Messrs. Wilson & Nicholl, of London. It is a small building, Gothic in style. There were present Cardinal Wiseman and many other ecclesiastics, and a large number of the laity. After the service the cornerstone was laid of new Roman Catholic schools, which are being erected in the same neighbourhood from designs of Mr. Pugin.

Liverpool.—The foundation-stone of the Roman Catholic Church of St. Michael has been laid on a piece of land adjoining the St. George's Industrial School, and opposite the Zoological Gardens, West Derby-road. The new church will face West Derby-road, and adjoin and run parallel with the St. George's Industrial Schools on the one side, and a new street on the other. The front will be set back a few feet from the road, and it will present a gable end, divided by two buttresses, surmounted by angles with crosses. Between the buttresses the front will be recessed and arched over. Enclosed by the arch will be a circular tracery window, some 15 feet diameter; below, an arcading, with stone arches and pillars, having seven narrow windows between the pillars. The doorway will be recessed and moulded. The space above the door and arch will be carved with a group of angels and St. Michael. The height of the gable to the top of the cross will be 76 feet, and the extreme breadth of front 53 feet. The side of the church parallel to the street will present an aisle without windows, but having sculptured panels, and divided by buttresses. Above will be the clerestory, with coupled lancet windows, nearly 13 feet high; the windows to be continued of the same size round the apsidal end of the chancel. There will be 36 of these windows in the clerestory. The church inside will be about 106 feet long by 50 feet wide. There will be three confessionals and two sacristies on the side next the school. The roof of the nave is to be of a high pitch, and exposed to view over the chancel, also arched and panelled; the roofs of the aisles to be carried on arches. The church will be built of patent red brick, with bands of blue brick, and dressing of Stourton stone. The contract has been taken by Mr. G. Glaister, of this town, for about 3,400*l*. Mr. E. W. Pugin, of Ramsgate and Liverpool, is the architect.

Dalkeith (*near Edinburgh*). There has been erected in St. David's Roman Catholic Church, Dalkeith, a new altar, in Caen stone, divided into panels by marble columns. In the front is a perforated iron rail, in which are contained the remains of an early martyr, taken out of the catacombs of Rome in the year 1856, which was presented to the foundress of this church by the Pope. The altar was designed by Mr. G. Goldie, architect, London, and executed by Mr. Earp, carver, Lambeth. The whole consists of about seven tons of carved work, including the illuminated encaustic tiles and the panels.

DISSENTING CHURCH-BUILDING NEWS.

Walworth-road.—The new Baptist chapel in Walworth-road has been opened for divine service. Messrs. Searle, Son, & Yelf, of London, were the architects. Messrs. Sharpington & Cole, of London, completed the building, the original contractors having failed. The chapel

is 75 feet by 49 feet, capable of seating about 850 adults, with extra accommodation in pews in the gallery for Sunday-school children. There is a lecture-room, capable of holding 150 persons; a minister's vestry, with deacons' vestry adjoining; and, on the floor above, a ladies' vestry, with store-closet for a benevolent society, and two large class-rooms with separate entrances. The cost of the building, including boundary walls, iron fencing, gas, commission to architects, and all expenses connected therewith, is 5,550*l.*; whilst the fittings and furniture, including both downstairs and in the gallery, cushions to all the pews, gas-stoves, and seats for lecture-hall, is 350*l.*; making the total cost of the building and furniture 5,900*l.*

Clapton. — The foundation-stone of a new Wesleyan chapel has been laid, on a plot of ground situate in the main road, opposite the Pond, at Clapton. The structure to be erected will be in the Gothic style. The architects are Mr. John Tarring and Messrs. Hammack & Lambeth. The contract for the erection has been taken by Messrs. Dove, Brothers, of Islington, for 4,515*l.*, and the works are to be carried out under the superintendence of Mr. W. Southam. The sittings are estimated at 1,150.

Ilfracombe (Devon).—The new Wesleyan chapel here has been opened. The site presented difficulties from its irregular shape, great inclination, and the soft nature of the ground requiring additional expense to secure for the buildings a good foundation. The buildings comprise the chapel, school-room, minister's vestry, two class-rooms, closets, and other conveniences. The chapel will accommodate about 500 persons, while its roomy aisles will seat many more when emergencies require. The school-room will accommodate about 200 scholars. The style carried out in the traceried windows, string-courses, turrets, &c., is the Decorated Gothic in its transitional period. The external walls are faced with Appledore stone. The dressings are in Bath stone. The plan of the chapel is a parallelogram, 55 feet by 34 feet, from which recesses are taken by a circular division wall for staircases to galleries, ascending on either side from a large entrance lobby, paved with Maw's encaustic tiles. The elliptical ceiling springs from a wood cornice, to the height of 32 feet from the floor, and is divided into panels by moulded groins. Two of the centre panels have ornamental flowers, pierced for ventilation. The whole of the seating on the ground-floor is swept from a centre to face the pulpit. The pews are open, with inclined backs, book-boards, and hat-rails. A light gallery runs round three sides of the chapel, supported on cast-iron Gothic pillars, having an organ recess over the entrance lobby. The front of the gallery is divided into panels filled in with cast-iron tracery, and finished to resemble wainscot oak carving. The windows are glazed with obscured glass in diamond panes, each window having a border of different coloured glass. The circular west window is filled in with stained glass. The whole of the glass was provided by the Messrs. Hall, of Bristol. The gasfitting was carried out by Messrs. Garton & King, of Exeter. The whole of the painting and staining has been executed by Mr. Bradley, of Exeter. The original estimate for the whole premises was about 1,500*l.*, but in the course of construction it was found that several additions and alterations, such as the greater elevation of the roof, and the increased width of the school-room, necessary to the completion and perfection of the building, had to be added. These swelled the original estimate to 1,750*l.* The architect was Mr. A. Lauder, of Barnstaple; and the contractors were Mr. J. Hartnoll, builder; Mr. J. Parminter, mason; and Mr. B. Williams, statuary, also of Barnstaple.

Aston Park (Birmingham).—The memorial stone of a new Baptist chapel has been laid in Aston Park. The piece of land upon which the chapel, now in course of erection, stands, contains 2,194 yards. The land and the building will cost 4,760*l.* The members of the committee have subscribed about 1,000*l.* The chapel has an area of 72 feet in length and 42 feet in width, fitted up with open sittings on the floor and in side and end galleries, arranged to accommodate 754 persons. The shape of the building is adapted to the peculiarities of the site, by placing the tower and spire and the main entrances at the end of the ground, where it comes to a sharp point by the meeting of Victoria and Alma streets. The tower and spire so placed are connected with the main building by corridors and entrances, three of the four sides being entirely open to view, and the fourth only partially concealed by the facing to the chapel. The height of the tower with spire is 115 feet above the level of the ground. At the end of the chapel, facing the entrance, is a semi-circular recess with raised platform, upon which the pulpit and open baptistery will be placed. Above the platform is a gallery for the organ and choir; and in connexion with it on either side are vestries for ladies and deacons, with library and minister's vestry above them. Adjoining the vestries, and with distinct entrances, are schools for boys and girls, each room being 50 feet by 20 feet. The style of architecture adopted is Gothic, of early character, mainly carried out with red bricks of the ordinary kinds; the windows, doorways, cornices, spire, and such prominent parts being of Bath stone, with bricks of various colours. Everything is done without elaboration of moulding or carving, the forms used being of the simplest consistent with architectural effect. The works have been undertaken, at the cost of 3,913*l.*, by Mr. W. Mathews, builder, Birmingham; Mr. J. Cranston, Birmingham, being the architect employed.

Birkenhead.—The new Wesleyan Chapel for Seacombe circuit, in Laird-street, Birkenhead, has been opened for Divine service. The building is a plain structure, in the Decorated style, about 60 feet long by 29 feet wide interior dimensions, and about 35 feet high to the ridge-piece. It is divided into five bays by means of buttresses, and lighted with two-light windows, with trefoil heads, filled in with rough plate-glass. A marigold window fills up the gable over the entrance-door, and the apex is finished with a neat bell-gable: open benches, stained and varnished, fill up the body of the chapel on each side of a central aisle, and will accommodate about 320 persons. The communion platform is protected by a carved Gothic railing, on the one side of which is placed the pulpit of three steps up. Behind is a large hall for Sunday schools, 36 feet by 18 feet, as well as vestry, &c. The school will afford accommodation for about 100 children. An iron railing and low wall form the boundary to the front, with gate pillars and wooden gate in the centre. The Messrs. Hay were the architects employed; and Mr. Westmorland was the contractor for the work. The cost of the chapel, exclusive of the land, which was given by Mr. Jackson, M.P., is about 1,300*l.*

STAINED GLASS.

Oxon Church.—A general wish having been expressed by the friends of the late Dr. Oliver, the physician, to erect an appropriate memorial of him, his friends resolved to fill the three lights at the east end of Oxon Church with stained glass. The east window is of the date of the thirteenth century, consisting of three lancet lights; and the subject illustrated is the cure of the demoniac by Our Lord. The subject is treated in three medallions, one in each light. In the centre light is Our Lord, in his glory, holding in his hand the Cross. In the dexter light is represented the demoniac, naked, having cast off his clothes, cowering at the feet of Christ, who is commanding the evil spirit to leave him. In the sinister light is the young man, clothed, and in his right mind, seated at the feet of Jesus, listening to his words. In a smaller medallion, at the base of the centre light, is St. Michael overcoming the dragon, signifying the triumph of truth. The medallions are surrounded by foliage work, on ruby and blue grounds. The whole is carried out in accordance with the early period of the stonework. The artists were Messrs. Hardman, of Birmingham.

Mottisfont Church (near Southampton).—Two stained-glass windows have just been fixed in this church, which is in the Early English (thirteenth century) style of architecture. The west window is composed of two lancet-shaped lights, surmounted by a quatrefoil tracery, in the centre of which is the emblem of the Trinity, on a floriated cross. In the centre medallion of the south light is the figure of Joshua as a warrior, below which is a medallion representing Joshua commanding the sun and moon to stand still. In the centre medallion of the north light of this window is shown the figure of Dorcas. The mosaic background of this window is composed of ruby and blue, of the scale diaper, on which are set ornamental medallions in addition to the above, the whole being inclosed by a bordering of Early English character. The north transept window is a triplet. In the centre light is a medallion containing an ascending figure, above which is a representation of our Saviour raising the widow's son, also in medallion. The lower medallion contains family arms. The light on the east side represents, in the centre medallion, the figure of Joseph as ruler over Egypt. In the lower medallion the group illustrates Joseph sold by his brethren, and in the upper medallion is represented the meeting of Jacob and Joseph and his brethren. The light on the west side represents, in the centre medallion, the figure of David in youth as a shepherd, in the upper medallion David and Goliah, and in the medallion below David and Jonathan. The whole of the above are upon a deep violet and green, and ruby and blue mosaic background, inclosed by bordering of Early English character. The two windows were executed by Mr. Baillie, of London.

St. Chad's Church, Over (Cheshire).—The east window, which is in the Decorated style, has been fitted with painted glass by Messrs. Ward & Hughes, of London, as a memorial of the late vicar. In the centre of the three principal lights is the subject of "Our Lord Blessing Little Children," on the left-hand side of which is an illustration of our Lord as the "Good Shepherd;" and on the right our Lord is again represented, but as bearing a lamb on His shoulders. The whole of the figures are upon a blue ground, beneath foliated canopies, the coloured foliation being upon a dark grey background, the principal tracery openings being three quatrefoils. The lower two have an angel playing a musical instrument in each, and the one above contains two angels bearing a red cross, surmounted by a celestial crown.

Glasgow Cathedral.—Another addition has been lately made to the decoration of this cathedral. The whole of the windows in Lauder's crypt, which is immediately below the chapterhouse, have been filled with stained glass, all the thirteen windows having been contributed by Mr. James Spens Black, of Craigmaddie. With the exception of the last, which contains the arms of Mr. Black and the dedication, each of the windows contains the representation of an angel supporting, within an oval compartment, one of the sacred emblems, and having below a shield containing the arms of some old Scottish family. The angels are all of the same size, and in like positions, with only minor variations in the faces and arrangements of the drapery, and each is dressed in white robes and with wings of varied colours. The whole is on a *grisaille* ground, drawn in black or white. Mr. Willement, of London, was the artist.

Miscellaneous. — Two stained-glass windows are at present being made at the establishment of Messrs. John Scott & Son, of Carlisle, according to the local *Journal*. One of them is a three-light memorial window for Bombay, and will contain nine illustrations of the life of Christ: the other, the design for which was selected in competition with the various artists throughout the kingdom, is for Dundee. The glass used is Powell's.

SURVEYING AT SEA.

A PARAGRAPH has gone the round of the papers relating to a recent extraordinary transparency of the sea at Deal, the bottom being distinctly visible at a considerable depth. The statement is somewhat suggestive, and I am induced to ask whether some useful purpose might not be served in the examination of sea bottoms for telegraphic and other purposes, by an arrangement which should enable investigators to look straight downwards or diagonally from the interior of a ship, either with or without the aid of telescopic apparatus. A good-sized disc of clear glass might, I imagine, be so fitted and so placed in the ship's hull as to avoid danger of fracture or other risk. With the full glare of mid-day shining on the surface, and the spectator standing in the dark interior of the hull, several feet below the sea-level, the circumstances would be favourable to careful survey over much larger areas than the simple act of sounding affords cognizance of. W. S. M.

EGRESS FROM BUILDINGS.

HAVING read of the great sacrifice of human life in the conflagration at the Catholic Cathedral, in South America, some few months ago, it occurred to me that the following alteration in the door entrance to churches and other large structures would be the means of affording ample egress to hundreds in case of the interior catch-

ig fire. In places erected to accommodate a arge assembly, instead of the old style of door eing the only entrance to the interior, I beg to uggest that there should be a case of wood four imes the size of the door, of a square shape, to un on casters, devised to harmonize with the rchitecture of the outer wall, parted in the iddle, with a door entrance in its centre to pen for ordinary purposes. In case of fire, hen hundreds are assembled, by closing the mall entrance, then pushing the two larger ivisions into the two side spaces in the stone- ork, made wide enough to receive them, an pening one-eighth the size of the outer wall ight be made in five minutes to enable the in- nates to escape, and thus prevent the sacrifice f human life to a great extent.

HAYDN WILSON.

SANITARY ARRANGEMENTS IN INDIA.

THE sanitary arrangements required in tropi- al countries being a subject just now of con- siderable interest, and one upon which I conceive reat misapprehension to prevail, I hope to be xcused for a few remarks.

It is very generally supposed, and now asserted by your correspondent "C. T.," that deficient water supply is the cause of the unsatisfactory state of sanitary works in India and Queensland. Now, with all deference to the opinions of "C. T.," I think, after the following remarks are con- sidered, it will be found that the cause must be sought for in some direction other than in de- ficiency of water supply—at least, for India. Queensland may be, and most probably is, so dry as to seriously obstruct sanitary improve- ments. But with India the case is different.

No wooded country can be without a good water supply in the ground, and the absence of this is probably the cause of the security of timber in some places—parts of South America, for instance. But the rainfall in India is very great at Cherra-ponjee, 592 inches per annum, and in several other places from 150 to 250 inches in the same period. But it is not with these excessive rainfalls that we will now deal. Singapore has a rainfall of 97 inches per year, and Bombay and Calcutta more than 75 inches each. Now suppose two-thirds of this to be carried off by evaporation, there would still remain about 25 inches (equal to the rainfall in the south of France, and slightly greater than that of London, which is about 24·5 inches) per year for the supply of brooks and springs. Perhaps the newly enlisted architects in the Royal Engineers may be able to clear up some points on this subject.

CHARLES S. HILL.

TRANSPARENT GARDEN WALLS.

LIKE most Cockneys, I have a fancy that I appreciate the delights of the garden; but I must own that I am more pleased with a garden as a picturesque appendage to a suburban resi- dence, than as affording space for conducting horticultural operations; and I have always con- sidered the monotonous brick walls, which hem us in so closely, as great drawbacks. It is true these walls may be masked by evergreen shrubs or climbing plants; but these take time to grow so as to cover the walls; and, long before this is effected, one may in these days be called upon to "move on" by some railway requiring the premises, or in order to allow of some metro- politan improvement being effected. In the horticultural point of view, I think it will be obvious that a space not many feet square, sur- rounded by walls, say 6 feet high, is very much deteriorated by such an arrangement; as, on the shady side or end, a shadow is projected on the ground to such an extent that for the greatest part of the day we have much more shade than sunshine in the garden, which is not conducive either to cheerfulness or to good gardening. Now, the remedy for this may be said to be the substitution of open palings or railings for the brick walls: but this has the very great objection, that the privacy of the place is destroyed thereby; and, to an Englishman, the privacy of his homestead is a matter of moment. To devise a plan which should part off one man's premises from another's, in a permanent manner, and yet let in the sunshine, has therefore appeared to me a desideratum; and I have thought that such a plan might be to build a footing or low wall, say 2 feet in height at the maximum, and fix upon it uprights of iron or metal of < shape across, be- tween every two of which thus arranged < > strips of (rough, plate, or ground, or obscured) glass could be fitted; and, when this glass paling, as it might be termed, was required to be of any considerable length, brick piers might be placed between, and the glass paling might be protected on each side by strong wire-work, which could be used as trellis for climbers; but, should the use of so much glass be considered objectionable, perhaps between each glass paling, a paling of galvanized iron, of the same width, might be in- terposed, as the sunshine coming through on each side would leave but small shadows between. As this suggestion, if not quite the practical thing, may be rendered practicable in the hands of some of your able readers, I have ventured to forward it to you.

F. C.

IRON WATER CISTERNS.

HAVING seen the *query* of your correspondent using that pseudonyme and asking one of your readers to inform him "how to calculate the strain upon the sides of a cast-iron cistern of large size,—say 20 feet square and 18 feet deep, —composed of sixteen plates in each side and in the bottom; with the readiest method of obtaining the pressure upon the centre of each plate, the strain upon the tie-rods, &c." I beg to submit the following "rule," divested as much as possible of the "scientific" paraphernalia so unattractive to people who wish for "rules" and do not care about reasons.

When his tank is quite full it will contain $18 \times 20 \times 20 = 7{,}200$ cubic feet. As a cubic foot of water weighs 62·5 lb., there will be an amount of water weighing 440,000 lb.

With a tank of this comparatively small size, there is no necessity to calculate the pressure on each separate plate. We may, therefore, take the entire side.

The pressure P of a fluid against a flat surface is given by the formula Fhy, in which F is the area of the surface; h is the depth of the centre of gravity of the surface from the level of the liquid; and γ is the specific gravity of the liquid. Calling the breadth b, and the depth a of our square sides, the height of water would then be $\frac{a}{2}$. Its pressure, is, therefore, $P = ab \cdot \frac{a}{2}\gamma = \frac{1}{2}a^2 b\gamma$. According to known principles of statics, the centre of pressure on the vertical side is really at a point two-thirds of the whole depth measured from the top level. All this applies to each plate, or to the whole areas of the sixteen plates taken together. But we may very well, practically, reckon it as, in our case, acting at the centre of gravity. We thus have to take one-half the square of the depth of the side in feet, multiplied by the breadth of the side in feet, and by the weight of 1 cubic foot of water. We thus have,— $\frac{1}{2}(18)^2 \cdot 20 \cdot 62{\cdot}5 = 202{,}500$ lb., or nearly $90\frac{1}{4}$ tons. If the tie-rods were not assisted by the joints, each end of each rod would have to sus- tain about one-sixteenth of this pressure,—of course, supposing a tie-rod to each opposite pair of plates. There is an advantage in repairs if the tie-rods, &c., be all made of an equal thick- ness. If the cistern be used for sea-water, it may be noticed that sea-water is a little heavier than common spring-water. Some waters, however, and more especially sea-water, have been found, in some pretty well authenticated instances, to exert powerfully corrosive effects on wrought-iron when in contact with cast-iron. In a number of the *Times* of last year, there is a remarkable account of the destruction of a salt-water cistern in this way. In the north-east portion of Ports- mouth Dock-yard was a large iron salt-water tank, standing on lofty iron columns over some stores of oak planking. It was 160 feet long, 40 feet wide, and 5 feet deep, and it was kept filled with salt-water to assist in quenching any fire which might break out in the neighbourhood. This tank burst and committed great ravages. It was found on examination that about 70 feet of the iron plates forming one side of the tank had given way, and had been pushed with the water into the roadway. The tank was built up of cast-iron flanged plates, fastened together with bolts, nuts, screws, &c., in the usual man- ner. Some of the plates were separated at the fastenings, the nuts having been torn off the screw ends of the bolts by the pressure of the water. In other instances the iron plates have been broken through diagonally, like pottery-ware. The weight of the water in the tank was calculated at 800 tons, and the pressure at the side of the tank which gave way at about 50 tons. "An inspection of the broken parts of the tank disclosed the somewhat extra- ordinary facts that the *wrought-iron* tie-rods in the interior of the tank were very much eaten away at their junction with the cast-iron plates, where they had been submerged in the salt-water." So that the factor of safety by which the strength of the rods was made four times the working load (or half the load due to the elastic limit) was not sufficient in this case, as a chemical force stepped in to the aid of the mechanical pressure.

C. E.

Books Received.

Beeton's Dictionary of Universal Information; comprising the Sciences, Arts, and Literature. London: Beeton.

IT is a pity so excellent a dictionary as this should be somewhat defective in the title. When the first part or volume was issued, the public must have been led naturally by the title to imagine that in it they had a really universal dictionary, whereas it was merely a biographical and geographical dictionary; and so with the present, till looked into, the impression given is a similar one, whereas this volume is limited to science, art, and literature. Now a dictionary comprises *an* alphabetical arrangement running on *once* for all from A to Z; but more than one such arrangement constitutes not a dictionary, but a series of dictionaries, even though there be but two. Had the titles, however, even con- tained but the two words, "part first" and "part second," comprising—so and so, the awk- wardness of the defective title would at least have been mitigated, and the two volumes really shown, on the face of each of them, to be, what the preface, when we come to look into it, tells us they are, "the separate moieties of a com- plete whole,—each being incomplete without its fellow."

The work, as a whole, is a most useful and faithful compilation. The type is small and economical, and the sixteen hundred pages and upwards of the volume under notice constitute in themselves an encyclopædia of no small extent, and contain much important matter not to be had in even the most ponderous of encyclopædias. Of course, the work has defects, as every such work must and will have to the end of time. Into its architectural shortcomings we cannot enter; but we may adduce two or three exam- ples of a miscellaneous nature to show how we think such a work might be here and there im- proved a little, and so made more complete. Thus, under the word "Dagon," we have a brief but good enough condensation of information as to the fish-god, but all "difference of opinion as to the form of this idol" has been set aside by the discovery (not alluded to) of the sculptured form of the fish-god, on the Assyrian slabs, by Mr. Layard. Under the words "Pearl," "Oyster," and "Mussel" (fishy subjects also), no mention is made of the ancient renown of our British coasts for pearls, which were, and still are, found in our oysters, but chiefly, it appears, in our mussels,—as at Portobello, near Edinburgh, and also in the Clyde, at Glasgow. Under the head of "Punctuation," amid matter which is quite free from the absurdities and errors to be found in more pretentious accounts of it, the pauses, which are described merely as "very short" for the comma, "a longer pause" for the semicolon, a "pause still greater" for the colon, and "a full stop" for the point or period, would have been better indicated by a pause counting *one* for the comma, *two* for the semi- colon, *three* for the colon, and *four* for the period, as is done in some of the better trea- tises on punctuation. Under "Uranus," the planet, we are told (wrongly) that this is the most distant of the planets; whereas, the article "Neptune" informs us (rightly) that *it* is the most distant of the known planets.

The work, nevertheless, is a laborious and admirable one, and ought to be in the library of all who desire to have a reliable work of general reference as to matters connected with science, art, and literature.

The Balance Sheets of Insurance Companies. By HENRY AYRES. London: Foss.

THE chief purpose of this pamphlet is to examine "the real advantages of publicity, by reference to the accounts of companies presented to Par- liament in June, 1863." The author points attention to the exclusion of insurance com- panies established previously to 1844 from publi- cation of accounts, and asks whether the time

has not now arrived when the public should be put in possession of information from these offices of a nature that should be a guarantee for the continuance of the confidence they have hitherto enjoyed. The evasion of the law as to publicity by other companies is also brought under notice; as also the very strange and inconsistent manner in which the accounts, where published, have been presented to Parliament, in huge and expensive, as well as useless, blue-books.

Picturesque Garden Plans: a Practical Guide to the Laying out, &c., of Public Gardens, Town Squares, and Open Spaces. By R. SIEBECK, Superintendent of Public Gardens, Vienna. Adapted to English Gardens, &c. by JOSEPH NEWTON, F.R.H.S. Hardwicke, Piccadilly, 1864.

A WORK on this subject by Mr. Joseph Newton, landscape gardener, meets opportunely the requirements of Hortulan Art, at this period of transition in the various styles of laying out grounds. The arrangement is concise and completely descriptive, so that any expert gardener can, by a very short study of the examples set forth, arrange or adorn large or small plots encircling new abodes, on naked down or barren waste. Twenty-four illustrations of a purely English garden character, as published by Professor Siebeck, of Vienna, are given as evidences of good design. These are applicable to larger or smaller compass—from 2 to 10 or more acres; and they are set to four distinct scales of measurement, in English, French, German, and Spanish; having been much used and exemplified on the Continent, but principally in the neighbourhood of Vienna and Paris. Short tables of reference, descriptive of the twenty-four plans, give the names and character of the trees, shrubs, clumps, and flower-knots, each object being marked with a number, which is recorded in the corresponding table, under its botanical designation. Geometrical beds, now so much in vogue, are not excluded; but the obvious characteristic of this simple work is to show the superiority of the old English garden, and the preference which that style has attained to amongst our refined and tasteful neighbours. The treatise guards, at least, against the quadratures and angularities of ancient walled inclosures, and introduces a free style of arrangement, which is more consistent with Nature's spontaneous growth, and admits of scenic embellishment that is far more healthful, consoling, and effective. For the unpractised gardener it offers a guide, and secures, at least, a pleasing *entourage* of graceful and beautiful objects; while upon the tasteful practitioner no restraint is imposed, for he may vary or diversify his nurslings. And now that the wolds near railway stations are being studded with villas, these actuaries of improvements may "make the wilderness blossom as a rose."

VARIORUM.

"THE Action of the Patent Laws in promoting Invention." By C. D. Abel, C.E. (London, Taylor & Francis). In this pamphlet, while the patent system is supported in its general principles, various amendments are suggested, such as an extension of time, and of the use of the patent office, and the establishment of a special tribunal for actions, &c., relating to patent inventions. An exhaustive and important discussion, we may here remark, has been going on in the Society of Arts on the subject of the patent laws, in consequence of the reading of a paper on the subject by Mr. Thomas Webster, F.R.S. There is hardly a single point, either *pro* or *con.*, which was not raised in course of the discussion. The inconveniences of the present patent law system, and the scandalous costs of litigation, were especially complained of.——"Report to the Local Board, Great Crosby District, Liverpool, on the Sewerage of the District and Disposal and Utilization of the Sewage." By Alfred Taylor, C.E. The village of Great Crosby is in a wretched state from want of proper sewers, and we are glad to hear that the local board, on Mr. Taylor's report, have determined to apply to the Home Secretary for power to borrow 9,000*l.* on the security of the rates, for the purpose of carrying out one of the schemes of sewerage reported on by Mr. Taylor. The sewage will be taken to the shore.——*The Social Science Review*, May 2nd, 1864. In this number the paper on the diseases of overworked men is continued; and there are others on ozone, the cure of drunkenness, the relation of crime and insanity, the cabmen of London, &c.

Miscellanea.

RAILWAYS IN DENMARK. — Respecting the construction of a line of railway across the Isle of Funen, the special correspondent of the *Evening Standard* says that, at the present time, owing, as he supposes, to the demand for men for warlike purposes, and the requirements of the tillage season, the nearly-completed works are almost at a standstill. It is impossible to get hands on any terms. The general payment of the Danish navvies is a dollar (2*s.* 3*d.*) a day. The wages are not high, but the contractors complain that the men work lazily and ineffectually. They acknowledge, however, that the men work on the railways as well as for themselves upon their small farms; and that the honesty of every one in this country is a perfect marvel. Nowhere is there more plunder than on a portion of railway under construction; and in England and other countries the contractors are heavily taxed for watchmen, day and night, to look after the loosely-scattered bolts and screws, nails, and pieces of timber. Here, I am told, a single watchman is never employed, and a single nail is never missed in the most crowded districts. Railways are constructed at such a cost as would make dividend-expectants' mouths water in England. In the first place, the line is single. The land is bought cheaply, and there is no tunnelling and little bridging. The sleepers, which look magnificent, come from Norway. The rail seems good and substantial. The stations will be small, and without much decoration, but suitable and convenient. The writer is told that the whole cost will be under 5,000*l.* a mile.

BROCKSBY HALL. — This fine old mansion, situate in the valley of the Wreake, six miles west of Melton Mowbray, and the property of Lord Alfred Paget, is about to undergo restorations and additions, under the superintendence of Mr. R. W. Johnson, architect. The mansion formerly belonged to the Villiers family, from whom sprang George Duke of Buckingham, and a monument occupies the east side of the small church (which is within a stone's throw of the Hall, and with its neat spire forms a picturesque object from the Hall windows), to the memory of Sir W. and Lady Villiers, who were buried here in 1711, and were the last of that celebrated family. The chief feature in the building is its very fine entrance-hall, the decorations of which are of a much later period than the exterior work. The building is of stone, and is surrounded by some fine timber.

YAXLEY CHURCH.—A correspondent of the *Suffolk Chronicle* says that the church of St. Mary is a fine building with square embattled tower and six bells, with nave, south aisle, and Gothic porch; and asks whether Churchmen will suffer this edifice *to fall* to the ground before the parishioners think of its restoration? The cracks in its exterior walls and steeple, he says, are nearly ready to swallow you; most of the stonework of the windows will soon fall out; the church doors are in such bad condition that small birds have free access to the church.

PROVINCIAL NEWSPAPER SOCIETY.—The annual meeting of this society was held at the Crystal Palace, on the 4th instant. It was resolved that a slight memento of the late Mr. Johnson Gedge, of Bury St. Edmund's, who had for years been honorary secretary to the society, should be erected by the society in St. Mary's Church, Bury St. Edmund's. Mr. BAXTER, of the *Sussex Express*, was appointed honorary secretary, and Mr. J. L. Foster, of the *Yorkshire Gazette*, was elected president for the ensuing year, together with other gentlemen connected with the press as vice-presidents.

NEW BORING MACHINE.—A very useful and simple rock-boring machine is stated to have been lately employed at Spezzia, in cutting one of the tunnels between that port and Genoa. It is asserted that it cuts at such a rapid rate that, if employed in the Mont Cenis excavation, the work would be completed in three years instead of eleven, which is at present supposed to be the period which must elapse before it is finished.

VARNISHING OF PICTURES.—A Spanish photographer has discovered a varnish which gives an astonishing brilliancy to the prints to which it is applied. He keeps his invention secret, but the varnish is believed to consist of albumen. M. Matthys has also produced a similar effect by means of a thin coating of collodion.

THE PROPOSED RESTORATION OF WORCESTER CATHEDRAL.—A county meeting, convened by the High Sheriff of Warwickshire, has been held in compliance with an influentially-signed requisition, at the Shirehall, Warwick, for the purpose of raising funds. The Bishop of the diocese occupied the chair, and there were also present Lord Lyttelton, the Lord Lieutenant of Worcestershire; Lord Leigh, the Lord Lieutenant of Warwickshire; and many other influential persons. The Bishop of Worcester explained that the Dean and Chapter of the Cathedral at Worcester had during the last few years expended 30,000*l.* in effecting the restoration of certain dilapidated portions of the building; but, after exhausting the funds at their command, so extensive was the work that still remained to be done that they were compelled to appeal to the public for assistance to enable them to complete the restoration of the edifice. With this object a meeting had recently been held in Worcester, at which 12,000*l.* were liberally subscribed; and if Warwickshire, which formed an integral portion of the diocese, came forward in the same generous spirit there was no doubt that the contemplated work could be satisfactorily completed. Lord Lyttelton explained that the total cost of the alterations and renovations, which would be carried out under the advice and superintendence of Mr. Scott, was estimated at 30,000*l.*, in addition to the 30,000*l.* already expended by the Dean and Chapter. In conclusion, he said that subscriptions might be distributed over a period of four or five years. At the close, and after appropriate resolutions were passed, the Bishop of Worcester said that the result of the meeting was very encouraging and satisfactory. The subscriptions announced from Warwickshire already amounted to 1,100*l.*

AN EXPLOSION WITH BESSEMER IRON APPARATUS.—An explosion, hitherto without example, says the Paris correspondent of the *Birmingham Journal*, has taken place at the ironworks, Tinpley, where Bessemer's apparatus has been employed for years without the smallest accident. In the midst of the fusing operation a tremendous report was heard, and presently a fiery torrent was projected from the mouth of the apparatus with such violence that the whole of the workmen engaged in superintending the operation were more or less injured. One of them was killed on the spot, while several others were lamed for life, and many were conveyed in great agony to the hospital. The cause of the explosion is about to be investigated scientifically, as it is the first example of the kind which has occurred. A report of the occurrence has been sent in to the École Polytechnique, in order that an inquiry may be made.

OPENING OF THE MUSEUM IN QUEEN'S PARK, MANCHESTER.—This museum, which has been in course of formation for the last nine months, has been opened by the mayor and corporation. Leading from the entrance-hall is a large, well-lighted room, 50 feet by 20 feet, which has been appropriated as a picture-gallery. At present there are about sixty pictures and engravings, but room could be made for as many more. The museum gallery and ante-rooms occupy the whole of the second floor. The principal feature in the gallery proper is a large collection of shells and minerals, contained in glass cases. Food materials are well represented in the museum. Another prominent feature is a series of the dye stuffs and materials so important to the manufacturers of Manchester.

BRISTOL FINE ARTS' ACADEMY.—The annual meeting has been held in the Exhibition room, Queen's-road, under the presidency of the Rev. J. Heyworth. There was but a small attendance. The committee's report was read. It stated in respect of last year's exhibition, that although the aggregate amount for pictures sold was nearly 800*l.*, the attendance of the public at the exhibition was so small that the net proceeds amounted only to 24*l.* 19*s.* From the financial statement it appeared that at the commencement of the year, there was a balance against the Institution of 57*l.* 15*s.* 8*d.*, and the total expenditure for the year had been 345*l.* 5*s.* 4*d.*

SPOTTY PAINT.—A subscriber, "E. A.," wishes some other of our correspondents to suggest a remedy for dark spots which appear on external paint over stone, and which have been attributed to salt in stucco, but, as our correspondent thinks, wrongly. These spots he has not seen in paint on wood; otherwise bad oil might be regarded as the cause.

The Park Lane and other Obstructions'—At the usual meeting, last week, of the Metropolitan Board of Works, Mr. Tite stated that a great complaint had been made in the House of Commons with respect to the inconvenience arising from the narrowness of Park-lane, and it had been recommended that this Board should take notice of the matter. The Chairman said that a motion would have to be placed on the agenda paper. Mr. Tite said he would do so. Mr. Nicholay said he should then move that something should be done with regard to Middle-row, Holborn; and Mr. Newton added, that he should bring to the notice of the Board that the long-needed improvement in Commercial-road, East, was still to be done. Mr. Bidgood said he should also propose the carrying out of the improvement in Rupert-street, Haymarket. Other members mentioned places which the Board had promised to improve when it should have the money.

Injury from Hoarding. — In the recent sittings at *Nisi Prius*, before Lord Chief Justice Cockburn and a common jury, the case of Brown v. Duncanson and another was decided. The plaintiff was driving a chaise through Upper Marylebone-street. The defendants were rebuilding in that street, and had put up the usual hoarding. In front of the hoarding there was a raised footway, which had been protected by a hand-rail, but one bar of this rail had been broken down or stolen. Plaintiff drove against the raised footway, and was thrown out of the vehicle, and injured. After the accident, the hand-rail was repaired and whitened, so as to be more distinctly seen. The defence was, that the hoarding was sufficiently well lighted, and that plaintiff by ordinary care might have avoided the accident. The jury found a verdict for the plaintiff—Damages, 25*l*.

Accidents.—A tall chimney in course of formation at Frizelnd, Saddleworth, in Lancashire, and belonging to Messrs. R. & R. Whitehead, of the Royal George Mills, has fallen, killing nine persons and injuring others. The new chimney was to be 50 yards in height, and was being built by Mr. John Jackson, of Grasscroft. About 20 yards of it had been built when one side of its foundations gave way, and it swerved, but was restored to the perpendicular, and was in further progress when it again gave way, and fell to the ground, destroying several houses, the inmates of which had no warning, although the chimney had been watched and was seen to settle over before it fell.——At Wolverhampton, the upper story of a malt-house has fallen in, while 500 bags of barley were on the floor: the building was an old one. —— At Hulme, a scaffold at a building in Upper Medlock-street has fallen, and so injured a plasterer that he has since died. The decease had misgivings as to the strength of the scaffold, and had loaded it with additional planks, which are thought to have brought it down.

New Theatre in Greenwich.—On Saturday, at a meeting of Kent county magistrates, application was made on behalf of Mr. Sefton Parry, of the Princess's Theatre, for a licence for a newly-erected theatre in the town of Greenwich, contiguous to the railway station. Mr. Parry stated that all modern improvements had been observed in the construction of the building, and that ample means of egress existed in the event of fire: the whole of the doors in the interior of the building opened outwards. The precautions suggested by the Lord Chamberlain for the protection of lights, both for the safety of the actors and the public, had been adopted. The magistrates, after a short consultation, agreed to grant the licence.

Engineer to Ipswich Dock Commission.—Mr. Edward Rush Turner, of the Ipswich engineering firm of that name, has been appointed engineer to the local Dock Commission. Mr. Wilkins was also a candidate. The votes were 42 for Mr. Turner and 15 for Mr. Wilkins.

The Holborn Valley Improvement Bill.—This bill has passed the Committee of the Lords, after meeting with opposition from the firms of Pontifex, engineers, and Meeking, drapers, and others, including two gas companies and the Holborn District Board of Works.

Industrial Exhibition for the Northern Suburbs of London.—It has been resolved to hold an industrial exhibition at the Amwell-street school-rooms, on the first two weeks in August. The exhibition will be as much as possible a workman's one.

The Proposed Shakspeare Memorial Building at Sunderland.—The project to erect a Shakspeare commemoration building at Sunderland, set a-foot by the offer of Ald. Candlish to contribute £500, has been revived by an offer made by Ald. Hartley to contribute one-sixth of £2,000, if five others will join him in making up the sum named. If £2,500 could be raised in this manner, the project would doubtless be realized in a very handsome way, as a display of liberality like this on the part of the chief men of the borough would induce the general public to subscribe liberally. It is intended that the building should include accommodation for the museum, and form a basis for the re-construction of the free library.

The Public Works Act and Manchester Cemetery.—At the Manchester City Council it was reported that the Cemetery Sub-Committee had concluded contracts for the expenditure of 14,000*l*. on the new cemetery, by which they will be enabled to give employment to factory operatives now out of work. At least one-half of this amount will be spent in unskilled labour, and the operatives will receive fair wages, as an engagement has been entered into by the contractor, Mr. Thornton, to employ all the corporation send at a fixed rate of wages. There are very few unemployed cotton-spinners, however, now at Manchester. The cemetery works are already laid out, and a commencement has been made.

Conference of Working Men's Clubs.—A conference has been held at the Whittington Club on working men's clubs, under the auspices of the Working Men's Club Union. There was a large sprinkling of gentlemen interested in working men's clubs, as the Bishop of London, the Earl of Lichfield, Admiral the Hon. Sir F. Grey, Lord Lyttelton, Viscount Ingestre, Mr. Thomas Hughes, Dr. Bowkett, and others. On one of the evenings of the conference a conversazione was held in the large hall of the club. A resolution, moved by Mr. Hughes, was passed, to the effect that a special effort be made to raise a sum of 500*l*. a year, in addition to the present income of the society, for at least three years.

A Fever Manufactory in Southwark.—Mr. William Hale, the owner of extensive premises in the "Grove," Great Guildford-street, Southwark, was summoned before Mr. Woolrych, at the Southwark Police Court, under the Nuisances Removal Act, for unlawfully carrying on a manufactory causing filthy effluvia injurious to the health of the inhabitants of the neighbourhood; when it was proved that the defendant had been carrying on a very disgusting manure manufactory, and that a fatal low fever existed in the locality. For the defendant it was stated that his men were about removing the materials to *premises he had taken near Belle Isle, King's-cross*. Mr. Woolrych made an order for the removal of the nuisance within a fortnight, under penalties.

Opening of the new Reservoir at Nottingham.—This new structure covers an area of an acre and a half, being three times the size of the old one, of which in conformation it is an exact duplicate. There are twelve chambers, large and roomy, and 12 feet in height. The reservoir is in length 220 feet, and in width 133 feet, and it is calculated that it will hold about two and a half million gallons of water. Mr. Hawksley was the engineer, and the contractors for the building were Messrs. Loverseed & Slim. The walls of the reservoir are built of Mapperley Hill bricks.

The Grotesque in Sculpture.—A humorous model for a fountain statue has been designed by a Hanoverian sculptor, Herr Rosenthal, representing a monkey holding a champagne bottle, of which he has imprudently drawn the cork with his teeth, and the contents of which he vainly endeavours to stop with his fingers. The champagne is represented by the different rays of the fountain bursting out in all directions.

The Franco-Spanish Exhibition.—The *Messager de Bayonne* states that the Franco-Spanish Exhibition about to be held at that town meets with such extensive support, that its success is likely to surpass all expectation.

Bristol Society of Architects.—At a meeting of the Society of Architects on Wednesday, the 4th instant, Mr. Fripp gave a lecture on "Door and Window Openings."

Slates.—As an instance of the development of the slate-quarries in Wales, it has been mentioned that 76,000 tons of slates were shipped from Portmadoc in 1863, against about 10,000 tons in the year 1834. This is from the district known as the Vale of Festiniog alone, and the shipments from Bangor and Carnarvon have increased in almost an equal ratio. The demand is so brisk at present for good slate that buyers have, as a rule, to wait about twelve months before their orders are executed. Many new companies have been promoted with the view of opening fresh ground, but at least three-fourths of the schemes have collapsed, owing to bad management, faults in the rock, or some other unfortunate cause. Some of our correspondents are calling out for slates of contrastive colours that are durable. It is stated that in Scotland, for example, Bangor, and Westmoreland green slates decay in the course of four or five years.

Chimneys.—According to the Earl of Shaftesbury's Bill before the House of Lords, when a chimney is built or rebuilt notice is to be given to the Board of Health or other local authority, and clauses are inserted in this Bill for securing that this authority shall ascertain that the rules laid down in the Act of 1840 are observed. The builder or owner is to pay to the surveyor, or other proper officer of the local authority, a fee not exceeding 5s. for inspection of the chimney or chimneys. An offender may be summoned before a magistrate, who will order the requisitions of the Act to be complied with under a penalty not exceeding 20*l*. a day.

To Purify Infectious Air. — At the late meeting of the British Scientific Association at Newcastle, Dr. Richardson said the best way to destroy organic poison in rooms was to place iodine in a small box with a perforated lid. During the epidemic of the small-pox in London, he had seen this used with great benefit. Though not so powerful as chlorine or bromine, we may remark, iodine is less offensive and not quite so injurious to gilding or other metal work. Dr. Murray Thompson said charcoal was now used in the hospitals in India with beneficial effect. It was hung up in bags from the rafters.

Church Extension in Leeds. — A meeting has been held in the Town-hall, Leeds, for the purpose of establishing a society in Leeds, the objects of which shall be:—1. The increase of the incomes of existing small incumbencies; 2. The sub-division of populous districts, and the establishing of additional incumbents to take charge of new districts; 3. The erection gradually of new churches. A subscription list of 25,275*l*. was read at the meeting. The list was chiefly made up of sums ranging from 5,000*l*., given by Mr. Gott, and a number of 1,000*l*. subscriptions, down to sums of 100*l*. each.

Preserving Wood by Salt.—J. B. Simons, of Brush Valley, Indiana, thus writes to the *Scientific American*:—"I have used common salt for the preservation of mill-shafts or water-wheel shafts, and it has had a good effect in staying the decayed timber. Take a 2-inch auger, bore holes into the stick of timber, and fill up with salt, and then plug up the holes tight. In a large stick of timber, like a water-wheel shaft, bore a hole through the centre, like a pump, and fill up with salt, and plug up; and there is no telling how long this may last, as it has been tried with us, and has answered very well."

Glass Manufacture.—A company of Boston capitalists are erecting a building in South Boston for the extensive manufacture of plate glass. The sand to be used in the manufacture is to be brought from Berkshire county, and 400 workmen are expected over from England in a few days.—*Boston (U.S.) paper.*

Female School of Art.—A fête and bazaar will be held in the Royal Horticultural Gardens, in aid of the building fund of the Female School of Art, Queen's-square, on the 23rd of June next; and we understand that H.R.H. the Princess of Wales will open the proceedings.

Berwick Walls.—Early on Wednesday morning a large portion of the outer, or, as it is called, the Old Berwick wall, which overhangs the river bank at the New-road, fell almost in a solid mass.

Fall of Iron Roof in Portugal.—The iron roof of the new railway station in course of erection at Staapolonia, Portugal, has given way, killing several persons and wounding others.

ST. CROSS HOSPITAL, WINCHESTER.—The contractors for the restoration of a portion of the chancel of the church of this hospital have commenced the works, and have removed the ancient oak stalls supposed to be of the time of Henry the Seventh, and bearing some curious inscriptions. Behind these were discovered some wall paintings, one of which it is supposed represents the Virgin Mary and St. Anne. Another is a female with the emblems of sovereignty, and dressed in the style of the reign of Edward I. Mr. F. Baigent, the local antiquary, is engaged in uncovering, examining, and making drawings of these ancient mural paintings.

MONUMENTAL.—A meeting of the subscribers to the memorial of the late Rev. T. James was held at the rooms of the Architectural Society, in Northampton, on Saturday last, the Rev. Lord Alwyne Compton, in the chair, when it was resolved that the memorial should consist of a font and cover for St. Sepulchre's Church, and that application be immediately made to Mr. G. G. Scott, R.A., to furnish a design for the proposed memorial.

CAN A WORKMAN CLAIM FOR HOLIDAYS.—At the Wolverhampton County Court, a brass furniture forger sued his master, Mr. Thurstans, for 13s. 6d., as three days' wages for the first three days in Easter week. Mr. J. F. Thurstans appeared for the defendant, and showed that the men all ceased work at their own choice. The judge decided for the defendant, but directed that the plaintiff should be paid back his court fees, in order that he might not be the loser by bringing the case into court. He observed that it should be distinctly put into the agreement in these cases whether the holidays would be paid for or not, as it was a matter of great importance to both masters and men.

TENDERS.

For alterations to the following City Schools, Norwich. Mr. J. H. Brown, architect:—

	Fittings.	Total.
St. Paul's School.		
Howard	£306 0 0	£37 15 0	£343 15 0
Whiting	298 17 6	—	—
Atkins	269 0 0	32 0 0	301 14 0
Lacey	—	—	298 0 0
Burrell (accepted)	227 0 0	25 0 0	252 0 0
St. Augustine's.			
Lacey	£282 0 0		
Worman	277 15 0		
Hood & Son	271 10 0		
Gilbert (accepted)	267 0 0		

Accepted for villa in Sowerby. Mr. W. A. Bourne, architect:—

Fawcetts (bricklayer and mason)	£321 10 0
Wild (carpenter and joiner)	289 1 4
Hudson (plumber and glazier)	94 0 0
Fryer (bells)	6 15 0
Fawcetts (plasterer)	60 10 0
Hauxwell (painter)	20 2 2
Kellett (slater)	34 10 6

Accepted for villa in Lancaster-crescent, Sowerby. Mr. W. A. Bourne, architect:—

Wright & Son (bricklayer and mason)	£436 1 0
Ruecroft (carpenter and joiner)	369 10 0
Amos (plumber and glazier)	97 0 0
Fryer (bells)	7 16 0
Amos (gas-fitter)	3 10 6
Rawlins (plasterer)	85 0 0
Kellett (slater)	43 12 6
Bickers (painter)	21 0 0

For alterations at 213, High-street, Camden Town, for Mr. Archer, jun. Mr. D. Gylby, architect:—

Scrivener & White	£209 0 0
Woolnough	189 0 0
Stableford	185 0 0
Dawe	175 0 0

For a house at Sydenham-hill, for Mr. R. P. Harding. Mr. George Truefitt, architect:—

Stimpson (accepted)	£1,676 14 0

For new shops, warehouses, &c., Northampton, for Messrs. Phipps & Son. Messrs. E. F. Law & Sons, architects:—

Dunkley	£4,700 0 0
Watkin	4,500 0 0
Ireson	4,240 0 0
Cosford (accepted)	3,990 0 0

For bricklayers', carpenters', plasterers', and slaters' work to pair of villas, Kendrick-road, Reading. Quantities supplied. Messrs. Cooper & Gouldin, architects:—

Matthews	£945 0 0
Simonds	830 10 0
Dunn	824 6 0

For houses in King-street, Battersea, for Mr. Hunt. Mr. Charles Bowes, architect:—

Bass	£325 0 0
Lathey, Brothers	317 0 0
Thornton	310 0 0

For Scarborough Congregational Church. Messrs. Lockwood & Mawson, architects. Quantities supplied by Mr. Brown, of Westminster:—

Barry (accepted)	£7,850 0 0

For two semi-detached residences in Bridge-road West, Battersea, for Mr. Bennett. Mr. C. Bowes, architect:—

Godbolt	£1,150 0 0
Lathey, Brothers	1,093 0 0
Thornton	1,065 0 0
Parsons	963 0 0

For residence at Esher, Surrey, for Mr. J. J. Clifford. Messrs. Hold & Hughes, architects. Quantities not supplied:—

Hayward	£1,018 0 0
Fish	996 0 0
Matthews	849 0 0
Saunders	775 0 0

For erecting two cottages at Buckhurst Hill, Essex. Mr. J. Tanner, architect:—

Case	£797 0 0
Turner & Son	773 0 0
Eaton & Chapman	703 0 0
Elston	675 0 0

For building a Wesleyan Chapel, with basement class and school-rooms, Leighton Buzzard. Messrs. Bellamy & Hardy, architects:—

Twelvetrees	£3,400 0 0
Simms & Marten	3,290 0 0
Kimberley	3,210 0 0
Ayre & Dunham	3,195 0 0
Young	3,050 0 0
Holdstock & Edwards	2,961 0 0
Hobson & Taylor (accepted)	2,837 0 0

For addition to Beaufort Lodge, for Mr. T. Vaughan Morgan. Mr. C. W. Eppy, architect:—

Higgs	980 0 0
Rudkin	875 0 0
Godbolt	795 0 0
Humbry	715 0 0

For the Brighton Club and Norfolk Hotel Company. Additions to Norfolk Hotel, Contract No. 1. Mr. H. N. Goulty, architect. Quantities supplied:—

Fabian	£8,248 0 0
Patching & Son	8,111 0 0
Patman & Fotheringham	7,887 0 0
Sawyer	7,723 0 0
Chappell	6,932 0 0
Reynolds (accepted)	6,825 0 0

For church at East Barnet. Mr. E. Christian, architect:—

Myers	£3,661 0 0
Piper & Wheeler	3,447 0 0
Macers	3,150 0 0
Jackson & Shawe	3,098 0 0
Sharpington & Cole	3,006 0 0
Dove, Brothers	2,815 0 0

For the erection of a warehouse in Southwark-street, for Mr. B. Meyers. Messrs. Tillot & Chamberlain, architects. Quantities supplied:—

Cannon	£8,900 0 0
Brass	8,768 0 0
Ashby & Sons	8,705 0 0
Lawrence & Sons	8,682 0 0
Patrick & Son	8,625 0 0
Myers & Sons	8,426 0 0
Piper & Wheeler	8,205 0 0
Hill & Keddell	8,070 0 0

For the erection of four villa residences on the Royal Hotel Estate, Ventnor, for Mr. B. Meyers. Mr. N. S. Joseph, architect. Quantities supplied by Mr. F. Newman:—

Langdon (accepted)	£1,477 0 0

For Thorpe Church, Norfolk. Mr. T. Jeckell, architect:—

	Brick Vaulting.	Timber Roof.
Baldwin & Burrell	£4,288 0 0	£3,714 0 0
Lloyd	4,150 8 0	3,970 0 0
Worman	4,064 0 0	3,638 0 0
Cornish	3,900 0 0	3,423 0 0
Balls	3,696 0 0	3,445 14 0

For erecting new school buildings in rear of Baptist Chapel, Walworth-road:—

	For Main Building.	Extra if Bath stone dressings.	Extra if room is plastered.
Sawyer	£1,953 0 0	£40 0 0	£70 0 0
Tarrant	1,868 0 0	83 10 0	59 0 0
Howard	1,854 0 0	25 0 0	56 0 0
Wells	1,813 0 0	20 0 0	58 0 0
Thompson	1,770 0 0	50 0 0	60 0 0
Downs	1,693 0 0	105 0 0	55 0 0
Henshaw	1,679 10 0	75 0 0	55 10 0
Sharpington & Cole*	1,733 0 0	18 0 0	50 0 0

* Accepted.

For the erection of warehouse in Tower-street, for Mr. W. Haynes. Mr. Chatfield Clarke, architect:—

Brass	£2,263 0 0
Hack	2,245 0 0
Smith	2,174 0 0
Conder	2,166 0 0
Hardiman & Sandon	2,154 0 0
Patman & Co.	2,151 0 0
Scrivener & Co.	2,097 0 0
Sharpington	2,057 0 0
Anley	2,020 0 0

For the restoration of the ancient Banqueting Hall, Mayfield, near Tunbridge Wells, for Mrs. Connolly. Mr. E. Welby Pugin, architect:—

Smith & Son, including 1,400*l.* for tower	£5,980 0 0
Wilson, excluding tower (accepted)	3,300 0 0

For parish church, Kingsdown, for the Right Hon. Lord Kingsdown. Mr. E. Welby Pugin, architect:—

Smith & Son (accepted)	£1,370 0 0

Exclusive of materials of old building.

For erecting a detached house in Lordship-road, Stoke Newington, for Mr. Wm. Bartlett. Mr. F. G. Widdows, architect:—

Cushing	£1,230 0 0
Green	1,137 0 0
Flint (accepted)	1,080 0 0

The Tenders submitted by Messrs. Key & Sons (carpenters and joiners), Mr. James Wade (bricklayer, &c.), Mr. J. H. Wilson (painter and decorator), have been accepted for the alterations, &c. to St. Andrew's Presbyterian Church, Stockton-on-Tees. Mr. C. J. Adams, architect.

TO CORRESPONDENTS.

SECRETARY (pro tem.)
A. PLATT, Esq.

TEMPORARY OFFICES:—160, GRESHAM HOUSE, OLD BROAD STREET.

PROSPECTUS.

THIS Company is formed for the purpose of purchasing and developing certain new and valuable Patents for Improvements in the Drawing and Shaping of Metals, and for the Machinery employed therein. By this process Metal Tubes can be produced from the fineness of a needle to the size required for the largest ordnance, and its products may be applied to numberless other uses, with infinitely increased strength and diminished cost.

It is applicable, with great advantage, to the manufacture of tubes of all kinds, in every description of Metal, and especially to

Iron or Steel Barrels for Small Arms;
Iron or Steel Tubes for Ordnance;
Hollow Piston-rods, Axles, and Shafting;
Tubes for Boilers and Surface Condensers;
Iron, Lead, and Tin Gas-tubing; &c.

The Reports of the Proving of Gun Barrels are annexed to the Prospectus, showing not only the merit of this application and the surprising results obtained, but in order to afford some measure of its value when applied to the construction of Cannon. It is the unanimous opinion of scientific gentlemen who have examined this method of manufacture, that, by its means the problem will be solved of obtaining lightness combined with great strength; for, of the gun-barrels subjected to trial at the proving-houses of London, Birmingham, and Paris, those intended to be burst only yielded under tests of the most unexampled severity, and invariably bulged before bursting. Large guns, built up of a series of tubes thus produced, welded together cold and rifled by pressure, the skin of the metal being thus preserved intact, will possess all those elements of strength hitherto unattainable, and which artillerists have vainly desired.

The Patent has been experimentally worked in Paris for nearly two years, where large orders are now in hand for gun and rifle barrels. The Ordnance Department of France having caused this process to be examined and reported upon with satisfactory results, negotiations are at present on foot for the supply of the Imperial Government.

It is intended to supply Machinery and to grant Licences to Manufacturers, on terms which shall conciliate existing interests, and to establish a factory for the manufacture of tubes. It may be stated as an example of the prospects of the undertaking, that steel rifle barrels can be produced independently of skilled labour, sold at the present price of iron ones, leaving a large profit to the Company.

The Patentees, in order to afford those interested a means of testing the commercial value of their mode of manufacture, have erected a powerful Hydraulic Draw Bench, of 600 tons pressure, at temporary works in London, 67, Willow-walk, Bermondsey, where it has been seen in operation, in consequence of which applications have been received for Licences and Machinery, and from these sources alone a large annual income cannot fail to be derived.

The Patentees agree to assign their interests in the patents and any improvements for the United Kingdom and Colonies, for the sum of 10,000*l.* and One-Fifth of the Share Capital of the Company, in paid-up shares, which they engage to hold for three years, such shares to participate in dividend only after Eight per cent. profits are declared on the ordinary shares, and then taking any surplus up to 10 per cent.; after which, they will divide *pro rata* with the ordinary share. When sufficient profits have been realized to pay three dividends averaging 10 per cent. per annum, such shares to rank and be transferable as ordinary paid-up shares of the Company. It is further agreed, if required, that one of the Patentees shall remain as Managing Director of the Company for the first year at least.

Samples of the manufacture can be seen at the Company's Offices; and, amongst them, a ¾-inch Drawn Steel Tube, 30 feet long, without join or weld; and pieces of Hollow Cast Steel Wire, cut off a length of 50 feet. Cards to view the machine in operation can be obtained on application to the Secretary.

Applications for Shares must be made in the accompanying form, either to the Secretary, or the Brokers of the Company.

FORM OF APPLICATION FOR SHARES.

(TO BE RETAINED BY THE BANKERS.)

TO THE DIRECTORS OF THE HYDRAULIC TUBE DRAWING AND STEEL ORDNANCE COMPANY (LIMITED).

GENTLEMEN,

Having paid to your Bankers the sum of £..... I hereby request that you will allot me ..... Shares in THE HYDRAULIC TUBE DRAWING AND STEEL ORDNANCE COMPANY (LIMITED); and I hereby agree to accept such Shares, or any less number that may be allotted to me, and pay such Calls as may from time to time be made upon them; and I agree to become a Member of the Company, and to sign the Articles of Association if and when required by you: and I request you to place my name upon the Register of Members in respect of the Shares so allotted.

Name in full .....
Profession or occupation .....
Residence in full .....
Date .....

FROM "THE TIMES," FEBRUARY 25th, 1864.

DRAWN STEEL TUBES.

"Steel Tubes are one of the difficult problems of our hardware manufacture. They are very costly to produce, and very unequal in their tenacity when they are turned out, the weld, when the tube is joined down the middle, always proving its weakest and almost its unsafe part. Steel wires, however, of any thickness or of any fineness, are drawn every day, and by a very simple development of the same process, a machine has been invented, by which steel tubes of any thickness or internal diameter can be produced with the same certainty. In a few words, it may be said that the new method consists of substituting the slow, equal, but irresistible force of hydraulic pressure for the ordinarily rapid but somewhat uncertain steam power of the wire drawer's bench. The whole machinery consists of a hydraulic press, with double cylinders placed vis-à-vis, with a single piston, which, as it leaves one cylinder enters the other, and which, at its junction between the two, carries a powerful collar or flange of iron. To this flange the steel tube to be drawn out is secured in a die or gauge of the requisite shape, while down inside the tube itself passes a steel rod, which fits into the circle of the die or gauge, just allowing the requisite aperture round its circumference to regulate the size of the tube drawn over it. Thus, when once the machine is set in motion by its pump, the tube, held by its outer collar, is slowly drawn over the inner rod, which, according to its thickness, reduces the tube by pressure against the outer die to any fineness, and therefore to any length that may be required. Several tubes were thus drawn yesterday, in the presence of a number of engineers and scientific gentlemen, at Mr. Almond's Works, Willow Walk, Bermondsey, and the results, both as to the mechanical trueness of the tube, and its perfect homogeneousness throughout, were in the very highest degree satisfactory. Nor is it circular tubes only that can be drawn by this process. By altering the shape of the outer die and inner rod, to square, triangular, or octagon, the same form of tube is produced, with equal certainty and equal strength, though, in order to avoid distressing the metal, it is only reduced 1-48th of an inch at each passage through the machine. The movement is so slow that the tube comes out almost cold, yet burnished like the finest steel inside and out. The great pressure, however, to which it is subjected, has a tendency to harden the metal, so that when many reductions of size are necessary, it has to undergo annealing to keep it at the required toughness. After being drawn to whatever shape or length is required, the finished tube can be tempered up to any degree of hardness, or annealed down to its strongest stage of toughness as may be wanted. The whole process is neither an invention nor a discovery, but simply a most valuable development of our present means of manufacture, and one which we think will prove as lucrative to its patentees as it will undoubtedly be most useful to our steel producing districts. Just now, however, when our improvements in artillery have taken us to a point at which wrought iron can help us no further, and when all inventors are looking for a steel lining to their guns, this new process is likely to be regarded with unusual interest.

If, as the patentees claim, their processcan draw homogeneous steel tubes of 8 inches and 10 inches diameter, the long vexed question of trying to make wrought-iron guns to stand their rifling would appear to be near its settlement. The perfect ease and immense strength with which the common rifled and fowling pieces can be lined with steel tubing is shown at the Works at Bermondsey. What a boon a fine steel lining would be to the weapons of the Volunteers, armed as they now are with the Enfield, so soft in its barrel that nothing but the most careful handling can keep it from dent, and fatal injury to its efficacy as a true long-range rifle. The patentees of the machine intend putting up at once a press and dies by which taper steel barrels for the Enfield rifle can be drawn in one place. More, however, is to be gained by drawing steel tubes for the artillery, though neither guns nor rifles open up such a field of profit as is likely to be found in the everyday mercantile wants of Sheffield and Birmingham. Steel tubes, badly and expensively as they are now made, are still an everyday want in the hardware districts; and it is only their cost, and the uncertainty of their production, which puts a tolerable limit to their use. If by this process they can be produced of more than double the strength of the present steel tubes, and at the same price as the most common cast-iron gas piping, their uses in manufacture would seem to be almost endless. For tubing to boilers alone there is enough work to be done to keep all the hydraulic machinery in England, if fitted up to draw steel tubes, going for the next twelve months."

MESSRS. LAKE & HOPKINSON, ARCHITECTS and CONSULTING SURVEYORS.
Quantities of Artificers' Work accurately taken.
Office, No. 1, ADELAIDE PLACE, LONDON BRIDGE, E.C.

PERSPECTIVES, GEOMETRICAL and other DRAWINGS,
MADE and COLOURED by the Advertiser, from rough Sketches or otherwise.
ADDRESS, C 70, CAMBERWELL NEW-ROAD, S.

MR. YATES FREEBODY, C.E.
acts as ARBITRATOR or REFEREE,
as to WORKS, BUILDINGS, GAS, WATER-SUPPLY, &c.
Address, 235, Hackney-road, London, N.E.

BUILDERS' BOOKS in ARREAR expeditiously ENTERED UP by an experienced Builders' Bookkeeper, or RE-ARRANGED on a systematic principle. Terms moderate, and by contract if desired.—Address, W. T. 37, Nelson-terrace, Stoke Newington-road, N.E.

IRON CONSTRUCTION.—ASSISTANCE given on the drawings, specifications, or quantities, of any description of difficult constructive detail, but especially Ironwork, by a gentleman of well-known ability and experience.—Address, O. O. C. Office of "The Builder."

PARTNERSHIP.—An ARCHITECT and SURVEYOR, well connected, and 31 years of age, is desirous of ENTERING an Office, either in town or country (the latter preferred), where, for a consideration he would be admitted a partner at an early period.—Address, E T Office of "The Builder."

PARTNER WANTED, to take the place of a Junior Partner, recently deceased, in a well-known MANUFACTURING BUSINESS, in London, in profitable operation for the last twenty seven years. Capital required, £2000.—Address, B. W. care of Mr. Linton, "Engineer" Office, 163, Strand.

TO PARENTS AND GUARDIANS.
A FELLOW of the ROYAL INSTITUTE of BRITISH ARCHITECTS, residing in a rapidly-increasing town, and enjoying an extensive practice in public and private works, has a VACANCY in his Office for an Out-door PUPIL. For one anxious to get on this is a highly favourable opening.—Address, F. D. Office of "The Builder."

AN ARCHITECT and SURVEYOR, in large practice, has VACANCIES in his Office for ONE or TWO out-door PUPILS, on moderate terms. Practical instruction guaranteed.—S. R. Mr. Doughtey's Newspaper Office, Young-street, Kensington, W.

DISTRICT of LITTLEHAMPTON.—SURVEYOR WANTED.—The Local Board of Health for the District of Littlehampton are desirous of Appointing a SURVEYOR. He must be competent to prepare plans, drawings, estimates, and specifications of all works connected with the sewerage and drainage, as well as of the metalling, paving, and repairs of the streets, together with the public lighting and cleansing of the district, and to superintend such works. He must be able to test the materials required, and see to the fulfilment of the conditions of the contracts for executing the above or similar works. He will be required to report upon all newly-projected streets and new buildings within the district, with as to their drainage and conveniences, and generally as to their conformity to the by-laws and building regulations of the Board. He will also have to report and advise upon all nuisance cases involving structural alterations necessary for their abatement; to keep proper accounts connected with the departments of labour and materials; to attend the meetings of the Local Board and their Committees; and to carry out such orders as they may from time to time direct in connexion with his office. Candidates are requested to forward their applications, and testimonials, stating salary required, marked "Appointment of Surveyor," to the Clerk of the Local Board (from whom further information may be obtained) on or before TUESDAY, the 31st day of MAY instant. The Board will not bind themselves to accept the lowest or any Tender.
ROBERT FRENCH, Clerk to the Local Board of Health.
Littlehampton, May 16, 1864.

Crucible and Cement Clay, Wholesale and for Exportation.
EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS.
N.B. These goods are supplied to the largest Steel Smelting, Armour Plate, and Crucible Works in the World, to which references can be given on application.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

BRICKS, PANTILES, AND PAVINGS.

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Offices of
Messrs. PINDER, SIMPSON & SONS, 29, New Bridge, London, and at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect colite) is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to take a bed-wise. It works freely with a tooth saw, and wrought at a cheaper rate than any stone in the kingdom.

The above WEATHER STONE
is 1s. 9d. per cubic foot, delivered in London.

ABERDEEN POLISHED GRANITE WORKS. Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862.
Red, Blue, and Grey Granite for every description of architectural construction, decoration, memorials, and general purposes.
Apply to ALEX. MACDONALD, FIELD, & CO. Aberdeen; and at London Depôt, 404, Euston-road, N.W.—DAVID WILLET, Agent.

ROBERT WHITE, SLATE MERCHANT, SHEFFIELD.
ROOFING SLATES, CISTERNS, and SLABS supplied in quantities of not less than five tons, from the Depots, Bangor Mold Junction and Garston.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, del vered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks, Lime, and Old Bricks. Dry Rubbish delivered per cart, in any quantity alongside the Thames.

FIRST-RATE SITES of FREEHOLD BUILDING LAND TO BE LET, on the usual terms at Lower Norwood, close to the station; at Teddington, very near the station; and at Putney, &c. Greenbury, &c.—Apply to Mr. EDMESTON, Architect and Surveyor, 5, Crown-court, Old Broad-street, E.C.

BUILDING GROUND.—TO BE LET, from Michaelmas next, a valuable PLOT of GROUND, adjoining the Lea Bridge Railway Station, with a frontage of 300 feet to the Lea Bridge road, the total area being 3a. 2r. 36p.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

HOUSE.—WANTED to PURCHASE, within a short distance of the Camden-road Station, a small and convenient HOUSE, without underground rooms.—Full particulars to M. L. 13, Hadley street North, Kentish Town, N.W.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views.—Apply to A. B. 196, Bermondsey-street, S.E.

FIRST-FLOOR OFFICES to LET, in the STRAND, near to Somerset House. Private entrance, and to a quiet respectable tenant, very moderate rent.—Apply at No. 85c, Strand

CITY of LONDON.—FORE STREET and CRIPPLEGATE BUILDINGS.—Valuable PROPERTY TO BE LET by TENDER, on a long Lease or Leases, for rebuilding or other improvements, subject to convenient unexpired terms; comprising Shops in Fore-street, Nos. 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, and 22; in Cripplegate-buildings, Nos. 6, 7, 8, 9, and 10, being the Cripplegate Tavern; also the premises known as the White Horse and, occupied by Mrs. Scholes. The frontage in Fore-street is 221 feet 8 inches; all Cripplegate Buildings, 109 feet 6 inches. The whole comprises more than half an acre, being about 24,000 square feet. Possession of a small portion can be given at Midsummer, 1864; of the larger portion at Michaelmas, 1865; and of Nos. 12, 13, 14, 15, and 22, Fore street, in 1871, and of the Cripplegate premises when the present tenancy may be terminated. The whole or in part, to the views of the purchasers. The locality will be benefited by the Metropolitan Railway, and by the widening of Moorgate-street. Plans, particulars, and conditions of sale may be had at the Auction Mart; and of Messrs. Lewis & Lewis, Solicitors, 3, Bedford-row, W.C.

BUILDING GROUND WANTED, to Buy or Rent, by a Builder who has lately finished a street of large houses. Prefers old fresh land in London, or the immediate outskirts western.—Address, V. Y. 2 Mr. Coles, Stationer, Norfolk-terrace, Bayswater, W.

TO STONE MERCHANTS.—WHARF, at PIMLICO.—TO BE LET or SOLD, a WHARF, in Upper Ebury, with the Offices, Crane, and Land fenced in with folding gates. Lease, 50 years.—Apply to PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, Westminster

DARTFORD, KENT.—FOR SALE, Valuable FREEHOLD BUILDING LAND, in plots of 50 feet frontage and upwards, at Dartford New Town, about half a mile from the railway station.—For particulars, apply to A. RUSSELL, Esq. Solicitor, Dartford, Kent; or to Messrs. COBB, Surveyors and Land Agents, 5a, Lincoln's-inn-fields

EASTBOURNE, SUSSEX.—FREEHOLD PROPERTY FOR SALE.—NOTICE to BUILDERS and BRICKMAKERS.—TO BE LET, by PRIVATE CONTRACT, a BUILDER'S PREMISES, in the centre of the town. Large yard, two yards, and 28 rooms, fitted with steam machinery, all now in full possession of an old-established business. The premises can be seen at work any day. The premises can be had with or without the stables. The present proprietor is leaving the town. Also a BRICKFIELD, in full work, with a House on it. Would be sold separate or together.—For particulars, apply to WILLIAM BARKHURST, Builder, Eastbourne.

SEAFORD, near NEWHAVEN, SUSSEX. To Builders and Others.—Eligible PLOTS for BUILDING, with full sea view, and comprising every advantage. TO BE LET, on Building Leases for 99 years. The railroad is to open in less than a month, and runs directly into the centre of this beautiful and sheltered watering place.—For plans and particulars, apply to Messrs. IWM. G. SMITH-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

SUNNINGDALE, BERKS.—TO BE LET, on BUILDING LEASES, for the erection of GENTLEMEN'S RESIDENCES, portions of an Estate, in the neighbourhood of Windsor Park, and in close proximity to the Sunningdale Railway Station. The neighbourhood is healthy. The Estate commands extensive and picturesque views, and good views of the surrounding district.—For particulars, apply to Messrs. CLUTTON, 9, Whitehall place, Westminster.

DEPTFORD, Kent.—To BUILDERS, ENGINEERS, SHIPWRIGHTS, SMITHS, MANUFACTURERS, and Others requiring or desiring commodious Tenements or Residences for their workmen, or to societies or individuals wishing to provide improved Dwellings for the Working Classes.—The Corporation of Trinity House, having otherwise provided for the inmates of their establishment known as the Lower Ground Almshouses, at the Strand, Deptford, comprising Twenty six distinct Dwellings, hereby give notice, that they are willing to receive TENDERS for LETTING the said HOUSES on a repairing lease for 21 years, or more, as may be agreed. Each house consists of a basement, ground, and chamber story, five having yards and additional offices; and the others can readily have every necessary accommodation added to them. The whole is approached from the street through a private gateway, and is in itself as a distinct precinct. These houses are situated in the centre of the large manufacturing districts on the South side of the Thames. They are also, from the cheapness of the crossing at the ferry, very conveniently situated in relation to the large district of the manufactories on the opposite side of the river, from Mill wall and the Isle of Dogs to the localities adjoining. For permission to view, apply to Mr. NORTHWOOD, No. 1, on the Premises. The whole are to be let by Tender, in One Lot, and MONDAY, the 30th of MAY next, is the day fixed by the Corporation for receiving the Tenders.—For further particulars apply at the Offices of Mr. RICHARD SUTER, Architect and Surveyor, 20, Gracechurch-street, E.C. and where a plan of the property may be seen.
P. H. BERTHON, Secretary.
Trinity House, March 28, 1864.

BUILDING LAND at CHITT'S HILL WOOD GREEN, overlooking three different counties, fronting the high road, eight minutes walk from the station at Alexandra Park, TO BE LET for the erection of superior Villa Residences, which are in great demand in this beautiful locality. Term 99 years. Money advanced if required.—A plan may be seen, and particulars obtained, on application to S. HEWITT, Architect and Surveyor, 101, Great Russell-street, Bloomsbury, W.C.

BUILDING LAND, Reading, Berks. FOR SALE, by PRIVATE CONTRACT, in lots suited for the erection of private Dwelling-houses, several acres of FREEHOLD BUILDING LAND, forming part of the rapidly improving West Suburb of the Town. The roads on the Estate are excellent. The property is ornamentally timbered, and several portions of it are well fenced in with hedges, and planted with trees and shrubs of many years' growth. Distance from the centre of the Town and the Railway-stations, about a mile. A second Church is being erected in the immediate neighbourhood. Money advanced if required.—Apply to Mr. W. WEEDON, Solicitor, Reading.

IMPORTANT to COAL PROPRIETORS, CAPITALISTS, and OTHERS.—The owners of valuable MINERALS of COAL, lying within and under a compact freehold estate of upwards of 150 acres, situate about three miles from the important manufacturing town of Blackburn, Lancashire, are prepared to treat for the absolute SALE of the COAL, or to enter into favourable arrangements for leasing the same for a term of years. Good railway roads intersect the estate, and the same is within very easy distance of railway and canal.—For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

TO BUILDERS and OTHERS.—BROMLEY, KENT.—LAND TO BE LET, for Building, on Lease, for ninety-seven years, about half a mile from a railway station and adjoining the town of Bromley. Well, sand and gravel with a good supply of water.—For particulars, apply to Messrs. PRESTON & DORMAN, 15, Gresham-street, E.C.

BUILDING LAND.—Several PLOTS TO BE LET on LEASE for 99 years, in the Park, Highgate. One of the healthy situations in the vicinity of London, with extensive and beautiful views. A new church and a railway station immediately contiguous. Sewers and roads on the most approved construction are being made. Gas and water can be readily supplied.—For particulars apply to T. H. WYATT, Esq. No. 7, Great Russell-street, Bloomsbury, W.C., or to M. WHEELER, Builder, South Grove, Highgate, N.

BUILDING LAND TO BE LET, on advantageous terms, for 99 years, situate at Merton, Surrey, within ten minutes' walk of the Wimbledon Station, or 4 minutes of the City.—The plan of estate can be seen, and particulars obtained upon application to Mr. EDWIN SHALES, Surveyor's Office, Christ's Hospital, Newgate-street, from TEN till FIVE o'clock.

BUILDING LAND TO BE LET on LEASE in the Lower Richmond-road, within a mile of Putney and Barnes Railway Stations.—Apply to W. R. WOOD, Timber Merchant, Wandsworth.

EXMOUTH.—To BUILDERS, CAPITALISTS, and OTHERS.—Notice is hereby given, that by a recent order of the Court of Chancery, the restriction against letting for long terms of years, imposed by the will of the late Lord Rolle, and in consequence of which the extensive and beautiful district situate in the vicinity of the town of Exmouth, and reaching to the villages of Littleham and Budleigh Salterton, has up to the present time been unavailable for building purposes, has been removed, and the Trustees of the property are now prepared to entertain offers for taking the LAND on LONG LEASES. The advantages of the situation, as regards salubrity, climate, and beauty of scenery, are well known, and are so fully recognised as to render it needless to refer to them more particularly.—All communications are to be addressed to Messrs. FRERE, CHOLMELEY, & FOX-TUR, of No. 28, Lincoln's Inn-fields, London, W.C. Solicitors to the Estate.

IPSWICH, Suffolk. — Valuable Leasehold BUILDING LAND TO BE LET, on advantageous terms, eligibly situate near the Great Eastern Railway Station. Houses are much in demand in this locality an excellent opportunity for investment is therefore offered.—Further information may be obtained of Mr. F. BARNES, Architect, Ipswich.

ALUM BAY ESTATE, FRESHWATER, ISLE of WIGHT.—BUILDING LAND TO BE LET, for a term of ninety nine years, land-tax redeemed. Rent moderate.—Plans can now be obtained of Mr. AUGUSTUS FRERE, Architect and Surveyor, 22, Henrietta-street, Covent Garden, London; of Mr. WILLIAM RAWLINS, Solicitor, Winchester; of Mr. C. F. FISHER, Solicitor, Ventnor; or of Mr. S. M. BAKER, Solicitor, Ryde, where plans showing the disposition of the estate may be seen.—The journey from London via Lymington and Yarmouth, can be accomplished in about five hours.

TO BUILDERS.—TO BE LET, on leases, direct from the freeholders, several valuable PLOTS of LAND, fronting Stanstead-lane, and nearly midway from Forest hill and Catford Bridge Stations. The water and gas pipes are laid down, and the sewer is made.—Apply to Mr. DAVENPORT, Estate Agent, 35, Bucklersbury, E.C.

WHARF, at CHARLTON, near Woolwich Dockyard, TO BE LET on Lease, or the Lease TO BE SOLD, a WHARF 240 feet deep, river frontage 178 feet 6 inches, with dwelling-house, out-buildings, gauntry, frame, &c.—Apply to the Wharfingers, on the Premises, Messrs. CHURCH & CO. Willian-street, Woolwich; or Mr. HARVEY, 81, Page-street, Westminster.

GROUND in HIGH STREET, Borough.—The Governors of St. Thomas's Hospital are prepared to receive TENDERS from parties desirous to take on a Building Lease, for a term of 99 years from Christmas next, the valuable and extensive PLOT of the premises known as the CATHERINE WHEEL INN, and Nos. 2 and 3, HIGH STREET, BOROUGH. Plans and Particulars, with form of tender, may be obtained at the counting house of the Hospital, No. 13, St. Thomas's-street, Borough, or at Mr. HENRY CURREY'S office, No. 4, Lancaster place, Strand, and the Form of Lease may be seen (if desired) at the Office of Messrs. CLAYTON, COOKSON, & WAINEWRIGHT, No. 6, New Square, Lincoln's Inn. The Tenders are to be delivered on or before MONDAY, the 6th JUNE, at 14, St. Thomas's street, where the Governors will meet on TUESDAY, the 7th of JUNE, at half past TEN o'clock, a.m. to consider the same. The Governors do not bind themselves to accept the highest or any Tender.
HENRY CURREY.
4, Lancaster-place, Strand, W.C. May, 1864.

ATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.
The above RANGE is most complete, and strongly recommended its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, GRABILITY, and is a certain CURE for SMOKY CHIMNEYS. It is an entirely new invention, and consists of large MEAT OASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The forms a HOT PLATE for BOILING, STEWING, &c. The whole ated by ONE SMALL FIRE. One 5 feet wide is equal to an ordi- ry Range 8 feet wide.
Extracted from the "London Daily Telegraph," May 19th, 1862.
"INTERNATIONAL EXHIBITION, CLASS 31.
"Of the most recent inventions it should be said that Messrs. ONES & ROWE'S Patent Worcestershire Range has attracted very ecial attention, and has been commended by the best authorities. A luable peculiarity of their Ranges is the placing of the OVEN and OASTER one above the other instead of side by side; and the OASTER is constantly replenished with fresh air."

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

PATENT HELIO-SCENE SUNBLIND.

These blinds give a highly decorative finish to the front of a house, and are fitted in frames of any design, the cases fitting into reveals of windows as other outside-blind cases. ESTABLISHED 1852.

BARROW LIME.—JOHN ELLIS & SONS, Leicester, are now prepared to DELIVER the best FRESH BURNT BARROW LIME, at the St. Pancras Station of the Midland Railway, direct from the kilns, at 20s. per ton.—The Barrow Lime is well known as a very superior Hydraulic Lime from the Blue Lias Stone.—March, 1864.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 66, South John-street, Liverpool.

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks. The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.

Prices and particulars furnished on application to MR. EVAN EVANS, Manager, Pary's Mine Works, Holywell, Flintshire.

The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.

Agents wanted. No applications attended to without a banker's reference.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.
IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO'S Pattern book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.
May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.
London Agents.—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES,
PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, N. finally, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Juries," page 551, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TERRA COTTA and Fine STONEWARE
POTTERY, warranted to stand Frost.
JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.
A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."
Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.
Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.
London Office, 377, Oxford-street, W.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.
Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 29 and 30, Upper Belgrave-place, Pimlico, S.W.

INTERNATIONAL EXHIBITION, 1862.
CLASS 35, No. 6849.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.
In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.
Experience has shown that this shape is the most simple and efficient and that in strength, durability, and cleanliness it cannot be surpassed by the commonest expensive closets.

HAINES is directed to SELL by AUCTION, on MONDAY and TUESDAY, MAY 30 and 31, at TWELVE o'clock, all the CAPITAL BUILDING MATERIALS of EIGHT DWELLING-HOUSES, with a spacious HABERDASHER'S SHOP, situate Nos. 17 to 24, UPPER EATON-STREET, PIMLICO; comprising upwards of a million of prime STOCK BRICKS, several tons of lead, in large flats, gutters, pipes, and sinkings, excellent internal fittings of the usual description, paved hall and staircases, three handsome plate glass large show rooms, with two counters in mahogany and brass moulded shop windows, and large plate glass, patent revolving iron shutters, six lofty scagliola columns, and useful fittings. May be viewed.—Catalogues of Messrs. HAINES & SON, Auctioneers, Moorgate-street, City; and at the Auctioneer's Offices, Grosvenor-street West, Eaton-square; and 19, High-street, Kensington.

AT GARRAWAY'S COFFEE-HOUSE, CORNHILL, WEDNESDAY, 1st JUNE, at TWO, TIMBER, 500 loads, Foreign and Colonial; Deals, Battens, 50,000 pieces, ditto; and other Wood Goods.—HY. FREEMAN & CO. Brokers, 3, Crooked-lane, E.C.

WIMBLEDON.—Remarkably choice Sites for the erection of First Class Mansions and Villas. The beautiful Estate formerly attached to the residence of Lord Cottenham (now removed), comprises the magnificently timbered Cottenham Park grounds, and gardens situate on the south-west slope of one of the most commanding hills in the county of Surrey, and affording opportunities that cannot elsewhere be equalled, for gentlemen who may wish to combine all the advantages of modern residences, upon ancient, well-matured grounds, in one of the most delightful districts near London.

MESSRS. DEBENHAM & TEWSON are instructed to SELL, at the MART, on TUESDAY, JUNE 7th, at TWELVE, in 17 lots, varying from three-quarters of an acre to 6¼ acres each (unless an acceptable offer be previously made) the very valuable and most beautiful FREEHOLD ESTATE, known as Cottenham Park, comprising nearly 40 acres of magnificently timbered grass land, having the important advantages of a dry, gravelly, subsoil, an undulance of the most picturesque character, close to good roads, contiguity to a church, ready accessibility from London by rail, being only about seven miles' drive from Hyde Park, and within a few minutes' ride by the railway which will very soon be extended to Cannon-street, City, and situation and scenery that certainly cannot be surpassed, and is but seldom equalled, even in this beautiful and highly favoured district.—Particulars (now ready) of Messrs. FRESHFIELD & NEWMAN, Solicitors, 5, Bank Buildings; and of the Auctioneers, 80, Cheapside

SURREY HILLS.—Beautiful Building Sites, forming the first portion of the Kenley Park Estate, only a mile from the Caterham Junction Station on the London and Brighton and South Eastern Railways, four miles from Croydon, and adjoining Kenley Station on the Caterham line

MESSRS. DEBENHAM & TEWSON have received instructions to offer for SALE, at the MART, on TUESDAY, JUNE 21, at TWELVE, in lots, varying from one to ten acres or more in extent, the FIRST PORTION of the KENLEY PARK ESTATE, comprising about 110 acres, offering some of the most attractive sites for building within fifteen miles of London, the situation being one of the most healthy on the range of the Surrey hills, the soil and climate remarkably dry, the air pure and invigorating, and the surrounding scenery of singular beauty. The land will be divided into lots to suit the requirements of gentlemen desirous of having detached houses for their own occupation, with sufficient land to enable them to enjoy the retirement of the country, combined with the advantages of ready access to the metropolis. The whole is freehold and land-tax redeemed.—Particulars, plans, of Messrs. JOHNSTONE, FARQUHAR, & LEECH, Solicitors, 85, Moorgate-street; and Messrs. DEBENHAM & TEWSON, 80, Cheapside.

Valuable POTTERY and BRICKFIELD, with 25 Acres of LAND situate within 10 miles of Brighton, 14 miles from the Burgess-hill Station, and 4½ miles from Hayward's heath Station, at both which places extensive building operations are going on.

MESSRS. DEBENHAM & TEWSON have received instructions to SELL, at the MART, on THURSDAY, JUNE 30th, at TWELVE, in One Lot, the valuable FREEHOLD PROPERTY, known as the Ditchling Pottery and Brickfield, situate in the parish of Ditchling, Sussex, and comprising a superior newly-erected Dwelling-house, with garden, stabling, and out-offices, large yard, three capital kilns, extensive sheds and other premises, foreman's house, and 25a 1r. 16p. of Arable and Grass LAND, containing a large extent of brick earth and pottery clay of a very superior quality. The Yard is now in full work; the ware and bricks are celebrated for being the best in the district; the demand greatly exceeds the supply, and the vicinity of railway communication offers great inducements to a capitalist desirous of conducting a profitable trade on an extensive scale.—Particulars of W. TOOTELL, Esq. Edgware; and of the Auctioneers, 80, Cheapside

GARRICK VILLA, HAMPTON, formerly the residence of the celebrated David Garrick, with its beautiful pleasure-grounds and extensive lawn fronting the river Thames, kitchen-garden and paddocks, comprising together between 11 and 12 acres, of which immediate possession may be had; also an Eyot in the river Thames, within a short distance, containing about 4¼ acres, let on lease at £27 per annum

MESSRS. RUSHWORTH, JARVIS, & ABBOTT are instructed by the Executors of the late owner Silvanus Phillips, Esq., to SELL by AUCTION, at the MART, on FRIDAY, JUNE 17th, at TWELVE, in One Lot, the valuable PROPERTY, which is situate on a beautiful wide part of the Thames, known as the Hampton Deeps a great preserve for fish, close to the pictures pque village of Hampton, and only a few minutes' walk of Molseyhurst and Hampton race-course, partly bounded by Bushy Park, and is within a mile of the Palace and gardens of Hampton Court, and the railway station, and only few hundred yards distant from the Thames Valley branch-line to Hampton, rendering the property accessible by rail from the City and west end of the metropolis in three quarters of an hour. The residence is therefore suitable to any gentleman whose avocations require frequent personal visits to and from the town, and it affords every accommodation for a family, with capital stabling and other offices. The property is intersected by the main road leading from Hampton Court to Sunbury, occupying a frontage thereto, on either side of 221 feet and 270 feet respectively, besides frontages in the village, and a frontage of 351 feet to the river Thames; which, combined with its beautiful situation, gravelly soil, proximity to the church, and easy communication with the metropolis, render it worthy the attention of capitalists and builders. In a separate lot will be sold the eyot in the river Thames, above referred to. Cards to view may be obtained of Messrs. HOLLAND & SONS, Upholders, 28, Mount-street, Grosvenor-square, W.; and at the Offices of Messrs. RUSHWORTH, JARVIS, & ABBOTT, Land Surveyors and Auctioneers, Saville-row, W. and 19, Change-alley, E.C.; and without which no person will be admitted. Printed Particulars may likewise be had as above, and of Messrs. COTTERILL & SONS, Solicitors, Throgmorton street, E.C.

FREEHOLD LAND, BATTERSEA, SURREY, close to the New Park, and giving Votes for the County.

GEO. TODD will SELL by AUCTION, on TUESDAY, 7th JUNE, 1864, at the AUCTION MART, opposite the Bank of England, in Plots of FREEHOLD BUILDING LAND, situate in the Bridge road and Park road, close to the New Park, 13 FREEHOLD HOUSES in the latter road, which might be converted into shops, and a FREEHOLD GROUND-RENT of 45l. per year.—Plans and particulars may be had of Messrs. H. & F. CHESTER, Solicitors, 1, Church-row, Newington Butts, and at the Auctioneer's Office, Battersea Bridge road, Battersea Park, S.W.

GREENWICH.—Three acres of valuable FREEHOLD BUILDING LAND, with 300 feet of Water Frontage.

MESSRS. GLASIER & SONS will SELL by AUCTION, on WEDNESDAY, JUNE 1, at GARRAWAY'S, in one lot, three acres of valuable FREEHOLD BUILDING LAND, having a frontage of about 300 feet on Deptford Creek, slightly situate, with good approaches, from Ravensbourne and Road-streets and New Road, near Greenwich. Particulars, with plan, may shortly be had of SAMUEL ARCHBUTT, Esq. 34, Finsbury-square; of W. W. POCOCK, Esq. Architect, 35, Craven-street, Strand; at GARRAWAY'S; and of the Auctioneers, 41, Charing Cross, S.W.

YORK ROAD, LAMBETH.—Leasehold and Copyhold Estate, consisting of about 50 houses, the York-road Chapel, a well-accustomed Public-house in the Belvedere-road, and other properties; the leasehold parts being held for nearly 60 years, and the whole producing a clear rental of about 1,500l. per annum, in a neighbourhood which is rapidly improving.

MESSRS. FOSTER are directed to SELL by AUCTION, at the MART, on TUESDAY, MAY 31, an important ESTATE, mostly leasehold, comprising a large block of excellent property, in and near the York-road, Lambeth, including the Guildford Barge licensed public-house, in the Belvedere-road; Nos. 105 to 132, inclusive, and Nos. 78, 81, and 83 to 91, inclusive, York-road; Nos. 11 to 21, inclusive, Nos. 2 to 6, inclusive, and No. 10, Belvedere-road; Nos. 11, 12, 13, 14, and 16, Johnson-place; Nos. 1 to 8, inclusive, in Addington-place, Addington-street; also an improved leasehold ground-rent of 22l. for 60 years, arising from the York-road Chapel. The various properties will be fully described in the printed particulars of Sale. The whole of the buildings on the Estate were erected by the eminent firm of Grissell & Peto, and are of a character in accordance with their great reputation. Portions of the property are let at ground rents, other parts on leases at full yearly tenants, and held by various leases for terms of which about sixty years are unexpired, at ground rents, and producing a well-secured income of nearly 1,500l. per annum. The copyhold is held of the Manor of Lambeth.—Particulars may be had, twenty days before the Sale, at the Mart; of Messrs. J. & G. BARNARD, Solicitors, 148, York-road, Lambeth; and of Messrs. FOSTER, 54, Pall-mall,

An extensive Assortment of English and French PAPERHANGINGS and DECORATIONS, and the largest and best Stock of MARBLE CHIMNEY-PIECES ever offered to public competition.

MR. EDWIN WHITE is directed to SELL by AUCTION, at his ROOMS, 13, Holborn Bars and 1, Crest street, Holborn-hill, on TUESDAY next, at ONE, a valuable STOCK of English and French PAPERHANGINGS, comprising flocks, gold satins, grounds, tints, sraglios, Siennas, white and other marble oaks, granites, and others in great variety. Also nearly 200 CHIMNEY PIECES in all the white and coloured Marbles, some enamelled Slate Chimney-pieces, a few Watercloset, and half a ton of White lead and Colours.—May be viewed, and catalogues had, on Monday morning of Sale.

For particulars apply at the Offices, 10, REGENT-STREET, and 64, CORNHILL. WILLIAM J. VIAN, Secretary.

MONEY on FREEHOLD and LEASE-HOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION

(Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, no withdrawing fees in advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

WILLIAM H. DRACKLEY.
Clerk to the Trustees of the above Hospital.
Leicester, May 24th, 1864.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.
72—74, Bishopsgate street Within, November, 1863.

COMPETITIONS.

TO ARCHITECTS.—The GLOUCESTER BELL HOTEL COMPANY, LIMITED.—The Provisional Directors invite Architects to furnish PLANS and ESTIMATES for a new HOTEL on the site of the present Bell Hotel, Gloucester, and offer the following premiums:—To the first in merit, 20*l.* and to the second, 25*l.* The Plans must be delivered at or before TEN o'clock a.m. on the 20th proximo (instead of the 18th, as originally advertised), to THOMAS TAYNTON, Esq. Solicitor, Ashmeads House, Gloucester, who will, on application, furnish a plan of the site and conditions.

TO ARCHITECTS.—The Local Board of Health for the Hartlepool District are desirous of obtaining Plans, Elevations, Specifications, and Estimates for a COVERED MARKET, POLICE STATION, and OFFICES, to be erected upon a plot of ground in Middlegate-street, Hartlepool. A premium of 25*l.* will be paid by the Local Board for the plan and estimate selected by them, and a further sum of 5*l.* will be paid to the successful competitor, on condition that he furnishes a detailed specification for the proposed works, such plan, estimate, and specification to become the property of the Local Board. The whole expense of the erections not to exceed 3,500*l.* The Board do not bind themselves to employ the architect whose plan may obtain the premium. A plan of the ground and printed particulars can be obtained on application to the Borough Surveyor. All drawings to be on a scale of not less than 8 feet to the inch, and to be sent under motto, with sealed names (carriage free), addressed to the Borough Surveyor, King-street, Hartlepool, and endorsed "Market Plan," on or before the 18th day of JUNE next.—By order,
F. G. MORRIS, Borough Surveyor.
May 13, 1864.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to WELL SINKERS and OTHERS.—TENDERS are required for LOWERING DOWN a 6-inch bore PIPE to a depth of 230 feet, if necessary, beyond the bottom of the present 6-inch bore Pipe, in the Well, at the Laundry, at Netley, Hants.
The specification may be seen, and forms of Tender obtained, on application at this Office.
The Secretary of State does not bind himself to accept the lowest or any Tender. (Signed) P. RAVENHILL, Major,
Commanding Royal Engineer, Netley.
Royal Engineers' Office, Netley, 23rd May, 1864

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.
Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Penarth, near Cardiff, in the county of Glamorgan, may inspect the Drawings and Specifications at her Majesty's Custom-house at Cardiff or at this Office, between the hours of TEN and FOUR, from THURSDAY, the 19th of MAY, to SATURDAY, the 4th JUNE now next ensuing, and both inclusive (Sundays excepted).
Tenders to be sent to this Office not later than TWELVE o'clock at noon, of MONDAY, the 6th JUNE, under seal and directed to the Commodore Controller-General of Coast-Guard, and endorsed "Tender for Penarth."
The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.
Dated this 16th day of May, 1864, at the Admiralty, Coast-Guard Office, 12, Spring-gardens, London, S.W.

WAR DEPARTMENT CONTRACTS.—Such Persons as are desirous of UNDERTAKING the several Works and Repairs to the FORTIFICATIONS, MILITARY STORE BUILDINGS, BARRACK, and other BUILDINGS required by the WAR DEPARTMENT, at the places undermentioned, upon a CONTRACT, to commence on the 29th JUNE, 1864, and terminate on the 31st MARCH, 1865, may be furnished on payment of seven Shillings and Sixpence, with the Printed Schedules of Prices, Conditions of Contract, and every necessary information respecting the same, on personal application at this Office between the hours of ELEVEN and THREE, each day (Sundays excepted), from the 1st to the 9th JUNE, 1864, after which no further issues will be made.
Stations for which separate Tenders will be received:—
Portsmouth, including Portsea, Southsea, and Landport, and within five per cent. thereof, Lumps, Eastney, and Cumberland Forts.
Hilsea, including Tipner.
Fareham and Holland Works thereon, excepting Fort Wallington.
One Contractor only will be accepted for the whole of the Trades for each of the above named Stations, but the rates of per centage at which the parties tender may be different for each trade, at their option, but such rates must be shown in the proper place in each of the Schedules.
The Tenders will require to be delivered, before TWELVE o'clock at Noon on the 11th day of JUNE, 1864, at the War Office, Pall-mall, London, addressed to "The Director of Contracts," and endorsed "Tenders for Artificers' Work, Portsmouth District," in the left-hand corner of the envelope.
N.B.—The Secretary of State for War reserves to himself the right of rejecting the whole or any of the Tenders.
C. FANSHAWE, Colonel, Commg. Royal Engineer,
Royal Engineer Office, Portsmouth District.
Portsmouth, 18th May, 1864

TO BUILDERS.—Builders desirous of CONTRACTING for the ERECTION of PREMISES at Evercreech, near Shepton Mallet, can apply by letter only, for particulars, on which the bills of quantities will be issued, to Mr. HARRY H. NEWTON, Architect and Surveyor, 6, Argyle street, Regent street, London, W.

TO BUILDERS and CONTRACTORS.—The Building Committee of the St. Thomas Lunatic Hospital are desirous of receiving TENDERS for the ERECTION of a new LUNATIC HOSPITAL on a piece of land near the Topsham Barracks, in the parish of Heavitree, Devon, according to plans and specifications which may be seen at my Office. Sealed Tenders are to be delivered to me on or before MONDAY, JUNE 13th, 1864, endorsed "Tender for Lunatic Hospital." The Contractor will be required to provide two sureties for the due and satisfactory performance of the contract. The Committee do not bind themselves to accept the lowest or any Tender, and no payment will be made for estimates.
W. F. CROSS, Architect, Queen-street, Exeter.
May 2nd, 1864.

CONTRACTS.

BOARD of WORKS, WHITECHAPEL DISTRICT.—A Meeting of this Board will be held on MONDAY, the 30th day of MAY, 1864, at SIX o'clock in the Evening, at the Office, No. 15, Great Alie-street, Whitechapel, to receive TENDERS from persons willing to Contract for the period of One Year for the EXECUTION of the several PAVING WORKS connected with the DISTRICT, described in the specification or schedule of contract prepared by the Board, a copy of which, with the form of Tender, may be obtained at the Office of the Board upon payment of Ten Shillings, which sum will be returned to persons tendering. All Tenders must be delivered at the Office previously to the hour of meeting; and any Tender which is not upon the printed form prepared by the Board, and duly signed by the person or persons tendering, will be rejected. Persons tendering, or their representatives, are required to attend the meeting of the Board. The Board do not bind themselves to accept the lowest or any Tender.
ALFRED TURNER, Clerk to the Board.
15, Great Alie street, Whitechapel, 17th May, 1864.

TO STONE MERCHANTS.—The Council of the Borough of Margate are willing to receive TENDERS for about 5,000 feet superficial of 9-inch MOULD YORK PAVING, to be delivered in the Harbour of Margate, free of all charges, on or before the 30th day of JULY next. Tenders, addressed to the Town Clerk, to be sent in before ELEVEN o'clock on TUESDAY, the 31st instant. The Council do not bind themselves to accept the lowest or any Tender.
WM. BROOKE, Town Clerk.
Margate, 12th May, 1864.

WIGAN LOCAL BOARD of HEALTH.—To SCAVENGERS, NIGHT-SOIL CONTRACTORS, and OTHERS.—The Local Board of Health for the District and Borough of Wigan hereby give notice that they are willing to receive TENDERS from parties desirous of undertaking the following CONTRACT, viz.:—The cleansing of the ashpits and cesspools, and the removal and carting away of the contents of the same, as also the removal and carting away of the sweepings from the markets, streets, lanes, courts, highways, and places within the said district. The contract to be for a term of three or five years, at the option of the Local Board. A specification of the work required to be performed may be seen, and form of Tender had, on application to the Surveyor of the Local Board, at his Office, No. 67, Wallgate, Wigan; and sealed Tenders, endorsed "Tenders for Scavenging," must be delivered at the said Office, addressed to Mr. J. L. HUNTER, the Engineer of the Board, by TWELVE o'clock at noon on WEDNESDAY, the 8th day of JUNE next.
CALEB HILTON, Town Clerk and Clerk to the Local Board.
Wigan, May 18, 1864.

WEAVER NAVIGATION.—To CONTRACTORS.—The Trustees of the River Weaver are prepared to receive TENDERS for the CONSTRUCTION of a SLUICE, at Weston Point, near Runcorn. Plans and specifications may be seen at this Office after the 18th instant. Sealed Tenders to be delivered at the Office of the Trustees, Northwich, on or before the 4th day of JUNE next. The lowest or any Tender not necessarily accepted.
Engineer's Office, Northwich, May 10, 1864

TO CONTRACTORS, ENGINEERS, and OTHERS.—Notice is hereby given, that the Southampton Harbour Board is prepared to receive TENDERS for certain works to be performed in EXTENDING the WOODEN JETTY at the TOWN QUAY, and for the CONSTRUCTION of an additional TRAMWAY thereon.—Also for PROVIDING and FIXING FLOATING IRON PONTOONS, LANDING STAGE, &c. at the ROYAL PIER, and for REPAIRS.—Plans, Specifications, and Form of Tender, and all further information, may be obtained on application to Mr. GEDDES, Surveyor to the Board, at his Office at the Town Quay, on and after the 24th day of May; and separate Tenders for the several Works must be sent to my Office, 3, Lower Bugle street, on or before the 29th day of JUNE next. No pledge is given to accept the lowest or any Tender.—By order of the Board,
WILLIAM FARRAND, Clerk.
Audit House, Southampton, 17th May, 1864.

TO BUILDERS.—Persons wishing to TENDER for the ERECTION of a new TOWN HALL, Congleton, may see the Plans, Specifications, and Conditions, and obtain a copy of quantities, on application to Mr. MOORHOUSE, the Town-clerk of Congleton, or to the Architect, on or after the 1st day of JUNE next. Sealed Tenders to be delivered to the Architect, on or before the 13th of JUNE next.
Conditions of Tendering:—1. The Town Council do not bind themselves to accept the lowest or any Tender. 2. The Contractor for the building will be required to furnish two sureties for the due performance of the contract. 3. The Council do not guarantee the quantities.
EDWARD W. GODWIN, Architect,
21, Portland-square, Bristol.

PERSONS desiring to TENDER for the ERECTION of a NEW CHURCH at BRITONFERRY, may see the Drawings and Specifications at my Office at Llandaff, on and after the 19th day of MAY. Sealed Tenders are to be sent to the Rev. D. LEWIS, Britonferry, Glamorganshire, by SIX o'clock p.m. on FRIDAY, the 10th of JUNE. The right of rejecting all or any of the Tenders is reserved. JNO. PRICHARD, Diocesan Architect.
Llandaff, May 11th, 1864.

TO MASONS and PAVIORS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the SUPPLYING and LAYING complete about 2,000 feet run of 12-inch by 8-inch DRESSED ABERDEEN FLAT KERB and of about 13,200 feet superficial of 3-inch TOOLED YORK PAVING, in the parish of Battersea. The specification can be seen at the Offices of the Board, as below, between the hours of NINE and FIVE. Tenders are to be sent in, under seal, addressed to the Board, and endorsed "Tender for Paving Batterses," on or before the 14th of JUNE next. Security will be required for the due execution of the contract. The Board do not pledge themselves to accept any Tender.
By order of the Board of Works for the Wandsworth District,
ARTHUR ALEX. CORSELLIS, Clerk to the Board.
Battersea-rise, Wandsworth, S.W. May 20, 1864.

[*For remainder of Contracts see next Page.*

CONTRACTS.

CROYDON LOCAL BOARD of HEALTH.—T. IRONFOUNDERS and OTHERS.—Persons desirous of contracting with the Croydon Local Board of Health for supplying, fixing, and delivery of the East Croydon Railway Station, of 3000 yards of 6-inch, and 2000 yards of 4-inch IRON SOCKET PIPES, and a small quantity of light castings, in accordance with the specification prepared by Mr BALDWIN LATHAM, C.E. the Engineer of the Croydon Local Board, can inspect the specification and obtain forms of tender at the Board-room, No. 7, Old Town, Croydon, on and after TUESDAY, the 17th day of MAY. Sealed Tenders, endorsed "Tender for Iron Pipes," are to be delivered at the Offices of the Local Board, in the Town Hall, Croydon, on or before FOUR o'clock from TUESDAY, the 7th day of JUNE next.

11th May, 1864 HENRY RICHARDS, Clerk to the Board.

TO BUILDERS.—TENDERS WANTED, for the ERECTION of a SEA-WALL, on the estate of Henley Smith, esq. The Priory, St Helen's, Isle of Wight. 12, Parliament-street, Hull, 24th May, 1864.

TO CONTRACTORS.—The Commissioners of the Hornsey Reservoir are desirous of receiving TENDERS for NEW WORK in accordance with Sheets of the Sewage Reservoir. The Drawings and Specification can be seen, and form of Tender obtained at the Office of Mr. BIDDER, Civil Engineer, Parliament-street, on and after SATURDAY, the 28th instant. Sealed Tenders, addressed "Tenders for Sewage," to be lodged at Harbour Office Limehouse, not later than MONDAY, the 6th JUNE. The Commissioners do not bind themselves to accept the lowest or any Tender.

Limehouse Harbour Office, May 23rd, 1864.

TO BUILDERS.—Persons willing to TENDER for BUILDING a HOUSE in Bower Mount road, Maidstone, may see the plans and specification at the Office of Mr. MARTIN BULMER, Architect, Tonbridge-road, Maidstone between the hours of TEN and FIVE, except on Sunday (Sunday excepted). Tenders for the said House, addressed to Mr. BULMER, Bower Mount road, are to be delivered by TEN o'clock in the forenoon of SATURDAY, the 11th day of JUNE. All Tenders must be in the "Form of Tender" to be obtained at the Office of the Architect. Neither the lowest nor any other Tender will be accepted, unless approved of in all particulars, and security will be required for the due performance of the work.

Maidstone, 20th May, 1864.

TO BUILDERS and OTHERS.—Notice is hereby given, that Plans and Specifications for RESTORING, ALTERING, and ENLARGING the PARISH CHURCH of St. John the Baptist, at Capel, near Dorking, in the county of Surrey, will be open for inspection at the Office of Mr. ARTHUR BLOMFIELD, 54, Great Ormond-street, London, on and after the 31st day of May next ensuing, both inclusive (Sunday excepted). All persons intending to CONTRACT for the Execution of the Works must send in sealed Tenders, directed to the Rev. T. R. O'FLAHERTY, at Capel Rectory, on or before the 23rd day of JUNE next ensuing. Not the lowest nor any Tender will necessarily be accepted. The contract, if approved, to be prepared with the usual and approved clauses, and entered into by the successful party in the usual bond for the due fulfilment of his contract.

Dorking, 24th day of May, 1864.

TO BUILDERS and OTHERS.—Notice is hereby given, that Plans and Specifications for BUILDING a NEW BRIDGE at Capel, near Dorking, in the county of Surrey, will be open for inspection at the Office of Mr. ARTHUR BLOMFIELD, 54, Great Ormond-street, London, on and after the 31st day of May next ensuing, both inclusive (Sunday excepted). All persons intending to CONTRACT for the Execution of the Works must send in sealed Tenders, directed to HENWOOD KING, Esq., at Leases Hall, Dorking, on or before the 18th day of JUNE next. Not the lowest nor any Tender will necessarily be accepted. The Contract, if approved, must be prepared with the usual and approved clauses, and entered into by the successful party in the usual bond for the due fulfilment of his contract.

Dorking, 24th day of May, 1864.

TO BUILDERS and CONTRACTORS.—TENDERS are required for ERECTING a VILLA RESIDENCE, at Tarn-hill, Cullingworth. The specification and plans can be seen at the Office of Mr. BENJAMIN DELAUNE, Architect and Surveyor, 17, Bridge-street, Lambeth, S. on MONDAY next, the 30th instant, and on TUESDAY, JUNE 7, Tenders to be delivered to the Architect, on THURSDAY, JUNE 23rd, at 11 EVEN o'clock a.m.

TO BUILDERS and CONTRACTORS.—Persons desirous of TENDERING for the WHOLE or a PORTION of the WORKS required in the ERECTION and COMPLETION of a TANNERY, at Skipton-in-Craven, York, for the York Tanning and Currying Company, Limited, can inspect the drawings and specifications at the White Swan Inn, Skipton-in-Craven, on TUESDAY, MAY 31st, and WEDNESDAY, the 1st of JUNE from TWO till FOUR o'clock. The quantities are drawn out and may be copied on application to Mr. TAIT. Tenders must be delivered not later than TWELVE on FRIDAY, the 10th day of JUNE, addressed to JAMES MEEK, Esq. 71, Goodramgate, York.—The proprietors do not pledge themselves to accept of the lowest or any Tender.

York, May 24, 1864.

TO SEWER CONTRACTORS and OTHERS.—The Board of Works for the Westminster District hereby give notice that they are prepared to receive TENDERS for the EXECUTION of General Works and Repairs to the Sewers, Gullies, Drains, &c within the District under the jurisdiction of the said Board, for the term of One Year, commencing from Midsummer next. Printed Conditions of Contract, schedules of Prices, and Forms of Tender may be obtained upon application at the Offices of the Board, Great Smith-street, Westminster, when sealed Tenders are to be delivered by or before FOUR o'clock in the afternoon on WEDNESDAY, the 8th day of JUNE next at which time and place the Tenders will be opened and may be in attendance. No Tenders will be received unless made out on one of the printed forms and strictly in accordance with the conditions. The Board do not bind themselves to accept the lowest Tender.—By order,

W. F. JEBB, Clerk to the Board.

Great Smith-street, Westminster, May 24th, 1864.

THE Directors of the Tottenham and Edmonton Gaslight and Coke Company are desirous of receiving TENDERS for BUILDING a RETORT HOUSE Chimney, and Retort Bench for Retort House. Plans and specifications may be seen on application at the Works, from the 30th MAY to the 2nd JUNE To them for the above to be sent in on or before FRIDAY, the 3rd day of JUNE, endorsed "Tender for Retort House, &c." The Directors do not pledge themselves to accept the lowest Tender.—By order,

DAVID BARCLAY, Engineer.

Gas-house, Tottenham N. Dated 23rd May, 1864

BERMONDSEY VESTRY.—To BUILDERS, SEWER CONTRACTORS and Others.—The Vestry of the Parish of Bermondsey, in Surrey, will meet at the Parish Offices, Spa-road, Bermondsey, on MONDAY, the 6th day of JUNE next, at SIX o'clock in the evening precisely, to receive TENDERS from persons willing to CONTRACT for the EXECUTION of GENERAL WORKS and REPAIRS to the SEWERS, GULLIES, DRAINS &c within the Parish for the term of one year from the 25th day of JUNE, inst. to the 24th day of JUNE, 1865. Printed forms of Tender may be obtained, and the draft contract and bond prepared on and after MONDAY, the 30th instant, at the Vestry Offices, Maltby-street, daily, between TEN and FOUR o'clock. The Vestry do not bind themselves to accept the lowest or any Tender. Persons tendering are required to attend the Board meeting, to explain the Tender if necessary.

By order of the Board,
JOHN H. DREW, Clerk.
Vestry Offices, Maltby-street, 23rd May, 1864.

TO BUILDERS.—The Guardians of the Poor of the parish of Lambeth are prepared to receive TENDERS for ERECTING a NEW VAGRANT WARD, at the Workhouse of that Parish, in Princes-road. The plans and specification, with the conditions to be complied with, may be seen at the Office of the Architect, Mr. ROBERT PARRIS, No. 2, Wellington-place, Lambeth, on and after WEDNESDAY, the 1st day of JUNE next, by whom the Tender are to be delivered not later than MONDAY, the 6th JUNE next.—The Guardians do not bind themselves to accept the lowest or any Tender.

BERMONDSEY VESTRY.—To DUST CONTRACTORS, BRICKMAKERS, FARMERS, and OTHERS. The Vestry of the parish of Bermondsey, Surrey, will meet at the Parish Offices, Workhouse, Rassell-street, on MONDAY, the 6th day of JUNE next, at SIX o'clock in the Evening precisely, to receive TENDERS from persons willing to purchase all the DUST, ASHES, RUBBISH, GARDEN, and other REFUSE which may be collected from the manufactories, houses, and premises in the said parish, from the 25th day of June, 1864, to the 24th day of June, 1865. The dust and refuse will be collected by the Vestry, and not delivered in the state in which it is collected to the purchaser, at any place of deposit to be named by him within three-quarters of a mile of the boundary of any part of the parish. The dust and refuse will be required to be paid for monthly within seven days after the delivery of each monthly account. A deposit of and to 50 loads will be required to be made by the person whose Tender may be accepted as the one the Vestry may be called upon, and such deposit to remain in the hands of the Vestry during the term of the Contract as a security for the due performance thereof, and on the due performance of the Contract to be refunded by the Vestry in part payment of the last monthly account. The certificate of the Assistant Clerk to the Vestry as to the number of loads delivered shall be binding on the Contractor. The Vestry do not bind themselves to accept the highest or any Tender. Forms of Tender may be had and delivered at the Vestry Office, in Maltby-street, on and after the 30th May inst.

GEO. H. DREW, Clerk.

23rd May, 1864.

BOROUGH of BRIGHTON.—To CONTRACTORS and OTHERS.—Notice is hereby given that the Town Council will receive TENDERS from persons or firms as may be willing to contract for the ERECTION of THREE GROYNES on the Beach in the said Borough, namely, one opposite Charlotte-street, one opposite Paston-place, and one opposite Paston-place, agreeably to Drawings and Specification, which may be inspected at the Office of the Borough Surveyor, at the Town Hall, Brighton, where all other necessary information and forms of Tender may be obtained. Sealed Tenders, addressed to the undersigned "Tender for the Erection of Groynes," must be left at my Office, at the Town Hall, before TEN o'clock on MONDAY, the 30th day of MAY, 1864. Power is reserved to reject the lowest or any Tender

DAVID BLACK, Town Clerk.

Town Hall, Brighton, May 18th, 1864.

TO PAVIORS and OTHERS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City, on TUESDAY, the 7th day of JUNE next, at half past TWELVE o'clock precisely, to receive TENDERS for RELAYING the GARRETT-STREET PAVEMENT of Bishopsgate-street Within, and Gracechurch-street, agreeably to specifications, which may be seen at the Office. Persons Tendering are required to give the names and address of at least two substantial householders as their Sureties, to enter into bond with the Contractor for the due performance of the contract. The Commissioners do not pledge themselves to accept the lowest Tender or any unless terms satisfactory; and no Tender will be received after TWELVE o'clock on the day of receipt.

JOSEPH DAW, Principal Clerk.

Sewers Office, Guildhall, 26th May, 1864.

RIXTON and WARBURTON BRIDGE COMPANY.—To CONTRACTORS, IRON-FOUNDERS, and OTHERS.—The Directors of the above Company are prepared to receive TENDERS from persons willing to CONTRACT for the CONSTRUCTION of a BRIDGE, over the River Mersey, at Rixton and Warburton.—Drawings and specifications may be seen, and bills of quantities obtained, upon payment of £1 2s. at the Office of Mr B. P. LYON, Civil Engineer, 1, Victoria-chambers, Westminster, until the 13th day of MAY until the 13th day of JUNE. Tenders endorsed "Tender Rixton and Warburton Bridge" to be forwarded to us, at our office, on or before the 14th day of JUNE next. The lowest or any Tender not necessarily accepted

NICHOLSON & WHITE, Solicitors to the Company.

Warrington, May, 1864.

TO CONTRACTORS. — PORTHCAWL HARBOUR, GLAMORGANSHIRE.—The Directors of the Llynvi Valley and Ogmore Valley Railway Companies are prepared to receive TENDERS for the CONSTRUCTION of a DOCK and other Works, for the Improvement of the Harbour of Porthcawl. Plans and specifications may be seen at the Office of the Engineer, B. P. BRE LYON, Esq., 1, Victoria-chambers, Westminster, after MONDAY, the 9th MAY, 1864; and the Tenders are to be delivered at the same Office, addressed to the Directors of the Llynvi Valley and Ogmore Valley Railway Companies, before TWELVE o'clock on MONDAY, the 13th JUNE, 1864. The Directors will not be bound to accept the lowest or any Tender.

London, May, 1864.

PERSONS willing to TENDER for BUILDING a CONSERVATORY, &c. can inspect the drawings at the Office of the Architect, who reserves the right of accepting the lowest or any Tender. Tenders to be sent in on FRIDAY, JUNE 3, not later than FOUR p.m.

HENRY McCALLA, C.E. Architect.

Office, 25, Westbourne-place, Eaton-square, S.W.

TENDERS for a GAS-HOLDER TANK.—The Directors of the Slough Gas and Coke Company are prepared to receive TENDERS for EXCAVATING the GROUND, and BUILDING a BRICK TANK, 41 feet diameter, and 15 feet deep.—Full particulars may be obtained at the Company's Offices, Windsor-road, Slough. Tenders to be sent under seal, addressed "Tender for Gas Holder Tank," on or before the 7th day of JUNE next.—The Directors do not pledge themselves to accept the lowest or any Tender.—By order of the Directors,

JOHN H. HETHERINGTON, Secretary.

Slough, May 28, 1864.

TENDERS for ALTERING and RE-ERECTING a GAS HOLDER, TWO LIFTS 42 feet by 24 feet. The Directors of the Slough Gas and Coke Company are TENDERS for the ALTERATION and RE-ERECTION of a GAS-HOLDER, from a single lift, 40 feet by 22 feet, to a double lift, 42 feet by 24 feet.—Full particulars may be obtained from the Secretary, and the present positions of the holders, with plans &c. may be seen on application.—Tenders to be delivered on or before the 7th day of JUNE next. The Directors reserve the right to reject any or the whole of the Tenders.

By order,

JOHN H. HETHERINGTON, Secretary.

Slough, May 18, 1864

TO CONTRACTORS and BUILDERS.—The Trustees of Watts's Charity, of Rochester, are desirous of receiving TENDERS for the CONSTRUCTION of certain ROADS and other Works, on land near the new Infant Schools in Ordnance-place, in the parish of Chatham, Kent. Plans, sections, and specifications of the proposed works will be deposited at the said Schools, Maidstone, Medway road, Rochester, and will be open to inspection on and after THURSDAY, the 12th instant, and up to the day of Tender, between the hours of TEN and FOUR o'clock. Information respecting the plans and specifications can be obtained of Mr. A. ROBINS, Surveyor, St. Margaret's Banks, Rochester. Tenders are to be sent in to the Office of Messrs. LEWIS & MARSH, High-street, Rochester, on or before SATURDAY, the 11th day of JUNE next (after which day no Tender will be received), sealed up and addressed "To the Trustees of Watts's Charity, at Rochester," and marked "Tender for Roads" The Trustees will not hold themselves bound to accept the lowest or any other Tender; and the contractor will have to enter into sufficient contract (either with or without surety) as the Trustees shall require, for the due execution of the works, such contract to be prepared by the Trustees' Solicitor, at the expense of the Contractor

By order of the Trustees,

Rochester, May 9, 1864.

J. LEWIS, Clerk.

TENDERS for IRON-FRAMED ROOF.—The Directors of the Slough Gas and Coke Company, Limited, are prepared to receive TENDERS for an IRON-FRAMED ROOF 92 feet 6 inches span, and 52 feet in length. Also a Wrought iron Girder, 21 feet in length and 18 inches deep.—Full particulars, with drawing, may be seen at the Office of the Company, Windsor-road, Slough. Tenders to be sent in on or before the 7th day of JUNE next. The Directors do not bind themselves to accept the lowest or any Tender.—By order, JOHN H. HETHERINGTON, Secretary.

Slough, May 28, 1864.

TO ROADMAKERS.—TENDERS are required for FORMING and MAKING about 650 yards of ROAD, at Cattenham park, Wimbledon, Surrey. Plans, specifications, and conditions may be seen at the Offices of Messrs. DEBENHAM, TEWSON, & CHESTERTON, 80, Cheapside; and of Mr. J. A. BONE, Surveyor, 15, Finsbury-street-hill, E.C. to whom Tenders are to be sent, on or before SATURDAY, the 4th of JUNE next. The lowest, or any other Tender, not necessarily accepted.

CONSERVATIVE LAND SOCIETY.—COLCHESTER ESTATE.—TENDERS are invited for the CONSTRUCTION of ROADS, PIPE-SEWERS, GULLIES, &c on the Society's Estates in St. Botolph's Parish, Colchester Essex

The following quantities are stated, in order to indicate approximately the extent of the proposed works; and their accuracy is not guaranteed:—

New Roads, 50 feet wide, including two footpaths	1,115	feet run.
Ditto, about 23 feet wide, including one footpath	273	ditto.
15-inch Pipe-sewer with 24 single 6-inch allotment eyes, to be taken up and relaid to a new gradient for 251 feet of existing ditto, without such eyes	491	do.
12-inch Pipe-sewer with 13 single 6 inch allotment eyes	234	do.
Ditto, with eyes, to be taken up and relaid to a new gradient	110	do.
Ditto with 4 eyes, to be substituted for 6-inch ditto	64	do.
ditto	78	do.
9-inch Pipe-sewer, with 38 single 6-inch allotment eyes	1,230	do.
Ditto with eyes, to be taken up and relaid to a new gradient		
Gully Cesspools, including gratings, in brick	No. 9	
Ditto to be altered in position	No. 4	
Gully Cesspools built dry, with gratings, but no drains	No. 2.	

The earthworks will include cutting and embanking to formations level of roads, trenches for sewers and gully drains, and pits for gully cesspools; also levelling up of low portions of allotments. About 300 cubic yards of sifted gravel for upper stratum of carriageways, is on the ground; and it is believed that the materials for the whole of the road-making will be got therein (as was the case when the existing roads were made); but this is not guaranteed. The plans, sections and specification may be seen on and after WEDNESDAY, JUNE 1st, at the Office of the Society's Surveyor, Mr. JAMES WYLSON, 33, Norfolk-street, Strand. Where Plans are also at the Office of Mr. W. E. HOLLAND, 4, Heyrick-crescent, on the estate. Tenders, sealed, and endorsed "Tender for Works at Colchester," to be sent in to the Surveyor, on or before FRIDAY, JUNE 10th. The Committee do not bind themselves to accept the lowest or any Tender submitted.

33, Norfolk-street, Strand, London, W.C. May 26th, 1864

ARROWSMITH'S SOLID PARQUET FLOORS.—A SOLID INTERLACED OAK PARQUET FLOOR at 2s. per foot (including fixing), the same price as a plain oak floor. The speciality consists in each separate piece being solid inch thick, grooved, and tongued, and secured at back (not at top) by fastenings, as worked in for the eminent architects, Messrs. W. Burn, D. Brandon, P. C. Hardwick, G. G. Scott, A. Salvin, Sydney Smirke, and others, during the last ten years. Show-rooms, 39, New Bond street, W.

PORTABLE STEAM-ENGINES FOR HIRE OR SALE.
R. RICHARDS & CO. Upper Ground Street, Blackfriars Road.

FIRE-PROOF CONSTRUCTION.—

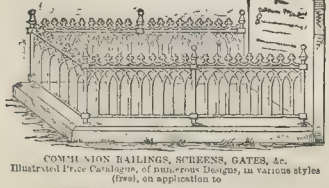
FOX & BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively applied and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private. The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floor and roofs are formed by a combination of plates of wrought or rolled iron with corrugations, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI



TO IRONMONGERS, BUILDERS, &c.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES.
To BUILDERS, CARPENTERS and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ironmakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

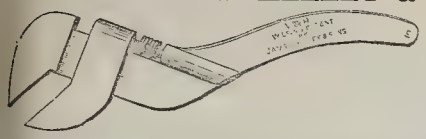
ST. PANCRAS IRON WORK COMPANY,
OLD SAINT PANCRAS ROAD, AND YORK ROAD, KING'S CROSS.



BY HER MAJESTY'S ROYAL LETTERS PATENT.

WILSON'S DOUBLE-ACTION SCREW SPANNER,

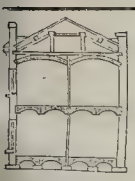
MANUFACTURED BY

JAMES HEELEY & SONS,

Mount-street, Birmingham.

The superiority of this Spanner consists in its novel and rapid mode of adjustment by a double action screw, and its new and convenient arrangement of curved handle and oblique jaws, which, combined with its superior strength and excellent workmanship, render it by far the best and handiest tool of its class hitherto produced. It is being extensively used by Engineers, Manufacturers, Machinists, and Railway and Steamship Companies, and can be had of all respectable Ironmongers.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

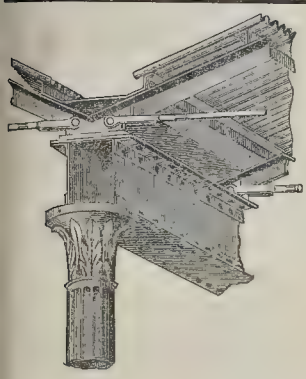


MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES. MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first-class stables in almost every county in England and MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of Irish Architects, noted for adoption only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.



THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 2, Spring Gardens London."

TO BUILDERS, JOINERS, CONTRACTORS, &c.

THE "GENERAL JOINER."

SAMUEL WORSSAM & CO. having long felt the importance of introducing a LABOUR-SAVING MACHINE, which by combining several operations at a moderate cost, should meet the requirements of builders and others engaged in the conversion of timber, beg to offer for this purpose their "General Joiner" as above, which in its present greatly improved form will, with 2 horse power, do the work of at least fifteen skilled hands, in SAWING, CROSS-CUTTING, and SQUARING, PLANING, and THICKNESSING, MORTISING, TENONING, GROOVING, TONGUEING, RABBETTING, BORING, BEADING, MOULDING, CHAMFERING, &c. &c.—For priced illustrated circulars, apply to S. WORSSAM & CO. Saw-Mill Engineers, King's-road, Chelsea (sole manufacturers), where the "General Joiner," and samples of the work may be seen.

THE FURNISHING OF BED-ROOMS.
HEAL & SON have observed for some time that it would be advantageous to their Customers to see much larger selection of Bed room Furniture than is usually displayed, and that a display not only of the style and effect of the different designations of Furniture, it is necessary that each description should be replaced in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed room Furniture, beyond what they believe has ever been attempted, but also to put to several small rooms for the purpose of keeping complete suites of Bed room Furniture in the different styles
Japanese Bed Goods may be seen in complete suites of five or six different colours—one of them in actual ornamental, and others of a plainer description. Suites of Stained Bed Gothic Furniture, Polished Deal, Oak, and Walnut are also set apart to separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.
Bed Steadsteads are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.
A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.
The Stock of Mahogany Goods for the better Bed rooms, and Japanned Goods for servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries feach 125 feet long), and two large ground-floors, the whole forming as complete an assortment of Bedroom Furniture as they think can possibly be desired.
Every attention is paid to the manufacture of the Cabinet-work, and they have introduced large Work-shops on the premises for this purpose, that the manufacture may be under their own immediate care.
Their Bedding trade receives their constant and personal attention, every article being made on the premises.
They particularly call attention to their Patent Spring Mattress, the Somner Bedding Portable. It is portable, durable, and elastic, and how it is made in the old Spring Mattress
HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bedroom Furniture sent free by Post.—196, 197, 198, Tottenham Court-road, London.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminste

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requi large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the ave quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to in duce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the so and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for M Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Station the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Mad (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Stati Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Rail (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.
JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, wit view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of above Architects to be properly laid.

THE LAND SECURITIES COMPANY

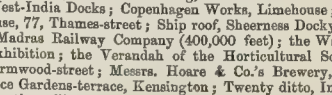
The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.



2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or to be raised by or under the authority of any Act of Parliament, public or private Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title deeds; and they undertake the negotiation of special investments.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32 Charing-cross London S.W.

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE.
SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR. Shops referred to in every public street in London.
When ordering the above, send FINISHED THICKNESS of Shutters, and the way they go up.
Sold by all Ironmongers, and the Inventor,

VOL. XXII.—No. 1112.

The Competition Designs in the Architectural Exhibition.

We have devoted two articles* to the works now exhibited in Conduit-street, but without special notice of the competition designs. These nearly fill the West Gallery: and they extend also into the Great Gallery: though, as usual, the designs from each competition form but a small proportion of the number prepared and submitted originally in the particular case, and scarcely any design is explained by an adequate number of drawings. The omission of information in the catalogue, or in the galleries, as to the nature of the problem which competitors had to solve, remains as it has been. We cannot think there would be much difficulty in procuring the plans of ground, and the particulars issued by committees, and in suspending them with the drawings.

Left to our resources, we are able to call to mind as to the Liverpool Exchange, that the old building enclosed on three sides a large area known as "The Flags," the fourth side being nearly filled by the rear-front of the Town-hall. This area doubtless had associations which it was desired to preserve. In the centre of the quadrangle is Westmacott's great work, the Nelson Monument. Looking from the site of the Town-hall, which building is not shown in any of the drawings, the portion of ground which is to the right, between "the flags" and the next street on that side, is considerably less in breadth than the ground on the opposite side of "the flags" similarly bounded on the left. Opposite the point of observation named, or in the centre of the recessed front, a way through to the street at the back had to be maintained.

The contrast between the breadths of the end-fronts of the wings, has been met very differently in the arrangement decoratively of designs. Some of the competitors make the two ends almost entirely different; others keep the features as much as possible the same, but inserting an additional number of them in the wider front; whilst others, we think rightly, take the narrow front as the datum, and repeating it opposite, then make, on that side, the breadth which is equal to the difference between the wide front and the narrow one, a mere adjunct, very plainly treated. In the broader wing is placed the News-room, in all the designs, so far as we can see.

The drawings exhibited, with some few exceptions, are views of the News-room and of the exterior. Nearly all the latter give curious lessons as to "what to avoid" in perspective, and afford proof of that which we have occasionally had to insist upon, namely that perspective is in several respects unequal to the representation of a building as it is really seen. In every case where the lines of the end-fronts of the wings in the drawings before us, are represented tending to a vanishing point out of the picture, and the lines of the side-fronts to a point in the picture, one wing appears to be obtuse-angled instead of right-angled. In one drawing, where the end of one wing seems to have been treated in parallel perspective, and that of the other with the similar lines vanishing, the defect is even more glaring. We have seen some curious *tours de force*; and he who well understands perspective, may produce a valuable illustrative representation, whilst going against seemingly fundamental laws. We recollect ourselves giving a view of the quadrangle of the Old British Museum, in which all four sides were shown, as they could not be seen with the eye fixed. But generally, several drawings are required to represent according to rules of perspective, the appearance of such a building as the Liverpool Exchange. The only kind of drawing that will suffice singly, is one in parallel perspective; and that one will not convey the real effect from a near point of view, unless it be observed with the eye fixed to a point corresponding with that of the actual station, as indeed properly speaking the eye ought to be in the case of every view. But it is time we spoke of the designs severally.

Mr. T. H. Wyatt's design, "Au bon Droit," to which the first premium was awarded, is represented by a view of the exterior (20) and one of the interior of the News-room (21). Taking the last first, it differs from the view in the Architectural Room of the Royal Academy Exhibition lately noticed by us.* In place of plain shafts of coloured marble, the pilasters are enriched with ornament in the lower portion of the shaft, and fluted in the upper portion; the height of the arches between the pilasters being still divided by a gallery. Greater novelty of effect thus results; though there is a popular feeling which would be in favour of the plain shafts in the case of buildings for commercial uses. The flat, or merely panelled, portion of the ceiling is plain as compared with the decoration of the walls and arcades; thus, the circular lights are somewhat like mere holes cut through the ceiling. In the exterior, the treatment of the wings is not that for which we have expressed preference. But in each, there is an effective combination of dormers with a balustrade. In the wider front, centrally, one of the dormers is expanded in width and finished with a curved pediment. The centre of the recessed front is arranged as a pavilion. The general character is French Italian. Superimposed orders in the principal stories, and good rustication with arch-headed windows in the ground-story, are the chief decorative features.

The design, "Nobis Bene Nemine Male," by Mr. W. Parnell, which received the second premium, is represented by a view of the exterior (35), and one of the News-room (40). The latter drawing shows an interior, with a dome carried by four arches and pendentives, and having the lower part of the vault pierced by lunettes for light. One of the arches in the front of the picture is open, apparently connecting the square part of the plan with some other portion of the News-room: the three others are filled to the springing, with an order; and above this is a semicircular window. The whole is inferior to some other designs making use of a domical vault. Comparison of all these designs is instructive. In the exterior of Mr. Parnell's design, though the wings are not symmetrical, there is clever treatment of large window-surface with narrow piers. The openings are generally square or segmental-headed, or excepting in the attic. The ground story has pilasters to the piers; the two stories next, have one large order and two superimposed orders. In the recessed front, a centre is carried up a fifth story, and is flanked by small pavilions, or turrets, which are finished by domical or ogival roofing. Stone domical cappings, and semicircular pediments charged with sculpture, crown various portions of the wing-fronts.

Messrs. Cunningham & Audsley's design ("Labor et Honor"), to which the third premium was awarded, does not impress us altogether favourably from the drawings (37 & 38). In the News-room, the chief feature is a large square ceiling-space having a domical skylight; and the ends of the beams enclosing the space are carried by Corinthian columns. Beyond this portion of the room are columns, about two-thirds the height of the others, but of precisely the same pattern, repeating a fault now too common. The repetition is mere evidence of poverty in invention: Palladio, who devised a combination of large and small orders, would never have fallen into the error here made; and, by the Romans, even pilasters at the back of columns were made different to the columns; that is to say, the shafts were fluted or plain, just reversely to what the shafts of the columns might happen to be. The decorative features of the exterior in this design, are superimposed clustered columns, windows principally arch-headed, pavilions and curved roofs, the general character being as may be supposed, Italian.

The design by Mr. Thomas Allom, "Labor Omnia vincit," is exhibited in several views and sketches, and one or more other drawings, a plan, however, not included. The view of the News-room shows an effective arrangement of columns, piers, and arches, dividing the length into three bays, and each bay, or the width of the room, into a square top-lighted central space and two narrow sideways. Each central inter-column is spanned by an arch; and the columns of the transverse line, or division of the bays, are coupled in the thickness, so as to get a group of four columns on each side the arch, in addition to a pier at the angle of the square. In the centre of the group, sculpture is placed. In the exterior of the building, the right-hand wing, and a portion of the left-hand wing corresponding in breadth, are repetitions of one another. The general features of the exterior include a basement wherein the piers are treated as shell-headed niches ranging with the windows as an arcade, an order to the second and third stories,—the centre of each front to the quadrangle being arranged as a loggia with the columns coupled at the angles,—a small order to the windows of the second story, and windows in the frieze of the main order.

The question of merit of the result of design of this character, as compared with that from design having greater novelty shown in drawings, is not to be decided by perspective views, or by any drawings such as are prepared for competitions. In these, much of detail and execution which would go to realization of effect, is not shown, and cannot be: the work which seems "out of the beaten track" has more importance credited to it than it may deserve, or in the absence of a known name of an architect as its designer; the design which seems to make the larger use of models, is judged forgettingly of the workmanship not shown, in details that have been arrived at by minute steps of progress after numerous and necessary experiments. We offer these remarks rather for the consideration of those disposed to maintain the competition-system, than as having application to any one design in the Conduit-street Exhibition.

Mr. H. Littler's design, "Absque Labore Nihil" (4 to 6, & No. 39), for the Liverpool building, has an unsymmetrical arrangement of the wings; and the several features of rusticated basement, superimposed orders, French roofs with dormers, and lofty plain tower at one corner of the quadrangle, are not well combined, in the drawings. The News-room is the best

* See pp. 255, 272, *ante*.

* See page 327, *ante*.

part of the design. Its plan is that of "nave and aisles," with the vaulting carried by coupled columns, and arches groining-in, the lighting being through a circle in the centre of each bay.

Mr. R. P. Pullan's design (11 to 13), as the work of one whose name is favourably known, is singularly defective. In considering the News-room designed, the first question would be, could the supports shown, which are mere columns and thin radiating walls, be sufficient for the support of a dome? But the arrangement of the attic and pediments, and that of elliptic arches over semicircular arches; the filling-in of the windows; and all the main proportions and the details, want the requisites of design. In the exterior, there are pilasters enclosing the height of three stories; whilst the only part of the work that could be tolerated, the group of turrets in the centre of the recessed front, is spoiled by the manner of introduction of an arch, which there is to the middle inter-column, below a pediment.

In the design by Mr. J. Johnston (14 to 16), for the News-room, a square space with four recesses and arches, is domed over from pendentives: these carry a gallery; whilst the dome itself has windows at the springing, and is pierced with hexagonal lights. In the exterior of the building, the wings are not symmetrical. Generally, the fronts, which are many-windowed, are of French-Italian character, having pavilion roofs; whilst the details include windows with quadrant corners to the heads, and chamfered lintels, and others with small shafts.

In the design with the motto "Sine Favore Nil" by Mr. W. J. Green (17 to 19) the arrangement of the News-room is also that of the square plan with recesses, arches, pendentives, and dome; but the dome, which is formed with glazed coffers, is carried by an attic or low tambour having pilasters and panels for paintings; and this latter feature is carried by four segmental arches of very slight rise. Thus, the pendentives give peculiar character to the interior; and much contrivance structurally would seem to be required. Below the segmental arch are an order, and a semicircular arch to the central intercolumn: some of the columns are coupled, and the spandrel spaces between the order and the segmental arch are enriched with sculpture. The features of the exterior are excellent, by reason of the solidity of effect, combined with apparently ample provision for lighting, and by the grouping and the variety. Broad, picturesquely-vaned, and turret-crowned angles; a ground story, with arches, columns, and piers, well combined; windows of the second story under arches which themselves enclose semicircular lights; an attic story with triplet windows and dwarf-pilasters; dormers; French roofs; and a central tower, are amongst the features to which we have referred as successfully managed. We mentioned this design in our notice of the Royal Academy Exhibition.

The design by Mr. L. De Ville (22 & 23), "Bursa," has the News-room with the main portion of the ceiling flat, but coffers being inserted, glazed. This space, central, is carried by curved brackets, leaving three bays on each side, whilst an inclined portion of the ceiling at the sides seems to be perforated for ventilation. In each bay are four clerestory lights. This arrangement of clerestory and ceiling is carried by arches, segmental, three on each side. There is much merit in this interior. Externally, the design (which is symmetrical) has not exactly the character which we associate with an Exchange; and it might be called prison-like. The exact cause might be difficult of discovery. There is no prominent order: there are only small columns or pilasters, from which spring the arches of windows, many of which are segmental; whilst the chief decoration of the ground-story is rustication of horizontal lines. Of the four stories, the two upper are of the many-windowed character. The centre of each wing has a low pediment with sculpture, and a high pavilion roof; and in the centre of the recessed front is a tower.

In the design by Messrs. Finch Hill, & Paraire (24, 29, & 30), the drawing of the News-room shows a good interior with Ionic columns, arches, and lunettes, beams and coffers; but the exterior is not pleasing. In the broader wing, a loggia formed with a very small order, is filled in to a recess in the second story; whilst the opposite wing is very different.

The design by Mr. E. Salomons (25 to 28) marked M, has certainly novelty: and it is not all accompanied by the best taste. In the News-room however, as is shown in the drawing, there is merit; which indeed there is elsewhere in the design. The plan of the News-room is that of nave and aisles. The centre division is lighted by a clerestory, and by a lantern-light divided in the length by the principal-ribs. These spring from caryatides, or figures, which are placed between the arches, and rest upon a square entablature which there is to each pier or column. The aisles are ceiled over in quadrant form. So far, description of the design is easy; but it would be more difficult to describe in words the details. In some of these, there are useful hints side-by-side with defects, as for example in the bases of the piers. As to the exterior, where the wings are not symmetrical, it is impossible to describe the details. French-Italian, Gothic and Lombardic, seem to have all contributed something. One prominent feature of the broader wing, as of the News-room, is a large window, semicircular-headed, and filled-in as though with the half of a rose-window in the head, and with three lights under a transom below.

In the design by Messrs. W. & J. Hay (32 & 33) "Dandolo," as to the News-room, a deeply-moulded, heavy, *plafond*, or central ceiling-space, is carried by curved principal-ribs, and these by standards of iron, the whole arrangement forming part of a clerestory and roof combined, and entirely glazed, excepting the *plafond*. The clerestory is carried on arches and columns, separating a low narrow aisle or ambulatory. The exterior, more pleasing than the News-room, is Italian in character, and many-windowed. Superimposed columns to the piers of the two lower stories, carrying a balustrade: above these, a story of arcaded openings; pavilions, and angle-turrets, are the features.

As to the treatment of fronts in which large amount of window-opening is required, there is much to be learned from these Liverpool Exchange designs.

All that is exhibited of Mr. H. B. Garling's design, "Fortiter et Fideliter," is the view (36) of the News-room; so that we should be wrong in coming to any conclusion as to the whole design, from what relates only to a portion of the intended building. However, the view represents not only the finest conception of a domed hall in the Exhibition, but the finest that we are acquainted with. The general arrangement is merely that of the square, with four recesses and semicircular arches and pendentives, carrying a dome with central light; but the manner in which the recesses are filled-in with small arcades and circles, the arch-soffits and the vault are coffered, the main divisions are proportioned, and the ornament is applied and relieved, combines to produce an effect that is worthy of unusual admiration; and of which we regret not to contemplate the immediate realization.

A design by Mr. C. Brodrick, "Fides," for the same building, but not mentioned in the catalogue, will be found in the rooms. The News-room has a ceiling with deep circular coffers, and with a cove into which the arches of the window-heads are groined. The wall-decoration is made up of two tiers of arches, springing from piers, and some of them forming the windows, which are filled in with decorative shafts, and transoms of metal-work. The tiers of arches are separated by a balcony. Externally the design is treaded in two stories; each pier between windows being formed as a cluster of three columns. The angle-blocks and centre are carried up each an additional story, and crowned by roofs of the Louvre character.

The competition for the Albert Memorial is represented by the designs of Mr. M. D. Wyatt and Mr. P. C. Hardwick. Some of the drawings illustrating the latter design, were mentioned by us as in the Exhibition of the Royal Academy. The drawings in the Conduit-street Exhibition (51 to 53), under Mr. Hardwick's name, show several alternatives for the treatment of the statue and pedestal, and that of the terraces. Amongst them appears an equestrian statue. There is much good design in the decorative features of the terraces and the accessories; but the big niches in one of the drawings are less satisfactory to us than those in another, where the niche is the background to a group of sculpture. The fountain, the subject of a separate drawing, with supports of small columns, and figures including personifications of Architecture, Sculpture, and Painting, is beautifully designed. Mr. Wyatt's designs (13 to 19) include one for the Memorial "in a Classic style," a "Mediæval Fountain of National Science and Classical Fountain of National Art," a view of the "A... Institute, Piazza, and surrounding building... a Classic style," &c.; a view of a similar de... but in the Mediæval style; a view showing... SANITARY SHORT-COMINGS IN HOLBOR... AND ISLINGTON.

Just now, as is the case in some other of th... metropolitan parishes, the Holborn district i... suffering from an excessive rate of sickness an... death. At a meeting of the local Board of Work... the medical officer, Dr. Gibbon, reported tha... there had been sixty-three deaths in the distric... during the fortnight preceding, against a... average in the corresponding fortnight for te... years of fifty and a-half. There had been ... hundred and seventy fresh cases of sickness,...

* To be continued.

† It is curious to note the variation of the death rate f... various portions of the metropolis. Now that it is so hig... in some situations, Dr. Letheby remarks on the declin... in this respect in City districts.

against an average of 146. Dr. Gibbon said that the increase was due to an epidemic of measles, the dryness of the weather causing liability to such epidemics. In the course of his remarks, Dr. Gibbon reminded the Board, that some six months ago attention was drawn to the fact, that the poor living down the courts and alleys of Holborn were often entirely without water on Sundays, in consequence of the tanks and water-butts being too small for the supply of so many people as live in those warrens. (We said this a dozen years ago.) The New River Company agreed to give a Saturday evening supply for six months, in order to allow time for larger butts or tanks to be made; and this period being now expired, the supply was withdrawn. Dr. Gibbon said that during the six months many landlords had been prevailed upon to enlarge their tanks. And this was necessary; for the houses which were made for one family were now occupied by from four to ten families, and the water intended for one family could not be made sufficient for so many.

Several of the landlords have expressed their willingness to lessen the number of the lodgers rather than supply larger tanks; but, the doctor added, this decrease would only last perhaps a week, and the misery would then be as great as ever. The chairman and some of the members of the Board expressed their obligations to the New River Company for what had been done, and it was resolved that the company should be solicited to continue the great boon of a Saturday evening supply. If, however, the company should do so, we are sure that if proper receptacles be not provided there will still be a cry for water in the Holborn alleys,—not only on Sundays, but during the week. Again and again we have urged the necessity for active measures in connexion with the water supply of tenemented houses. Our readers know that unless water be constantly at hand for general use in those crowded neighbourhoods, the poor people will fail to obtain what is needful for the purposes of cleanliness and health. The proper supply of water to houses which are let to so many families, is the duty of the landlords, who can be compelled by the parish boards of health to enforce the provision of water in sufficient quantity for the population to whom they let their premises. After all, then, it is the parish authorities who are in a chief measure to blame for not using, with energy, the powers which they at present have.

The excessive overcrowding that prevails might also be lessened by the same means: it is surprising how much this important matter seems to be overlooked. In connexion with this, Dr. Gibbon remarks, that immediate proceedings should be taken against the keeper of a lodging-house in Verulam-street, for over-crowding. The case was, that in a room 10 feet square, there were three beds, and ten persons slept in them. The Chairman expressed his utter disgust that *such things could be*. It was resolved that proceedings should be taken, and indignation was expressed by some of the members of the Board, that the magistrates in cases of conviction did not exact greater penalties than they usually do; and so one class of officials endeavours to cast blame upon others, without each in his way endeavouring to discover the extent of the evil which needs removal, and endeavouring to the utmost of his ability to effect improvement. In the Holborn district alone there will be found a multitude of apartments which are as small and over-populated as that referred to, and the same may be said of other quarters; for instance, a coroner's inquest* has been held on the body of a woman named Mary Fox, aged 43, the wife of a turf-cutter, who lately resided at 3, Mildmay-avenue, near Mildmay-park, Islington. She was admitted into the St. Luke's Lying-in Hospital, to be confined, and died of typhus in eleven days. Dr. Harris, physician to the hospital, said that the deceased had the fever when she entered the hospital, and he was of opinion that over-crowding and impure air had generated the disease. We know well the condition of the place, and had foretold to the landlord what would be the result.

After a long deliberation the jury agreed to the following verdict, "That the deceased died from typhus fever, and the jurors find that very great blame is due to Mr. Smith, the landlord of the house in which she lived, for over-crowding, and the want of ventilation, drainage, and other sanitary arrangements, by which, in the opinion of the said jurors, the death of the deceased was caused."

Some attention is called for in the neighbourhood of Caledonia-crescent, situate near the south end of the Caledonian-road, not far from the Underground Railway station at King's Cross. The houses are substantially built, and are of no great age. They have also a neat external appearance. The pavement of this thoroughfare has the same level as the Caledonian-road, but between the Crescent and North-street, which has the same level, there is an open space, in which there are several large trees, that, before the building operations were commenced here, must have been conspicuous objects. At the time when this ground was first surrounded on all sides by houses the parts behind each were, no doubt, laid out as gardens; but when we find that this back space is about 8 feet or 9 feet below the roadways, and that most of the dwellings which surround it are tall, it is no wonder that the labours of the floriculturist soon ceased to be of use. Now the plots are in some instances turned into poultry-yards; in others tanks have been dug and lined with cement or pottery, in which ducks are kept,—without advantage, by the way, to the night's rest of the neighbours. There are also rabbit-hutches on an extensive scale, dormers for pigeons, and so on. Here in the sharp winter weather stray birds come from the fields and woods; and in the spring time the noise of hundreds of London sparrows is almost deafening. In Caledonia-crescent there is a dense population, and it unfortunately happens that, particularly on the north side, the drainage is imperfect. In certain instances the drains are only sufficient to carry off the surface water from the cesspools, although we believe that the drain in the street is sufficient for every useful purpose. There are untrapped sinks at the backs and fronts of the houses, and in some cases the closet drains pass through or before several houses. In one we could name, there is a meeting of these drains, and in it there has been a large amount of sickness if not death; while generally throughout this place the attendance of medical men is far too much in request, and it would be found that the death-rate is much higher than it ought to be. Nor is the water supply sufficient for the number of people who occupy these premises: this, however, is not the fault of the New River Company, but the consequence of the want of a sufficient supply of cisterns and water-butts, which ought to be provided by the landlords. This street, as we have already said, requires inspection, and each house-drain should be made to communicate with the sewer. The sinks and closets should be properly trapped; indeed, an attempt has been made to carry this out. But it appears that one part of the street is in Clerkenwell, and the other in Islington, and it is not easy to say where one begins and the other ends. This instance of a metropolitan debateable land has even very recently stopped improvement; and besides other troubles in connexion with parish medical attendance, the removal of the dust causes much trouble. As regards the general health of the inhabitants of this part, it is very desirable that the medical officers of the two parishes should hold a meeting, ascertain the exact position of their respective charges, and then each with vigour enforce the sanitary laws in their respective districts. There are some back slums near here, too, which should not be neglected.

* The practice of holding inquests on the bodies of those who have died from fevers, and in consequence of sanitary neglect, is extending, and has already been the means of doing much good; it has led to the public attention being directed to dangerous spots which might otherwise have escaped notice.

LECTURES ON THE SOUTH KENSINGTON MUSEUM. More than once we have expressed desire that lectures should be given in the South Kensington Museum illustrative of its contents. We are of course glad, therefore, to see a series advertised having that object in view. The first, to be given on the 30th of May, is on "Terra-cotta and Luca Della Robbia Ware," by the Rev. Dr. Rock, and will be succeeded by others "On the Specimens of Ancient, Mediæval, and Modern Decorative Sculpture in the Museum," "Objects of Oriental Decoration, and their Application to Modern Uses," "Specimens of Bookbinding," "Architectural Specimens of Coloured and other External Decorations," "The Exhibition of Modern Stained Glass, and its Suggestions," and "The Decorations of Raffaelle's Loggie in the Vatican." The cost of admission is little more than nominal.

GLASS-PAINTING IN CONNEXION WITH ARCHITECTURE.*

SELF-RESPECT, as well as respect for your Society, would forbid my occupying the place of your lecturer for a single hour, if I had not something to say which I hoped might advance a cause in which we are all interested. But how can this be? You do not come to unprofessional lecturers to learn anything of art processes. Of this they have acquired no greater knowledge than is just sufficient to ensure their sympathy with you in the labours of your several callings. But there is a certain kind of knowledge, even of the most mysterious handicrafts, which is equally open to the initiated and to the uninitiated. The power of producing, and the power of appreciating, objects of art, are very separable in theory, and are, in fact, often widely separated. The view from without, the view from within, must necessarily be different, even when both are essentially true; and, perhaps, the view from without may, in some cases, be the most important. To know oneself is proverbially a hard, as well as an important matter; and reasons parallel with those which keep one in ignorance of one's own character and just pretensions may keep producers blind to some defects in their productions which are abundantly apparent to consumers, or even to disinterested observers. And so the most cunning masters of an art may collect valuable hints from the most uninformed.

And perhaps the art of painting glass may be rather more indebted to unprofessional persons than most others. His is not the only name that occurs to me, but it is, even alone, equal to a multitude. The greatest adepts of the art will not hesitate to confess how much it has been indebted, both for what advance it has made in fact, and in public estimation, to the unwearied exertions of Mr. Winston. It is partly through the efforts of unprofessional allies that we are able to look back with some complacency on the time when Sir Joshua Reynolds and Benjamin West submitted to see their designs done on glass by Egginton or Pearson, and when such productions were so carefully tended that the guns on the round tower at Windsor were not allowed to peal their welcome to the union of the crowns of Great Britain and Ireland, lest the new glass in the east window of St. George's Chapel, to which the old tracery had already been sacrificed, should be shaken to pieces—an indulgence which the old window would have spurned, as we may learn from the present state of the glass throughout York Minster, after two fires; one of which swept away every vestige of combustible material from the choir; and the other destroyed the whole of the nave roof, with no damage to the glass but that which is experienced at the hands of the firemen, thrusting their engine pipes through the windows.

And thus I approach the special subject of my lecture, "Glass Painting in connexion with Architecture." And here I must make an explanation which will, I fear, tax your indulgence very largely. My lecture has no reference whatever to the exhibition of painted glass just opened. Indeed, a week ago I did not know of its existence. Had I known of it in time to influence my decision, I should not have been here now; for I should have felt that the existence of such an exhibition would involve the necessity of some critical or descriptive review of its contents, and I should have shrunk from the responsibility of such a notice. This task ought certainly to be undertaken by some one who is *au courant* of the present statistics of the art, and whose acknowledged reputation would give force and value to his criticisms and suggestions. As I cannot aspire to any such knowledge or reputation, I have thought it better to postpone my visit to the exhibition till I have said my say. I must trust to the simple truth of my principles to bear me out substantially, I hope, on the whole, though some separate propositions may be shaken by what are already facts to most of you, but which, at least till to-morrow, must be hidden from me behind the veil of futurity.

So much, by way of apology, about myself. And now, accepting the title of your society as fairly descriptive of its objects and associates, I shall speak as to practical men assembled for practical purposes. And if any of you should be directly and specially interested in any particu-

* By the Rev. G. A. Poole, M.A. Read at the Architectural Museum, as elsewhere mentioned.

lar subject, either as it concerns the making of glass for painted windows, or the painting it, or the employment of it as an architectural decoration, I hope you will not spend an hour with me unprofitably.

Of course you will not come to me for any exposition of the technicalities of glass-making or glass-painting; but you may not object to treat it as a matter for friendly discussion,—how far we have hitherto satisfied, or are on the way to satisfy, the reasonable demands of an educated eye. In doing this you will not sacrifice the higher position which you occupy from your exclusive knowledge of the processes of your handicraft, and from the habit of applying in practice rules of art criticism which to me are in comparison vague and disembodied fancies.

There is, besides, a question,—a most practical, and to you a vital question, which can only be fairly discussed with an "outsider,"—in what estimation is the painted glass of the present day to be held by the public? They, too, may be as ignorant as I am; but, no matter! their judgment is not the less important to you. Take me then, if you please, for this one night as your *foolometer*. Such an instrument would be cheaply purchased at the wages of another skilled workman in every establishment in the kingdom, from the privy council downwards.

And what will you read in the index of that unhonoured but not therefore unimportant instrument? Just this, that, in spite of the enormous demand for painted glass for many years past, there is now a growing dissatisfaction at the quality of painted windows.

I can tell you that a notion is gaining ground that all that has yet been done in this way, and all that is a-doing, will be regretted before long; and that, as we are now destroying without remorse the costly galleries, sounding-boards, high pews, and other churchwarden's work of the last century (all, remember, most admirable in intention), we shall shortly set to work to destroy the painted windows of the present day. You will say that this is not very complimentary, yet there is a sense in which it is not unfriendly. Tindal thanked the bishops for buying up and burning the copies of his first translation of the Bible; but then he knew that he could supply their place with a better article. Is this your case? With what confidence do you look to your power to produce better windows when the present are condemned? If there had been no Wedgwood, we must still have used the atrocious pots and pans of the last generation, because, good or bad, pots and pans we must have; but painted windows are no way essential to our happiness or well-being,—the demand must be kept up by a degree of merit sufficient to arrest even the caprice of each succeeding generation.

Now, although I shall altogether avoid archæological questions, yet, in order to estimate the hold of glass painting on the popular mind, I must show, what indeed will scarcely be denied, that the great favour which painted glass has found of late years has been due to adventitious circumstances. Its use was brought in in a full tide of Mediævalism, together with Gothic architecture and other sister arts; and it has followed Gothic architecture, I fear it must be confessed, with lame and lagging steps.

It was painfully evident from the first, that the effects of our new flaring saints—in large dabs of red and green, and blue and yellow—were not to be compared with that of an old window, even of the most meagre pretensions; and, unhappily the first step that was made to obtain better results was a bad step, for it was a step not of true but of bastard Mediævalism. An attempt was made to imitate the effects of age—the dirty footprints of old Time, and the ugly strokes of his scythe, without the slightest reference to the stuff on which he had operated. Surface smearings of enamel, or even, if I mistake not, of dirty varnish, rubbed on after the glass was executed, were made to imitate the stains upon old glass; and even the "pin-holes" of incipient decay were imitated with brown dots and blots. I suppose that, except in cases of conscious imposition, as with manufacturers of new-old furniture, and coins and paintings, and jaw-bones (where the process is carried to the legitimate or illegitimate extent) no such attempt was ever made, before or since, to mock the effects of age and decay, as if it was nothing but a process of disintegration that gave beauty to antique art.

But let us lay the burden on the right back. It is not the painters so much as the glass itself that is in fault; and if these antiquations have failed to cover the defects of the glass, they have failed because it was impossible that they should succeed. The mistake of the painter was to expend his time and ingenuity on what he ought to have known would never repay him. I venture to say, that if the glazier who put up the gorgeous windows of King's College Chapel had had our modern glass to work with, his labour, together with all the subsequent effects of time and decay, would have utterly failed to produce any tolerable effect. The exuberance of this old window is due to the glass, to the very substance of the glass itself, as it came under the painter's hands, or rather as it came out of the kiln in which he himself had set it: for no doubt in old times the glass was made not merely in the same workshop, but by the very same person who afterwards painted it; and I doubt whether we shall make much progress in the right direction, until this is, at least sometimes, the case again. At all events, we shall look most hopefully for help to those establishments where both processes are carried on under the same general management, though not of course by the same hands; and where the maker can take counsel with the painter of the glass, and (which is more important still) where the prosperity of the whole concern depends on the success of both departments.

I venture to hope that I have given a plain answer to this question at least,—Is the inferiority of new to ancient glass, in the glass itself, or in the pointing of it; in the pot metal, or in the after handling? It is clearly in the pot metal principally, and to such an extent that all the skill in the world would be hopelessly expended in painting on modern glass of ordinary character.

But, if the fault be in the glass itself, is it in its colour, whether purity, or brilliancy, or intensity, or is it in the tone of the glass? I shall make very little way with the rest of my argument if I do not carry you with me in my answer to this question,—that the fatal defect is in the tone, and not in the colour. I am quite aware that the general voice is against me; but so much the more must I insist on the truth of this assertion. The general voice is, "The old glass is so much richer, so much deeper in colour." I deny this entirely. I say that our modern colours are generally far more brilliant, and are often and easily attained of a much more intense hue than was common with old glass. And, paradoxical though it may seem, I say so much the worse. The aim at producing effect by brilliant and deep colours has been absolutely injurious,—fatal. It has filled our windows with patches of rose colour, of painful brightness and intensity. It is not at all uncommon to see a single piece of blue in a modern window, sufficiently fierce in colour to kill the whole painting, if it were ever so good; and where, in old glass, we should probably find a light bluish gray. So, again, with darkness of colour, we have reds, purples, and blues almost black with the abundance of colouring matter. Such depth and darkness may, I admit, be sometimes found in old glass, but not, as a rule, to the same extent as in modern. The depth of old glass is far more depth of tone than depth of colour, and that depth of tone is as much due, in the blues and rubies, to the texture of the glass, as distinguished from its colouring matter, as it is in the whites and grays.

As for positive colour, it would be a great step to reverse the process, which for a while at least was aimed at, and to pitch all the colours and their gradations in a very much lower key, relying on the texture of the glass to give that atmospheric effect which alone is worthy to be called depth and richness.

The superiority of the old glass is, then, in tone, not in colour. But tone, though readily distinguished from colour, may be the result of some cunning blending of colours; as it is, for instance, in a water-colour drawing on smooth white paper; but it may also be due in the drawing to the texture and first tint of the paper, and in glass to the texture of the material itself. And this is, in fact, the case with the tone of old glass. It is due to the texture of the glass, quite distinct from its colour. And what is it in the texture which has this magical effect? This question will be best answered by stating what are the causes of this peculiarity of texture, and these are, to speak broadly, original, imperfect vitrification, and subsequent devitrification, decay in process of time. From these causes result that imperfect transparency, and also that opalesque iridescence, which we now see in old glass, and which we long to see restored.

How imperfect vitrification makes glass less transparent is too obvious to be explained; but how it renders it opalesque and iridescent is another question. Where there is imperfect [illegible] unequal fusion, the light is transmitted through several planes of unequally refracting power, [illegible] is of course at every change of substance which it encounters partially decomposed. It passes in fact, through a succession of prisms; and the result is analogous to that of the greater thickness of atmosphere, and its greater inequality, through which the rays of the sun have to make their way in the morning and evening, to which we owe the beauty of our dawn and sunset. Again, it is too obvious to need explanation how the effects of time diminish the transparency of glass, and why in certain cases they render it altogether opaque. But how glass becomes opalesque and iridescent in the course of ages is another question. The reason is that the surface becomes laminated in the process of decay. Professor Henslow, in describing certain glass vessels discovered in ancient Roman tumuli,* says:—"The manner in which the glass disintegrates is by peeling off in small filmy scales thinner than the finest gold leaf, or even than a soap-bubble; and a puff of the breath scatters them through the air in innumerable spangles glittering with the colours of the rainbow." This process was of course hastened, in the case described by the Professor, by the influences to which the glass was subjected; but it is going on slowly wherever disintegration has commenced on the surface of the glass.

Now, you will observe that neither the imperfect vitrification nor this peculiar disintegration can be said to have been produced by old glass painters consciously and intentionally. Again, the first, I doubt not that the old glaziers struggled, for it was an obvious imperfection in their glass, simply as glass; and as for the iridescence of decay, they scarcely saw it yet in a remarkable degree, for it is a very slow process, and, besides, to produce it was beyond their power.

We have, therefore, no indication of any scientific or artistic process by which the excellence of the old glass was, in fact, attained. But are we directed to the means by which it may now be attained, and ought to be sought? Ought we to resort to imperfect vitrification? ought we, if possible, to hasten the process of decay to gain our own ends? I think not, for these reasons. Imperfect vitrification must diminish the durability of theglass; and, besides, although it gives one very valuable result, it is destructive of the chief characteristic of glass, its translucency. In therefore, we use this means with our glass, we ought to do it with eyes open to the consequences and on a fair balance of losses and gains. In however, no other course were open to us, but either to retain our present miserable materials or to revert to imperfectly vitrified glass, I think there can be no doubt which we ought to choose.

As for the devitrification due to age, even supposing that it could be produced by artificial means, it would be wrong to employ it. It must be wrong on every account to anticipate decay and to hasten its progress. All the highest instincts of our nature rebel against the process of decay and dissolution in ourselves and in our productions and belongings, in all that we are and all that we have and all that we value. But surely we shall none of us admit that the fact that old glass owes part of its beauty to age, and part of it to an actual defect which we will not imitate—we shall none of us admit that fact to be a sufficient apology for not seeking some way of producing the same beauties, or greater, in our modern windows. To attempt to make old glass would be absurd; but to apply all the resources of art, and to call in the assistance of men versed in all science, to the production of a material as good as the old, and better, is a very different thing.

Let us have, if possible (and what is not possible?), let us have glass that shall combine all the good qualities which the old has acquired by age with those which age must always diminish and gradually destroy. It does not much matter whether we call this imitation or not. I should rather call it emulation; but, any way, we set a pattern before us, and are not content till, by some means or other, we have done as well. How is the same principle carried out in painting? No student copies the actual stains and cracks, and injuries of any kind on the face of an ancient canvas; but he does copy as it is—in its more beautiful state—a painting rendered more exquisite by age: he aims at, and in

* Professor Henslow's account of Roman Antiquities found at Ringham, near Bury St. Edmund's.

degree attains, the incommunicable results of antiquity: he feels after them at heart, and in proportion to the measure of his own genius, he grasps them: he works up to the exalted pattern till one may say his own palette has the elements of a tone upon it which represents the beauties of age without its deformity, its ripeness without its wrinkles, and which is thenceforth infused into every work he executes. This is the benefit which an individual artist, or a school of art, acquires from the study of the old masters.

When, therefore, the glass-painter tells me that his window is not, in respect of tone, as good as the old, simply because it is new, I feel entitled to ask, has any effort been made to tone the glass as well as age can tone it, though by a different process? Antiquation, I suppose, we have all learned to despise; but has a mellow tone running through all the colours, the whites and the greys especially, ever been attempted in the making of the glass? And if not, why not? As for any toning on the surface it is not within the reach of art; nor is it attempted, except by means which either defeat the end or stand as a confession of an intolerable defeat. Of attempts to tone with brown enamel I shall speak by and by, and to use a surface varnish which is only asked to do the work of age till it is itself destroyed is, it seems to me, an unworthy device, and a confession of impotence. The required effect must be due to the inherent qualities of the glass itself; and if glass-painting were less of a trade and more of an art—I mean a fine art,—or if, being a trade, it were felt it could hold its own only by mastering this difficulty, pot-metal would not long continue in its present raw state.

I venture to think that there are analogous cases in other arts and sciences to encourage and even to direct our energies. The very words, "crystallization of iron," are full of suggestions, especially if taken in connexion with malleable glass, which may seem to be their correlative and opposite. What difference is there between crude iron, cast iron, soft steel, and soft iron, except in the intimate condition of their several particles? and yet all these are produced out of the same lump by the one process of Bessemer, in its several stages. The elder Brunel gave to tinfoil a beautiful prismatic colouring by means of heat applied to it when closely pressed between metal plates, producing just what we want in glass, a crystallization throughout the substance, resulting in iridescent hues. I find that the lead in flint glass may be revived through the substance of the glass in globules by a certain application of heat; which is at least suggestive of internal changes of texture. In short, the more one studies the history of the application of science to the material of art, and of art processes, the more one becomes persuaded that every dream will some day be realized, except the one dream which has led to the realization of so many dreams—the alchemist's dream of the transmutation of metals.

I am tempted to suggest one or two processes, though I am aware how imperfect my practical knowledge must be. But, taking this fact only as a basis—that different kinds of glass are fusible at different degrees of heat—why might not a glass very difficult of fusion be pounded, and submitted to the kiln, together with the materials of a glass very easily fused? It seems to me that this must produce a granulated texture, and as all the component parts would be perfectly vitrified, the translucency would be very considerable. If this were possible, an additional effect might be given by the pounded glass being a shade lighter or darker than the other, which would give the atmospheric effect of stippling with transparent colour.

Another process by which I should certainly, if I had the means, attempt to give a granulated texture to glass, would be to place it in sheets, still only partially cooled, between plates of metal, and then to pass an electric shock from one metallic plate to the other, through the glass. Of course, I am aware that glass is a non-conductor of electricity; but, just for that very reason, a shock sufficiently severe to find its way from plate to plate through the glass, might, I should suspect, so far disintegrate its texture as to produce the effect of an internal crystallisation.

Or supposing, which, however, I am very loth to believe, that we shall be driven back to some method of producing an effect by a change on the surface only, then I would ask the glass-maker to study attentively the appearance of a leaf of the common ice-plant, and to devise some method of producing just such a surface. If both surfaces of the glass were of this texture I cannot help thinking that a great part of the desired effect would be attained, and yet more effectually if, by a process of coating, the two sides were of glass of different degrees of refractive power.

And let me ask, by the way, has not the refractive power of the glass a good deal to do with its effect? Is it not so in other cases as well as in this? Is it not so, for instance, with the glass used in framing a water-colour drawing? Is it not the refractive power which heightens the effects of the shadows, and makes them in the artistic sense of the word more transparent. May not a picture-glass, may not a painted window, be looked upon in some sort as an optical instrument? and the whole power of most optical instruments is due to refraction.

I throw out my questions, not carelessly, I assure you, however unpractical they may seem. I shall be content if they are but suggestive. Nay, I shall be content if they do but serve to show what I want, though they may fail to lead in any way to the satisfaction of this want. But to revert to the change of the surface only of the glass, to which I just now alluded. This, though it has already, in matted glass, done more, I think, than any other attempt at joining windows, cannot be accepted as final, or on the whole desirable, and that, for this reason among others, that it must certainly very much interfere with the use of the pencil. But, any way, do what else we will, do not let us look for tone in the application of enamel to the surface, or even by the introduction of colours into the glass. Colour it is that we want; but it is prismatic, not fixed colour; colour that we have divers means of producing in other cases, and why not here?—the colour which paints the soap bubble, the colour which tinges the surface of steel marked with infinitely small lines, cut at infinitesimal distances; the colour which it has been a triumph of art to avoid in achromatic glasses. Colouring matter there is none here, and yet there is no such colour, or rather colouring matter; there is, namely, the very light itself dissolved, and held in solution, and therefore there is no such colour. Just so the dew-drops which sparkle many-coloured on the grass, are still the same pure, white, limpid globules, though all the tints of the rainbow are dancing within and around them.

Let us only catch the rays of light, and bend them to our purpose, and all colours will be toned by their own influence, each in its way and degree—the grey or white glass first and most, and all the rest in company and harmony with it. So the light of heaven will be our chief ally, instead of being now our greatest difficulty. Every fresh sunbeam as it comes will dissolve itself in our glass, and diffuse itself through its substance, and thus, carrying through it a new influence, like another and a fairer picture overlying the work of the craftsman, will leave it another, yet the same, neither dimmed nor decayed, but glorified.

One of the most important results of the step which I have indicated—that is, the making of tone *in the substance and texture of the glass*, not *in colouring matter*, nor in *external applications*,—will be the raising of white or grisaille glass to its proper place in the scale of colours. At present it is far less used than it was when the glass-painter was most perfect in his art; viz., in the close of the fifteenth and in the sixteenth century; and where it is used it is disfigured by attempts to destroy its intolerable glare and poverty. And what a picture of toning! You may tone red, yellow, and blue; russet, olive, and green;—that particular reddish yellow-brown of the glass-painters' enamel, never. And again, at how great an expense is this done? Even at the expense of that translucency which is the very soul of glass. But give us such glass as I have described, and we require no toning process, we lose no glimmer of light. Our white glass especially is itself lustrous as a solution of sunbeams; indeed, it *is* literally and absolutely a solution of sunbeams, and yet mild and equable in its radiance as the gray of a winter morning.

Again, a better white glass will bring in a larger use of delicate manipulations. Except on white glass, tender pencilling would be thrown away; but I need not tell you how delicate, how almost microscopic, in their finish are some of the heads in our old windows; and you will call to mind numberless figures of great beauty where the whole effect, even of the drapery, is due to the finish of the pencil, aided only with a little yellow stain, perhaps in the hair and on the diapers of the robes.

Again, let me ask you to realize the effect of a white glass such as I have described, in toning and harmonizing other colours. One of the great miseries of our modern windows is the indecent self-assertion of the colours. Every bit of green, red, blue, and yellow stands out as boldly as if it thought that the whole effect of the window was due to itself alone. Nothing is melted into anything else. The light thrown upon the pavement (which you must remember is just the same as that thrown on our eye) is cut up into as well-defined patches as the glazier's form paper on which he arranged the window. Repose there is none, harmony there is none. A larger portion of white such as I ask for would give both, especially since we must have a similar change in the texture of all the glass.

At present I have spoken of the painted window without reference to anything with which it is necessarily associated. But now let us see whether we do not really need some change in our glass for the sake of our buildings. We have adopted pretty generally the geometrical style of Gothic architecture, in which the windows are neither very large nor very numerous. We want, therefore, the most lustrous glass we can have; and if with rather less colour than usual so much the better. Indeed, it is simply a matter of fact, that there is often a want of light in modern churches even though there is no painted glass at all. It is true that the "dim religious light" is affected by some persons, and they perhaps, as a rule, of the most cultivated tastes: but a healthy robust eye desires a great deal of diffused light, though it turns away with the instinct of self-preservation from a direct transmitted light; and in the matter of churches and other public buildings we ought certainly to consult the profit, and to some extent even the taste, of the many rather than of the few.

Again, the architect will be thankful for such a change in our glass, for the influence that it will have on the effect of his interiors. How is it possible really to appreciate the forms by which we are surrounded, if our eyes are tortured by the glare and gaudy unsubdued colour of our transparent and unmitigated coloured windows? We want a diffused mellowed glow, not streams of stained sunlight. We want

"The soft radiance and collateral light,"

to act like a healing collyrium on the eye tired with the glare of day, and yet not prepared at once for a low degree of illumination.

And when we call in the sculptor, and the artist also, to our consultation, we find the case only strengthened more and more. The cold severe forms and tone of sculpture require, if anything can, a healthy eye to appreciate them aright; and certainly no eye can be in a healthy state which has looked consciously or unconsciously for a few seconds on a modern painted window. Only try it. I suppose all eyes are not in such matters equally sensitive, but some of you at least, if you will shut your eyes after looking for half a minute at such a window, will see it repeated again in its subjective or complementary colours, indicating the violent effect which it has produced on your optic nerve. You will not experience the same on looking at an old window, or at least not till after a much longer and more intense gaze. You would not find it in such glass as I have proposed. Which, then, will best prepare the eye to appreciate the beauties of a marble statue?

And, if possible, still more with the painter. His time, indeed, is hardly yet come, but come it soon will, to decorate our churches, as he has already decorated some of our greater public buildings, with mural painting: but when he does this, how shall he possibly contend against two effects of our raw unmitigated windows;—the most direct effect being the actual projection of flaring colours upon his picture; the other and more indirect, but not less cruel, the utter inability to compete with the brilliancy of actual light and the obstrusiveness of unmodified colour with which he is brought into forcible rivalry? Either he must give up the contest in utter despair, or he must sacrifice what he knows to be real art, that he may outstare and outflare the vitreous saints that are set over against him. If it were the *merits* of the windows that thus placed his art at a disadvantage it would be all right enough: the most beautiful *ought* to receive the greatest attention, and the truest homage; but unfortunately it is the *faults* and

defects of the window that outrage the beauties of the painting.

But I find myself rapidly approaching a branch of my subject which I shall not venture to enter upon without asking your attention to one or two propositions which will seem paradoxical, but which, nevertheless, will commend themselves to you as equally true and important when they have been well considered. I shall not be unreasonably trespassing on your good-nature, if I state these, nearly in the form that I have before done in a paper read not very long ago to a provincial architectural society.

Windows are not intended to be looked at, or even to be looked through, but to admit light. All windows are for this primarily, though secondarily some windows are to be looked through; but *no* windows, not even painted windows, are meant to be looked at: at all events, church-windows, and all windows into which colour is admissible, are *only* and *solely to admit light*. The great question is, therefore, how do they fulfil this end? And if by colour or any other means the natural light is intended to be modified, then the additional question occurs,—How is the light which they admit modified? Again, the light which a window transmits is not for its own sake, but for the sake of those objects which are to be seen by its light. I might almost say, if you would form a fair estimate of the value of a window (that is, how it fulfils its only, or, at all events, its chief purpose), turn your back upon it. A *picture* is meant *to be looked at*; a window is meant *to throw light upon whatever we look at*. Glass transmits light, in whatever condition, for the sake of other things; and, unless it imparts a pleasing hue to them, its colour is so far useless and mischievous; still more so if it arrogates to itself the attention which belongs to those things for the sake of which it is there; worst of all, if it kills the eye, so that it can never turn away from the window to the picture or carving it would admire, or to the space within which it has to attend to other matters with unruffled nerve. You will hardly admit all this till you have thought it well over, and for that reason I enlarge upon it and set it in different points of view; but when you have admitted it, you will see how important are the conclusions to which it will conduct you. Is not this true? Everything that is pleasant to the eye is viewed by reflected not by transmitted light. No man in his senses ever looked at a window if he could help it. He sits with his back to the window and looks at the picture or statue which reflects its light. He even shuts out all the light which is not reflected from the very object that he is studying; and he is best satisfied when even that object reflects no more light than is just sufficient for the actual definition of its form and colour. Even reflected light, so soon as it becomes actually resplendent, dazzling, destroys instead of revealing colour and form. For this reason it is usual to take some means to dull the surface of such figures in silver or other bright metal, as aspire to be judged and admired as works of art. And, indeed, a highly luminous surface actually refuses to be looked at at all. You may as well try to look at the sun as at its reflection from the surface of a still lake: how, then, should we—nay, sometimes, how *can* we look at a window, even if a picture be painted on it, unless the glass be made so dull that the window is a window no longer except in name?

Now it cannot be denied that if the logical deductions from these premises be pressed to their full extent, they will amount to this, that windows should never be fixtures; for as certainly as windows are *not* intended to be looked at, so certainly pictures *are* intended for nothing but to be looked at. And I suspect that if the question had now to be decided for the first time, by a committee of practical common-sense men—say artists,—it would receive the same answer, both in the case of windows and in the parallel case of porcelain, though by no means for the same reasons. But the answer by which we must abide in both cases has, in fact, been furnished by circumstances, and by the usage of several centuries; and we are therefore forced to accept paintings and pictures in our windows and on our Sèvres vases, and can only use our best efforts to make them as good as possible in spite of difficulties, and even of contradictions.

But we must understand the difficulties and contradictions before we profess to grapple with them: so far as windows are concerned, they resolve themselves pretty nearly into this,—that the transparency and even the translucency, without which a window is no window at all, is fatal to the effect of a picture. And you must not be deceived by the use of the *word* transparency, to express one of the greatest beauties of a picture; for it is not only different from the transparency of glass, but actually inconsistent with it. No picture can be transparent in the sense in which every window is transparent: no window can be transparent in the sense in which a good picture is transparent. In a picture the *shadows* are transparent, the lights opaque: in a window the shadows are opaque and the *lights* transparent. You seem to see *into* the shadows of a good picture: you do actually see *through* the lights of a window painted on modern glass; and, even in old windows, the light is more freely *transmitted* through the lights; whereas, to produce a pictorial effect it ought to be more broadly *reflected from* them.

Now, all this being the case, is it not ridiculous to attempt a picture on our modern transparent glass? Fancy a picture through the light of which trees can be seen waving, birds flying, and rosy-faced schoolboys peeping. But, in truth, you need not fancy it, you may see it any day you please. Thus, *viewed as a picture*, the lights are the difficulty,—the absurdity. But, again, *viewed as a window*, you will find the shadow equally impossible to reduce to artistic beauty and to common sense: they are absolutely obstructive of light; and if a considerable degree of pictorial effect be aimed at; if tone and harmony as well as shadow be sought in the use of opaque enamel, a very large portion of the light which ought to be transmitted is absolutely intercepted. Not only are the shadows without the transparency which they would have in a picture, but they are without the translucency without which they cannot honestly perform their allotted part in a window. And now look at an old window. Let the composition and drawing be as bad as it may, you have still, in tone and harmony of colour, a far better picture,—though, I repeat it, a really good picture in a window is impossible. Though less transparent in the primary physical sense, old glass is much more transparent, in the secondary artistic sense of the word. It is with old glass something as it is with a picture: you see not *through* it, but *into* it; into its depths, into its very substance. Light lives and plays in the glass, as in the onyx and the chrysophrage; and, as in them, it is so subdued that it may be looked at without pain. Now I want to teach our glass to intercept the light in like manner, to play with it, and to transmit it so modified as to be seen with pleasure. And instead of despairing of this object being attained as perfectly as in old glass, I hope to see it attained *more perfectly*, and with *fewer attendant drawbacks*; for I hope to see the translucency far more perfectly retained, while the transparency is quite as perfectly destroyed; and so I hope to see windows more lustrous than the old, and yet much more transparent.

The difference of effect may, however, be partly collected from what must of necessity be the great advantages in point of treatment and manipulation. The white glass, elevated by its tone into the dignity of a colour, would be used much more largely. All the colours, equally toned with the white, would bear to be placed in any connexion with one another, without that quantity of stippling which is now necessary to reduce them to harmony: they would, therefore, retain almost all their translucency. With the very large scale of colours in which we excel the resources of any one old glazier, far more of the light and shade would be produced without opaque shadows than has ever been attempted before. No, without distressing the eyes, we should escape the reproach of having—

> "Windows that obstruct the light;"

and we might even attain to some of the qualities of a good picture.

I have said that I do not mean to press the objections against *pictures of glass* to their full extent; but it is surely wise to give them their due place, and to inquire whether some less ambitious designs are not worthy, in comparison, of more favour than they do in fact receive; or, to express at once the conclusion at which I would arrive, I think we do not give its due place to the *pattern window*. There is no fear of any mischief being done by pressing the claims of pattern windows, however strenuously, for they have a heavy load of indifference to overcome. Let me, then, at once say that a grisaille, with a flowing diaper of leaves and flowers, as is in summer, in the Geometrical style, relieved only with medallions or other devices in colour, seems to me best of all to fulfil the purpose of a window in transmitting a pleasant light, and to bring out, without overtasking it, the true characteristics of glass painting. The window, or rather the group of windows, which I look upon as best fulfilling all the purposes of glass, are the five sisters in York Minster. They are earlier in character and design than the geometrical foliage, but the balance of colour and of grisaille seem to me perfect; always on the assumption that windows do not exist for their own sakes, but for the sake of the building which they light, and the objects which are to be illuminated through them. If *gorgeous colouring* be desirable, then the west window—if a *series of pictures* be most to be commended, then the great east window in the same minster—is far before its more modest companions; but for equable, mellow, unoppressive, wholesome light, the five sisters are unsurpassed. Nor can there be any reason why we should be bound to an implicit imitation of any particular style, or why we should be limited to the appliances of any past age. If stippled be better than smeared, or than hatched shading, let us have it by all means, though our general design be borrowed from the thirteenth century. We will not ask whether the glaziers of that date used the yellow stain, but whether, *if they had known it*, they would have used it, before we feel driven to apologise to them for grafting such an improvement on their work. Our only question need be what was the only question to all the true-hearted artificers of old, what is the *best* process within our reach?—for this we will most assuredly employ. And, following this rule, I would venture to combine the Early English method of introducing colour, in large interlaced patterns, with the geometrical running foliage before mentioned. In estimating the effect of this, you must never forget that I suppose one grisaille to be of that lustrous mellowed character, like pearl or aqua merino, which I have all along insisted upon; and the colours also to be no longer raw and self-asserting, but to be modified equally with the grey by a change in the very substance of the glass: with this I think you would have as *fair a modification* of light, together with as *great a quantity* of it, as you can well desire: and again I say these are the conditions which a window ought to fulfil.

Let me suppose, not a great minster,—that is hardly a practical question as matters now stand,—but a really good church of a fair size, and of such costliness of design as may truly represent wealth and devotion combined. Let it have its high roof with open timbers (a matter immensely important to the windows on account of the depth of shadow which it ensures): let it have its carved pulpit and other furniture, its alabaster font, its altar clothed with fair needlework: let its walls be painted,—how shall I say?—as any Scheffer might have painted them. And now let me ask whether the glare of pictures in the windows, as they are now treated, would harmonize with any part of them? Whether it would not actually kill the most refined of all—the mural paintings? I doubt, indeed (though it is difficult to say how far complaisance may go), whether an artist of already recognized power, with real self-respect, and a proper value for his art, would accept a commission to paint the walls of a church which should be lighted with modern picture windows. How would it be possible for him to *paint up* to the surrounding glare, or to adapt the colours to the light which would be thrown upon it? With what patience would he see a dab of green cast upon the fair forehead of the child whom our Saviour blesses; or a crimson brand upon the steadfast face of the mother of Augustine? Fancy Turner, who studied the effect of the surrounding colours on his own canvas so much as to paint almost the whole of a picture on the varnishing day,—fancy him leaving a picture opposite a window to be painted by-and-by!

True, indeed, these distracting accidents would scarcely be of serious consequence to the painter, if the glass were of that feature which I have endeavoured to describe; but then the glass-painter, if he attempted a picture, would be almost equally at fault. No longer able to destroy, neither would he be able to emulate the works of the artist; for glass is still glass, and can never, as the ground for a picture, equal the wall on which it throws its light. Surely it is the true wisdom of both parties to consult the peculiar aptitudes of their respective processes, and to work in harmony and mutual subjection. That the glass-painter's art should be the principal, and the painter the ancillary, I suppose to

be inconceivable: so, if both cannot paint pictures to their mutual advantage, there can be no doubt which must needs give place.

Given a church, therefore, decorated to the utmost, what should we desire but windows, to the aisles and clerestory at least, of the most perfect patterns in grisaille and colour that could be invented and executed? Such as would neither provoke comparison with pictures nor destroy them; but would most indisputably hold their own proper place, and challenge their own appropriate praise. For the great east window, and for the tower window, I would say let the glass-painter do the best he can to vindicate as high a place as possible for his art. They each of them terminate a vista; and, seen as they are from a distance (which you will observe the side windows never are), the very power of transmitted light and of colour heightened by the direct traces of the sun, which are fatal to true artistic refinement, will ensure them a distinctness and vigour suited to their position.

But even here direct competition with mural painting should be avoided. How is it possible in the design to overcome the disadvantage of a plane divided by mullions and transomes, and of transparent lights and opaque shadows *in the execution?* Here, then, let us work not timidly but advisedly; with figures designed after the method (I mean so far as their adaptation to their purpose and place is concerned) of the advanced Decorated style; of the west window of York, for instance, which I mention again to avoid, if to the purpose, the use of many illustrations. I do not mean,—do not draw better, and paint better, and do everything better *if you can*; but *at least as well*. Adapt the style and subject to the space it has to fill and the purpose it has to serve. And now, if you will, paint in gems; now let the very ground be strewed with rubies, and sapphires, and topazes; now let every leaf be an emerald, and every flower a blazing star; and let the first figure of all be clothed with the sun, and these on either hand be bright with all the brightness of heaven. If the glass be really what it ought to be, you will want no smearing with varnish, no smudging with enamel to tone down and harmonize the whole and every part: colour will not kill colour; no, not though you set them between green and purple, or yellow between green and orange; which, by the way, is the very place which they occupy in the peacock's neck, and in the rainbow. Remember what I said before, and I say again: it is no figure, but an absolute literal fact,—every piece of glass that you use will be a collection of sunbeams. You will say, "He is dreaming!" Be it so. I only wish some one else would dream. I wish the painters of glass and the makers of glass, but especially the latter, would dream too. But, alas! there is little chance of this; or, at least, they will not dream *such* dreams at present. It is an old story that dreams that are worth dreaming come to those to whom the realities of life are less cheering; and so, dreams of *glories to be realized with effort* come not to a glass-painter of enormous orders, and acres of glass supplied and to be supplied; but they must come of spare purses, and perhaps an empty stomach. And yet there is a dream, too, that might come of repletion, but it would not be so pleasant; for it would tell of rivalry, and of another success which may eclipse his own. He might dream that he saw some patient, laborious, half-inspired, half-starved Bernard Palissy, aiming earnestly and toilfully to realize in fact what he had already realized in fancy,—a glass better than any of to-day, or of any age that is past, and destined to work a revolution in the whole system of our windows. He might dream that he saw such a one surrounded by his retorts, his sooty face reddened with the glare of the furnace, the refuse of his unsuccessful experiments thrown behind him, and in his hand, just ready to be cast into the crucible, something, but he will not say what it is,—that is *his* secret, and he who would know it must find it out as he has found it out; but in the dream he is successful this time, and joy and triumph beam in his eyes, and there is no more crime upon his forehead, and he who first laboured in contempt and penury is on his way to kings' palaces.

THE STAINED GLASS EXHIBITION, SOUTH KENSINGTON. The various windows sent by London manufacturers and artists have been set up in the corridors of the courts. We have already devoted so much of our present number to the subject of stained glass, that we cannot do more than mention the fact.

THE ROYAL ACADEMY EXHIBITION.*

As soon as Mr. R. S. Stanhope has learnt the distinction between manner and style, there will be a very fair chance of his becoming better known than he can hope to be by assuming the earlier mistaken notions of others, whose greatest excuse lived and died with their novelty. There may be some amount of considerate respect due to those who originate an extravagant hypothesis so long as they can be proved to have been actuated by praiseworthy motive; but none to the plagiarist who perpetuates or attempts to perpetuate admitted error. All that is good in (33) "Rispah, the Daughter of Aiah," and in his better work (476), "Penelope," is marred by affectation and incongruity; and the more the pity, with much to sacrifice.

Mr. Whistler's "Chinese Lady — Die Lange Lizen" (593), is one of the most remarkable specimens of colour in the collection; but why did he spoil his exquisite view of the Thames in (585) "Wapping," painted with such incomparable force and luminousness, by the introduction of meaningless and ugly figures? Both these productions, with all their eccentricity, exhibit very rare appreciation of colour, and though careless to a fault in drawing and execution, are wonderfully suggestive of reality.

Mrs. E. M. Ward, as usual, is foremost of the lady contributors, and has managed to infuse originality where little expectation of it could exist, and with such time-worn materials as "The Children in the Tower" to evoke it. "The Tower, ay, the Tower" (565) is a triumphant response to the natural inquiry, if the artist really imagined it a likely source of fresh inspiration. The precision and taste with which Mrs. Ward describes the old incident carries a conviction of the worth of eloquence in imparting fresh interest to what everybody knows:—

> "She hath prosperous art
> When she will play with reason and discourse,
> And well she can persuade."

To Miss E. Osborn's somewhat too pretty rendering of pathos (555), "For the last Time," we have already alluded, and need only add that it shows a very marked improvement. In manipulative skill, Miss R. Solomon's pleasing illustration of (502) "Harry Esmond's Welcome at Walcote" is distinguished by nice arrangement and appropriate character. But there are so many works of which the most that can be said is, that they are well painted—and to enumerate them would entail most fatiguing repetition,—that in order to avoid appearing unjust, an acknowledgment of their general excellence may be far preferable to making a selection for particular comment.

In the landscape department there is nothing new to chronicle; so, summarily to conclude our notice, as little remains to be said of such monuments to successful achievement as Messrs. Clarkson Stanfield, R.A., and David Roberts, R.A., have long been regarded. And, though Mr. Creswick, R.A., has a larger picture than usual, there are many who will prefer his cool, quiet, and very charming "Early Morning Home in a Welsh Valley" (14) to his very admirably represented spring aspect (470), "Across the Beck in the North Country;" because the former has poetry in its associative ideas, whilst the other depends entirely upon its realistic qualities; and Mr. E. W. Cooke, R.A., continues to delight the initiated with his sea knowledge in (223) "Scheveling 'Pincks' running to Anchor off Yarmouth," and astonish even the least versant with the mysteries of tides and tackle by the impression of abstract truth he conveys;—they simply reassert themselves as favourites of established notoriety.

The Messrs. Linnell have a reputation of their own too, and (37) "Haymakers," by Mr. J. Linnell, sen., (208) "Banks and Braes," by Mr. W. Linnell, and (275) "Cross Roads," and (342) "Driving Sheep," by Mr. J. T. Linnell, would almost prove that they form a distinct school of themselves, so like each other and so unlike all else besides, excepting that nature which they transcribe in a cypher of their own, the whole secret of which lies only in its use—for comprehensible it must be to all.

Mr. V. Cole's (346) "Decline of Day," curiously elaborated through an intricacy of detail; Mr. G. Sant's very forcible and richly-painted (400) "Bishopston Valley, South Wales;" Mr. S. R. Percy's two North Welsh scenes (411) "Llyn-y-Ddinas," and (121) "On the Llygwy;" Mr. A. W. Williams's (11) "Golden Acres," and Mr. T. Danby's poetical combination of sea and sky in (534) "An Escape;" Mr. G. Mason's (253) "Return from Ploughing;" Mr. E. Courtauld's (269) "Twilight;" Mr. J. W. Oakes's (388) "Poachers;" and Mr. B. W. Leader's (575) "Sunny Afternoon, North Wales;" will, upon examination, sufficiently testify that the character of our landscape-painters is not deteriorating, if there is no great evidence of individual improvement.

* See pp. 325, 348, 371, *ante*.

THE SLIDE-RULE.*

THE slide-rule may be said to deserve a better fate than that which has been its ordinary destiny. It has been accepted as a convenient instrument by men who have used its slide for years without in the least understanding its theoretical principles,—men, for instance, such as those whom the immense expansion of mechanical engineering has often called into positions of trust and responsibility. By its aid, very ignorant men have been able to habitually make calculations, or rather carry out rules, without the dimmest perception of the reasons, and even without understanding the instrument, a part of which they so continually slide to and fro. The result is that many people are almost ashamed to be seen using a slide-rule. And yet, we know that the slide-rule, rightly employed, might be of the greatest daily service—more especially to those who have not the talent for quick mental calculations. In any case the slide-rule is an excellent check on any calculation. The work before us is an application of the slide-rule to navigation, by the author of an excellent "*Hand-book of the Slide-rule*," published some time ago. This particular application of the instrument is scarcely likely to be of great interest to our own readers. As, however, we believe that a more general, while, at the same time, rational use of the slide-rule would be of great benefit, we may perhaps return to the subject.

* "Hand-book of the 'Double' Slide-rule, showing its application to Navigation, including some Remarks on Great Circle Sailing and Variation of the Compass, with useful Astronomical Memoranda." By B. H. Bayley, (late) H.M. India Civil Service. London, Bell & Daldy, 1864.

THE BUILDING TRADES MOVEMENT.

Birmingham.—We are glad to learn that, so far as concerns one important branch of the trade, the strike here is virtually at an end. There is a general resumption of work by the carpenters and joiners, who accept wages independently of any scale. Some are receiving the terms offered by the masters, and some are receiving even more than they recently demanded. The consequence is, that many important works, the progress of which has been stopped for the last few weeks, are now once more fairly in hand, so far as this branch of the trade is concerned.

Liverpool.—A letter from the contractor for the new Fever Hospital has been read at a meeting of the local workhouse committee: the following is an extract:—

> "I am sorry to state that nearly all my joiners (about fifty) have left their work to-day, by order of their trade union, not for any advance of wages (which has been agreed to), but for the purpose of inflicting upon me a penalty of 2s. per man, because of my not agreeing to the advance at the time fixed by the resolution of the club.
>
> I believe every man in my employ this morning was satisfied with his position, but they have been so intimidated by the club this day that they have felt compelled to leave their work.
>
> Under these circumstances I must claim the indulgence of the Vestry as regards the church or the hospital. I can so arrange matters that the latter will not seriously be retarded; but under any circumstances I will not, upon any consideration whatever, accede to the demands of the club, with whom I have of late repeatedly had to contend.
>
> P.S. There are now relays of spies watching my premises and each of the contracts I have in hand, for the purpose of inducing or intimidating men to leave my employ."

The contractor was called in, and expressed his determination to complete the work as early as possible.

St. Helen's.—The journeymen plumbers, glaziers, and painters in St. Helen's, gave notice lately to their employers that they should require an advance of 2s. per week after the 6th of June.

Sunderland.—The master builders of Sunderland have formed a union for mutual protection and assistance in resisting the demands of their workmen for an advance of wages or a shortening of the hours of labour.

OYSTER CULTURE.

MR. JAMES LOWE has read a paper on this subject before the Society of Arts. The oyster, he said, was rapidly becoming rarer and rarer, and it seemed not improbable that if some measures were not taken it would gradually disappear. Fifteen years ago the attention of the French Academy of Science was drawn to this; and six years since an eminent pisciculturist, Mr. Coste, reported on the failure of some oyster fisheries to the Government, and under their auspices many of them had been materially restored, and oyster "parks," as they were called, had been established. The author described the mode in which these were formed, and the best kind of apparatus for collecting and preserving the spat or spawn. He urged that this method of culture might be applied to other shell-fish besides the oyster, particularly to the pearl oyster, or mussel rather, the fisheries for which were failing, especially in Ceylon. The Colonial Secretary, Mr. Cardwell, had asked for information from him that might be of service to the Ceylon Government as to this, and had sent him a dispatch from the acting Governor of Ceylon, on the subject. Mr. Lowe said the calamity was due, as he thought, to more than one cause, and that this was a case in which the artificial processes of the oyster-cultivators might be applied, almost with the certainty of success. In this opinion he was supported by Mr. Mitchell, who had studied the subject to as good effect as any one in this country; and he also found that Sir Emerson Tennent, late Governor of Ceylon, was of the same opinion.

In conclusion, Mr. Lowe pointed out how the processes employed by French cultivators might be applied to the oyster fisheries of this country, and answered various objections that had been advanced as to their applicability to English oyster beds. There were upon the Irish coast miles of shore which might be thus cultivated; and, on the shores of England, and especially in the mouths of our great rivers, and on the east coast northward from the mouth of the Thames, there were large tracts equally suitable. Already enterprises of this kind had been undertaken, and a company had been formed under the able management of Mr. Mitchell, which had acquired the use of a portion of the oyster layings on the foreshore to the west of the pier at Southend. Here they had laid down about 1,500 bushels of full-grown oysters, which had been spread over about five acres of space, in such a way as to leave room for the placing of 50,000 of Kemmerer's collecting-tiles. Another company was preparing to commence operations on the opposite side of the estuary, near Herne Bay.

The paper elicited an animated discussion, which was commenced by Mr. Ffennel, commissioner of fisheries, who observed that the cultivation of these now unproductive spots was a matter of national importance, entitling those who promoted it to the gratitude of the country. Mr. F. Buckland spoke of the great productiveness of the oyster, and stated that their spawning depended much on temperature. The company about to cultivate oysters at Southend, and of which the Earl of Somers and Sir Coutts Lindsay are directors, and Mr. F. Buckland their naturalist, was spoken of by Mr. Mitchell, who said that without any appeal to the public they expected shortly to put this matter to the test. He described somewhat of their plans, and said they looked for at least as great success as that which had attended the operations in France. Some account of the breeding-grounds at Baiæ was given by Mr. Bishop, and Mr. T. Ashworth explained the difference between the pares, or breeding-grounds, at Rhe, and the clairs, or feeding-ponds.

SUBSIDENCE OF A STREET IN LIVERPOOL.

AT a recent meeting of the health committee of the town council, the law-clerk read a letter addressed by Mr. J. Davies, mining engineer and surveyor, St. Helen's, to Mr. W. Culshaw, upon the subject of the subsidence of Back Mount-street, behind Sandon-terrace, and the consequent damage to property in that street and in Sandon-terrace. Mr. Davies reported that he had descended the old shaft, which was understood to have collapsed or run in. At 76 feet below the floor of the coach-house adjoining the shaft he found a blind tunnel in the red sandstone, running east and west, on the south side of and almost parallel with the London and North-Western Railway Company's Wapping Tunnel, and connected with the latter by a cross tunnel or driftway. The distance between the Wapping Tunnel and the blind tunnel was about 20 feet, and the latter was 20 feet wide and about 14 feet 5 inches high. On the west side of the shaft it was sound; but on the east side, about 18 feet from the shaft, the whole of the tunnel was blocked up with *débris*, which seemed to be refuse or rubble quarry stone. Upon examination he found that at this point the roof of the tunnel had recently fallen in, not far from the place where it ceased, and where there were evidences that when left, it had been the intention to carry it on. His opinion was, that the tunnel at this point had only been 2 feet below the bottom of a quarry, which had been imperfectly fitted up, and upon which the injured buildings had been built. Water, percolating through the rubbish, had carried a great weight of loose stone upon the weak roof of the tunnel: the tunnel had broken through in consequence of this; and the subsidence of the street and damage of the buildings had been the result of the giving way of the tunnel roof.

Discussion upon the subject was deferred, by consent, until the town-clerk's report should be presented.

STANDON CHURCH, HERTFORDSHIRE.

ST. MARY'S, the ancient parish church of Standon, near Ware, Herts, has fallen into a miserable state of repair, parts of it indeed being ruinous. By the strenuous exertions of the Rev. C. Puller, the vicar, and the cordial and sympathising co-operation of the principal ratepayers, money has been raised, and under the direction of Messrs. G. & H. Godwin, architects, the church is to be restored to something like its original condition. It is a large and has been a very handsome pile of building, with a total length of 110 feet, of which the chancel occupies 40 feet. The width of the nave (which has a clerestory) and aisles is 50 feet. The style of the chancel-arch is very beautiful Early English. The nave and aisles are in the Decorated style, with good windows.

The tower, which touches at one corner the SE. angle of the south aisle, was rebuilt about twenty years ago, when a large portion of it had fallen down from decay. The chancel is peculiar in being raised eight steps above the level of the nave, the rise of the hill having been followed in laying the foundations.

At present the external walls of the whole building are disfigured by plaster, and the flint-work under this is much patched with bricks and other stones. The stonework of the windows and buttresses is decayed, and in many places has been replaced by brickwork. The old roof has been removed, and a modern one of low pitch, screened by a flat plaster ceiling, substituted both in nave and chancel. The internal walls are dirty and ill-faced, and the internal stonework (and in the chancel the woodwork also) is much disfigured with paint and whitewash. It is intended to renew the face of the walls, both outside and inside; to rebuild the porches; to make good all the stonework of windows, strings, copings, and pillars, and remove all paint and whitewash from them; to take down the organ gallery from over the west door; to repew the church in oak; and to place a new plain high-pitched roof in stained fir upon the main nave.

The Duke of Wellington, who is lay rector of the parish, will do what is requisite to make the chancel correspond to the restored condition of the rest of the church.

Tenders were obtained for the execution of the works, and ran thus: — For the nave,—Myers & Sons, London, 3,280*l.*; Ginn, Puckeridge, 2,455*l.*; Gibbons, Buntingford, 2,346*l.*; Dove, Brothers, London, 1,915*l.* For the chancel,—Myers, 945*l.*; Dove, 550*l.*; Ginn, 465*l.*; Gibbons, 464*l.* The works are now being proceeded with.

Standon was anciently held by the abbots of Croyland (who had a good seat here in the eleventh century), the Clares, Astons, and Sadliers. Of the latter the church contains tombs. Last week, in taking the plaster off the walls inside, a handsomely moulded recessed sepulchre was thrown open in the external wall of the south aisle; with a stone coffin below the level of the pavement, the inner form of which (as is not unusual) follows that of the human head and body.

BRADFORD EXCHANGE COMPETITION.

THE competition designs for this proposed building have been on public view for several days of the past week, and have been visited by a large number of persons. They are six in number, and all Gothic in style, excepting that the architect signing "Experientia" sends also a slight sketch of an Italian building. The Bradford *Observer* says:—It is not our purpose to attempt a criticism upon them. All have more or less good points, and almost all, we think, serious defects. More than one it would seem impossible to put up for the money at disposal. The directors had a meeting to discharge the difficult and responsible duty of selection, and they ultimately agreed to request the architects of the plans with the motto "Experientia" (Messrs. Lockwood & Mawson), to offer proof that their design can be carried out for the estimate of 27,000*l.* The style of the design chosen is called, in the description accompanying it, "Venetian Gothic in character, freely treated, and admitting of great picturesqueness of effect and beauty of detail without entailing heavy cost." Over the principal entrance to the Exchange, on the part of the site near "Bartle's Corner," is a lofty tower.

THE NEW FOREIGN OFFICE.

ON the vote of 75,000*l.* for the new buildings, Mr. Augustus Smith complained that the estimate for this particular work had been increased since last year by the sum of 28,000*l.*, and that there was an extra item of 4,899*l.* now brought forward for the first time for abortive designs. He supposed that these designs had been prepared on the sole authority of the Board of Works. Mr. Cowper said that last year, when the estimate for the New Foreign Office was brought forward, he stated to the House that the sum of 200,000*l.* was the total amount which Mr. Scott, the architect, reckoned the erection of the building would cost. Since then, however, tenders had been received, the lowest of which amounted to 223,516*l.* He had stated at the time that the sum he named was the best estimate which Mr. Scott could furnish, but that the only real test would be the tenders. The item of 4,899*l.* charged for "preliminary expenses of designs for a Foreign Office, which were not adopted" was not submitted to Parliament before because Mr. Scott abstained from sending in his claim until a final decision had been come to with regard to the Foreign Office. In that item was included the charge for the designs prepared, by the direction of his predecessor, in the Gothic style, which style the House, after full debate, deliberately determined to reject. Mr. Augustus Smith wished to know whether he was to understand that 5,000*l.* in round numbers had been expended, without any previous sanction from that House, in preparing designs that were not adopted. That mode of bringing forward items of charge incurred four or five years ago was highly objectionable. The House being counted, only twenty-nine members were found present, and the House, therefore, stood adjourned.

THE ARCHITECTURAL MUSEUM.

ON Tuesday evening the Rev. G. Ayliffe Poole read a paper on "Painted Glass in connexion with Architecture." The chair was occupied by Mr. A. Beresford-Hope.

At the conclusion of the paper, which will be found under its own heading,

Mr. Hope, having complimented Mr. Poole on the manner in which he had treated the subject, observed that among the finest specimens of old glass which he could call to mind was that at Merton College, Oxford. He had often recommended painters on glass to keep that splendid example in view, and not overcharge their works with great masses of gaudy colours. Some artists in glass reminded one of people who believed that they looked best when clothed in the brightest and most discordant colours, as, for instance, a lady in grey boots, blue gown, scarlet shawl, yellow bonnet, green gloves, and mauve parasol. He was sorry to say that the present would be the last lecture of the season, as Mr. Parker, who had promised a paper on the Mediæval houses of the city of Wells, was unable, on account of severe illness, to fulfil his promises. The prizes were not yet, however, settled, but an announcement would be made in full time to enable every one to prepare.

ARCHITECTURAL STRICTURES, BY AN AMATEUR.

THE idea that no building can have any pretensions to architectural beauty unless it be profusely ornamented, is the main reason why our streets in general are so atrociously ugly. The architects, or builders rather, finding that the funds at their disposal did not admit of their façades being covered with stone-carving, &c., made them so obtrusively plain as to resemble workhouses or reformatories rather than the houses of gentlemen; or else, which, if possible, was much worse, they covered them, and still cover them, with stucco, in order to mould upon it the scrolls and frets which compo-daubed houses generally exhibit.

A learned writer has given it as his opinion that architecture is ornamental and ornamented construction. I should qualify this a little, and say that architecture was ornamental *or* ornamented construction, or both. Because, if the construction must be ornamented as well as ornamental, no distant view will suffice to show whether a building is architectural or not; so that, to know that Salisbury Cathedral is an architectural building, we must go sufficiently near to see its string-courses, its dripstones, the mouldings of its windows, the crockets of its pinnacles, &c., &c.

But, to return to my subject. I have said that the prevailing idea that abundant ornament is absolutely necessary to architecture is the reason why our streets are so hideous; and also why so many of our buildings exhibit such disgusting vulgarity in their profusion of decoration,—decoration which in some cases means nothing at all, and in others means something that has nothing to do, in any way whatever, with the purposes and uses of the structure that bears it.

Sometimes, too, we find false construction employed as ornament. The church of St. Mary-le-Strand, for instance, built in the early part of the last century, has pediments on its flanks for no other purpose than to break the surface into petty parts, and so, in the architect's opinion, to enhance the beauty of the design.

Until a few years ago nothing was considered worthy of the name of architecture unless its façades were covered with sprawling pilasters, surmounted by huge acanthus leaves (for it would be an insult to classic art to call them Corinthian capitals), and above these an entablature almost completely filled up by lines of square blocks, without which the architects thought that nothing could be perfect.

It is this love for excessive ornament that keeps up the use of stucco. This vile abomination is mixed on the pavement, is carried up in pails and daubed over the brick walls; and, while it is soft, it is moulded by the "artist in compo," into the hateful scrolls and frets which, being easy of execution, are so common; or it is put into moulds to the same effect. And when stone is used, and funds are plentiful, a very large portion of these funds is devoted to superfluous ornament. Some buildings in the city of London have not two square feet together of plain surface; and, very often, most of this ornament is *festoons of fruit and flowers*. Why fruit and flowers are strung together over the front of a mercantile building, I cannot imagine,—except, perhaps, it is that architects never think of designing some ornament more in accordance with their requirements. To show that suitable ornament can be and has been designed, I may instance the London and Westminster Bank. This building has very little ornament, but, what there is, expresses entirely its uses. The arrows bound together are a symbol of the joint-stock company; and the figures at either extremity of the entablature represent the sister cities of London and Westminster.

It may be said that in straight streets ornamental construction is impossible, on account of the impracticability of projections, recesses, &c. But a little taste and skill would easily remedy this, without sacrificing the uniformity of the horizontal lines in any way. I have seen it recommended in the *Builder*, that winding staircases,—which are very generally used in mercantile buildings,—should be shown externally in the form of turrets. I wish that this suggestion was attended to and made use of. It would vary the façade, and render it picturesque without any affectation. It would be perfectly truthful, and far preferable to putting staircases in wells or shafts in the middle of the building, or, as is very often the case, those having no staircase proper at all, but only a flight of wooden stairs between each story.

But to say nothing of the parts of a building; as a whole it can be made ornamental, without ornament, by mere beauty of proportion. We know the exquisite grace of some of Wren's interiors, and when we see them, we often wish that their ornament, scanty as it generally is, were entirely absent. The surpassing elegance of St. Stephen's, Walbrook, cannot be enhanced by plaster mouldings. Height, breadth, length, and their relative proportions form the pure beauty to which all good architects have aspired: ornament is but an accessory, which is usually very desirable, yet still, to good architecture, not indispensable. Messrs. Robarts & Lubbock's bank, in Lombard-street, has very little ornament, yet it is a handsome building, entirely owing to its proportions; and I am glad to see that many other new buildings, though but few in proportion to the total number, have been designed upon the same principles, and with the same happy results.

Besides the proportions of a building, in its various parts, we must consider very carefully the proportion of mass to space, of walls to windows and doors. This is the greatest obstacle to good street architecture. There can be no doubt that the fewer windows there are in a building the better is its general appearance. It is this scarcity of openings which is the principal beauty of classic architecture: its harmony, its unity, almost entirely depend upon it. We have two large public buildings in London which are almost entirely without windows in their external façades. They are the Bank of England and Newgate prison. They have each a centre in their principal front, and this only is pierced with windows, and it is well known that these parts are the worst in the whole of either design. The appearance of each is mean in the extreme, and we could hardly believe that the grimly grand wings of Newgate could have anything to do with their centre, or that the beautiful Lothbury portico and front of the bank could be associated at all with the insignificant centre in Threadneedle-street.

Taste and carefulness will overcome the difficulty in buildings which only require light for ordinary purposes; but what is to be done with our shops? In them every particle of light to be obtained is required, so that their ground floors, which should be the most massive, are nothing but plate-glass; and this plate-glass, which is an architectural vacuum, has to support three or four stories of brick or stone. Cast iron presents all difficulties of construction; but cast iron cannot assist æsthetics. The eye is not satisfied by the slender iron columns so far apart, bearing so vast a weight above them, even though that weight is no more than one-fourth of what might be borne. But how is it to be remedied? One famous writer has recommended tradesmen to return to their casemated windows, low rooms, &c., &c., but I am by no means inclined to agree with him. I think that establishments might be preserved as large and imposing as ever, and more so, and using but a very little more space. By substituting piers of stone or brick for the iron columns, and placing low arches upon them, an appearance of strength might be imparted to the structure, though in no way lessening the reality of it. And what an increase of beauty we should gain! The eye of taste can never rest on a stone entablature, 20 feet or 30 feet long, with no apparent support but plate glass, and be satisfied. I have seen many shops, both in the City and in the west, looking as if they were suspended in the air, from having so transparent a basement. No doubt the architecture of the upper part is very good; but before the whole building can be good, we must have a base to match what it supports.

EX SUPRA.

NATIONAL MUSEUM, SOUTH KENSINGTON.

THE accompanying view and plan illustrate the design submitted by Captain Fowke, to which the committee awarded the first premium. We have already described the design at considerable length, and propose here to add only the views and claims of the designer, leaving untouched any critical observations and objections we may have already made with reference to it, or may hereafter feel it necessary to make.

In the general arrangement of the plan the design prepared by Mr. Hunt, it is maintained, has been followed, in having a series of rooms opening out of a longitudinal corridor, with uninterrupted side light along one side. The arrangement of the different rooms is, however, considerably altered, as the designer conceived that the lighting in the model plan would not be satisfactory, and that it is not sufficiently subdivided by walls as a security from fire.

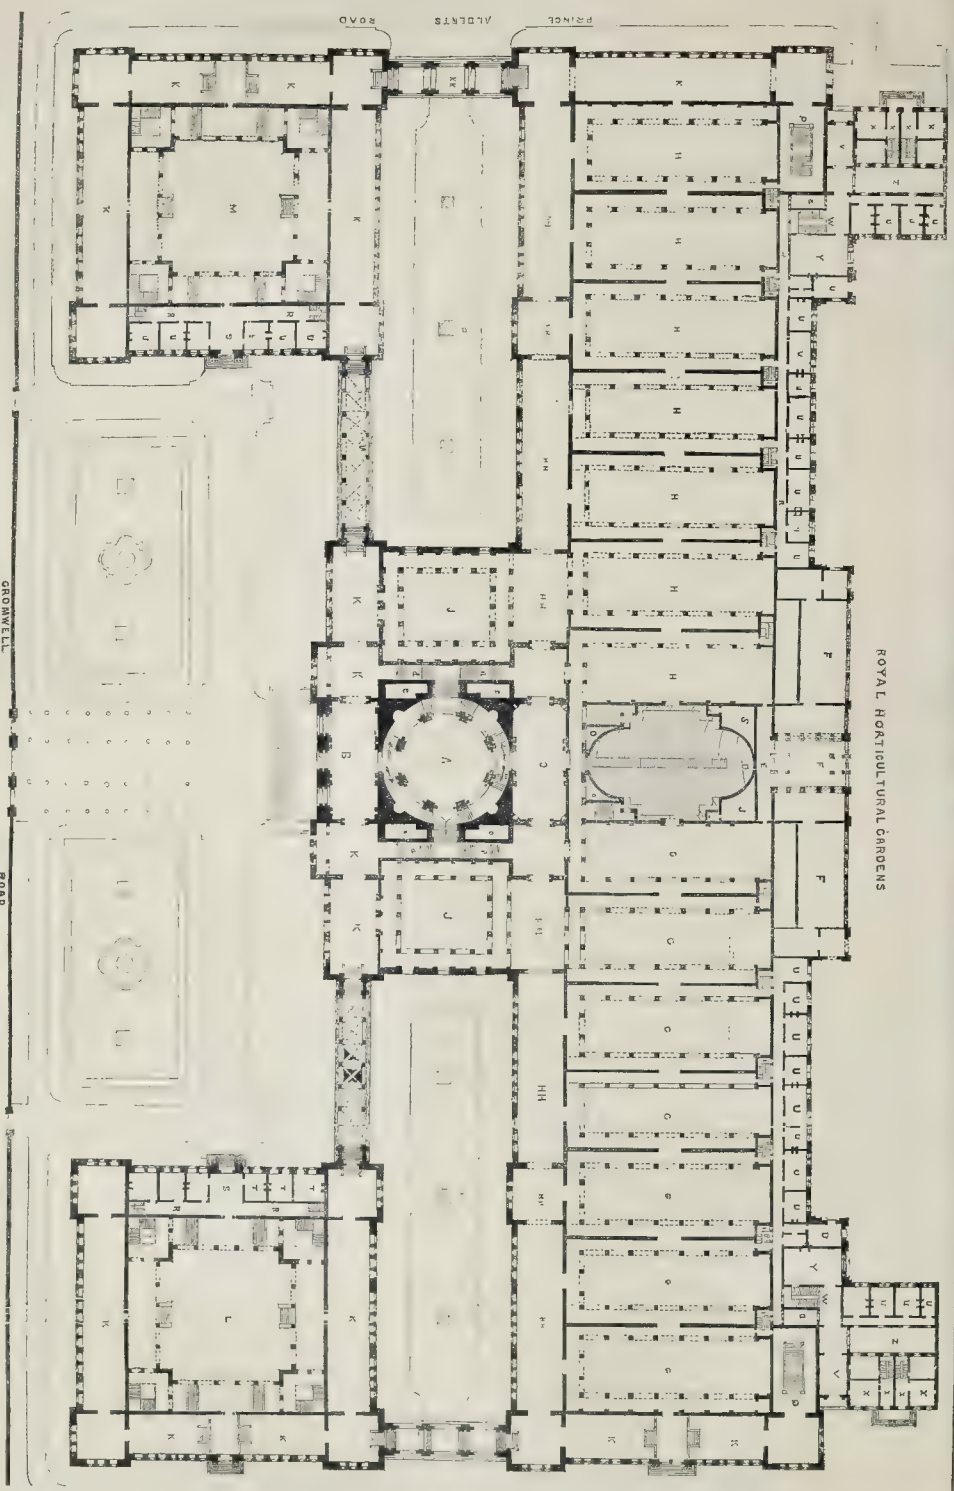
The object has been to divide the museum into a series of compratively small chambers, as being more suitable for the arrangement of a scientific collection than the large open spaces necessary for more heterogeneous displays or exhibitions.

The principle of lighting adopted is the same that has been employed at the Jermyn-street Museum namely, through the haunches of the roof. A series of small rooms, with direct top light, is shown on the upper floor, and a large amount of side-lighted space is also obtained on each floor, by keeping the corridor of communication open on one side. It is considered that the curator will have at his disposal every possible variety of light, to suit the great variety of objects which he has to display.

This system is much to be preferred to the ordinary hospital-ward system of covering the ground with a series of small two-storied houses, with insufficient side-lighting from the narrow streets, 20 feet or 30 feet wide, between them. The lower floor of a wide building, 70 feet or 80 feet high, cannot be lighted from a street some 30 feet wide.

The communication is simple and straightforward, all the rooms leading directly out of one great corridor on both the ground and upper floors, which corridor is in immediate communication with the principal stairs.

The professors' and microscope rooms are placed in immediate connexion with both floors of the museum by the stairs at the north end of each room: they are also by this means directly connected with the small galleries, which would probably contain objects of interest to the scientific student which it would not then be desirable to show to the general public, for whom a more typical collection would be arranged in the larger rooms.



In erecting the Natural History building on the east side, the entrance would be, as shown, in the centre of the east front, with the library immediately over.

A protest has been made against the selection by Professor Kerr, to whom the second premium was awarded, and to which we may refer on some future occasion.

REFERENCE TO GROUND PLAN.

A. Hall and Staircase.
B. Vestibule.

MORE DISCOVERIES AT POMPEII.—Some interesting discoveries have been made in a house which was being built at the time of the catastrophe. This house contained a large deposit of Egyptian marble, now brought to light, and valued at 50,000f. On the ground floor the remains of a magnificent bed have been found: the woodwork is burnt away, but the bronze ornaments are in perfect preservation, consisting of a lion's claws which formed the legs, and geese's heads which adorned the top. This bed is now to be constructed according to its original design. The blocks of marble are to be used for plinths to the most valuable statues of the museum.

PROPOSED MUSEUMS, SOUTH KENSINGTON.—PLAN OF PRINCIPAL FLOOR, INCLUDING PROPOSED AFTER-APPROPRIATION OF THE WHOLE OF THE AVAILABLE LAND.

DESIGN FOR PROPOSED NATIONAL MUSEUMS, SOUTH KENSINGTON, TO WHICH THE FIRST PREMIUM WAS AWARDED.—CAPT. FOWKE, R.E., ARCHITECT.

THE INTERIOR OF A GOTHIC MINSTER.*

The Aumbries, Lockers, or Cupboards.—There are two large aumbries on the north side of the altar-platform at Chester. Three, formerly behind the reredos, are preserved at Carlisle; two of these of the fifteenth century, and one of earlier date, and carved. At Salisbury there are several good specimens, one retaining its original doors. At Durham there are double aumbries on either side of the altar platform, which held the ewer, books, cruets, chalices, patens, and altar linen. All the keys were locked up by the sacristan at night, in a master aumbry, until early in the morning. Usually the aumbry is provided with a slab. At Selby there are some good specimens of wainscot aumbries.

The Shrine.—The continuous prolongation of churches eastward was productive of many changes in arrangement, but none were perhaps more noteworthy than the formation of the feretory behind the high altar in the place of the bishop's throne, and usually provided with an altar of its own, erected against its western side, as at Bury St. Edmund's and Westminster.

At St. Alban's, in the thirteenth century, the length hitherto assigned to the sanctuary was subdivided, the western portion being still dedicated to divine offices, and the space beyond to the shrine, which was supported on six pillars. At Winchester, St. Swithun's shrine (so it would seem from the dismantled feretory) was mounted upon a platform set against the stone screen, the superb arcade of which adorns the eastern processional path. The shrine was approached on either side by an ascent of steps, and the altar standing in the centre beneath it. At Canterbury the shrine of St. Thomas consisted of a basement of marble and stone, with a wooden superstructure plated with gold and embossed with jewels, which contained the iron chest wherein lay the primate's body. The stain of the metal screen still remains on the floor, and the crescent upon the vault, near which are staples, which probably sustained bouquets of lights at grand exhibitions of the relics. As an additional security in case of fire or popular disturbance, bandogs were employed. In front of the site of its western altar is a fragment of mosaic pavement resembling that of the platform of Westminster. Over St. Anselm's chapel in the south aisle is the watching-chamber, with a grated window, and containing an oven and fireplace used by the sub-sacristan for baking altar breads. At Lichfield the pilgrims were required to cross the Minster pool by the ferry-boat, and then proceed through the south choir aisle to the feretory, where they offered. The St. Chad's pennies, like St. Richard's pence at Chichester, paid at Whitsuntide, were the same as the pentecostals paid to the mother church in other dioceses. When the portable shrine was carried through the diocese to collect alms, all the bells were rung merrily in peal to greet its return. At York, on the north side of the high altar, was the watching gallery of St. William's shrine, which was hung with pious offerings of coral, owches, rings, girdles, slippers, and gilded models of limbs. A small oriel on the north side commanded a view of the aisle, and opposite to it was a loop in the wall which looked into the chamber behind the altar. At Durham the shrine of St. Cuthbert consisted of a basement of stone, supported on nine pillars, but afterwards of alabaster and green marbles limned with gold, on which rested a painted cover of wood, richly crested, which was drawn up, on St. Cuthbert's day and on great festivals, at matins, high mass, and vespers, by means of a rope, to which sweet-sounding bells were attached. The shrine was provided with seats for sick folks, and adorned with precious metals, jewelry, rich hangings, and sumptuous offerings; at the west end was the altar. On the north and south sides were relic aumbries. St. Cuthbert's banner, a captured standard of Scotland, and similar flags, drooped over the aisles, whilst nine cressets, burning in front of the great marygold of the Nine Chapels, threw a soft light over the gold, the jewels, and colours, and threw out the marble reredos with fine effect to the eyes of the pilgrims entering from the nave. At Westminster, Ely, and Chester, the shrines still remain perfect, and at St. Alban's and Oxford the watching lofts of oak. At Ely, in 1378, the triforium was cut through to throw additional light on the shrine, as the aisle windows at Carlisle were enlarged for the benefit of the high altar, and the east windows of the nave at Norwich for giving additional light to the choir.

The basement of Edward the Confessor's shrine is of Purbeck marble, enriched with Roman mosaic, having on the north and south sides three niches for sick folk. Above them are panels filled in with mosaics, porphyry, and serpentine, inclosing the body of the Confessor. At the east end were two twisted pillars, and on the west a large slab, forming the reredos of the altar, and on the sides the sockets for its bankers or curtains, to prevent the access of air to the candles, and the remains of two pillar brackets for the statues of St. Edward and the pilgrim. Above all was a church-like shrine-cover. At Ely the shrine of St. Etheldurga consists of an open lower story and an upper stage of considerable height, decorated with niches, and once containing her body. The silver shrine, before the time of Bishop Nigel, profusely jewelled and covered with statues and crystal, inclosed the actual coffin, which was of marble. The entire structure, which had an altar, was enriched with a rood, a majesty of ivory, and silver tryptych studded with gems. The shrine of St. Werburgh, of the fourteenth century, at Chester, consists of a stone basement, having foliated arches, with canopied open lights above, and effigies in niches. Jocelyn of Brakelond has left on record a minute description of the shrine of St. Edmund and St. Edmund's Bury; and Stukely, in his "*Iter Curiosum*," has done the same work for that of St. Hugh, at Lincoln, where it was pyramidal, and supported a chest plated with gold. Of those of St. William at York, of St. Paulinus at Rochester, of St. John at Bridlington, of St. Chad at Lichfield, St. John at Beverley, St. Ethelbert at Hereford, St. Osmund at Salisbury, or of St. Richard at Chichester, we possess no details, except as regards the lighting, as to which, by an injunction of Stillid II., 1227, ten tapers *quadrate* were to burn round the shrine on great festivals, and on lesser feasts two round tapers at the shrine, a third at the tomb, and nine about the shrine.

In some instances shrines occupied a subordinate position, as at Oxford. St. Frideswide's was adjoining the north choir aisle. At Lincoln, where little St. Hugh's was in the south choir aisle, Alderby's silver shrine, of beaten silver set with diamonds and rubies, stood in the transept. At Durham, Ven. Bede's was in the galilee; at Hereford, that of Cantilupe occupied a transept aisle, like that of St. Amphibalus at St. Alban's, and St. Coradoc at St. David's. The basement is of Purbeck marble and freestone, with effigies of Knights Templar in niches. The upper stage consists of a canopy resting on open arches. At Oxford, the watching loft, of oak, which was attached to St. Frideswide's shrine, is composed of two stories, the lower closed, resting on the founder's stone tomb, and the upper one open. At Rochester, St. William's shrine was in the north arm of the choir transept, which, like the corresponding one on the south, was shut off from the central bay, containing St. Paulinus's shrine, by curtains. At St. David's, the saint's shrine was merely a tomb, with quatrefoiled apertures for offerings on the north side of the choir; and at Gloucester, King Edward II.'s shrine is a superb canopied tomb in the same position, within a chantry. There is a bracket for the reception of offerings (the box or chest used for a similar purpose at Chichester is still preserved). At the entrance of the adjoining aisle is a stone lectern, at which a monk recited the story of the murdered king to the pilgrims. The convent declared that the abbey church might have been rebuilt, so great were the offerings made at the time. At Ripon, the tomb of St. Wilfrid was seen by Leland under the northernmost arch of the choir, next to the altar (his shrine stood in the aisle), and a red chest for offerings by the pilgrims was placed at its foot. Probably, the fridstool stood near it. The so-called tomb of St. Theobald was probably the shrine to contain the bones of the early archbishops of Canterbury; and at Peterborough a Norman coped shrine is preserved. On Scrope's shrine, at York, were hung rings, hands, feet, hearts, and eyes, placed by persons who believed that these parts had been cured by his prayers; and ships and oars offered by seamen; while silver rods served as barriers before the rich cloths on which the ornaments were spread.

Processional Path.—*Spacium vel via processionum a retro altaris* (W. Wyrc., p. 242, *latus pone chorum*; Mon. Anglic., 2nd edition, p. 995). The transverse aisle in square-ended churches is commonly doubled, as at Lichfield, or even tripled, as at Winchester and St. Mary Overy, in order to provide room for chapels, as well as a passage for processions. At Hereford, the aisle resembles a low transept, and the centre bay is elongated into a lady chapel. At Romsey it is single, and opened in a similar manner into a lady chapel, whilst the outer compartment form apsidal chapels. The word chapel is derived from chapelle (*i. e.*, "roofed"), a tent for divine service used by the French kings in their campaigns, in which they carried with them the relics, especially of St. Martin, enclosed in a "cappa" or covering; hence the name of chaplains for the priests who served with the army, and also celebrated in the oratories of the palace in which during time of peace these shrines were deposited (Mayer, 1, § vii. p. 38; Scarfantoni, lib. 1, t. iii. p. 12). The eastern screens at Fountains, the lady chapel of Hexham, and the Nine Altars of Durham, seem to have been further developments of the same idea, which appears also in the longitudinal lady chapel of Peterborough. At Pershore, Tewkesbury, Westminster, Gloucester, and Norwich, there are radiating chapels opening from the circular procession path. At St. David's, by a unique arrangement, where we should expect a shrine we find a Trinity chapel, c. 1509, divided off from the processional path.

The Lady Chapel.—The earliest lady chapel in England was that in the western apse of Canterbury, which was removed to the north aisle of the nave by Lanfranc; and, finally, to the east side of the north arm of the transept, as that of St. Alban's was in the Norman period, on the east side of the south arm, and also later at Worksop. The earliest lady chapel, as a separate building, can, scarcely be dated before the close of the twelfth, or rather the beginning of the thirteenth century. It was in its ordinary position at the extreme east end, as at Lichfield, Hereford, Wells, Exeter, Chichester, Gloucester, Salisbury, being a chapel, or included under the same roof as the presbytery, as at York, Lincoln, Worcester, St. Paul's, Selby, Howden, Hull, Hexham, and Carlisle. But there are exceptions. At Rochester the presbytery absorbed it, and, as at Waltham, it is on the south side of the nave; at Bristol, Canterbury, and Oxford, it lies parallel with the north choir aisle; at Ely, as formerly at Peterborough, it is actually detached on that side; at Ripon, it is over the Chapter-house on the south side of the choir; at Wimborne it was the south arm of the transept. At Bristol, there was, besides the older lady chapel just mentioned, a second later chapel at the east end. At Christchurch there is a chapel of St. Michael above the lady chapel, with stair turrets on either side. At St. Leu there is a chapel above the lady chapel. In the piers on each side of the western arch of the lady chapel at St. John's, Chester, there are indications of staircases to an upper chapel, used for the exhibition of relics on certain festivals, with ascending and descending stairs for the pilgrims. The common type of the Cistercian churches in this country was a square east end, without a projecting lady chapel; but it must be remembered that all were dedicated to St. Mary. At Lichfield, by Bishop Heyworth's statutes, St. Chad's chaplain sang the Matin mass at five a.m. daily in the lady chapel, and by Bishop Hacket's statute, an early service was to be said at six a.m., for the convenience of small tradesmen, labourers, and servants. At Ripon, the lady loft is built in a second story, c. 1480. At Ottery it is entered under a screen and gallery. In the case of an apse the lady chapel was the central of three radiating chapels, as at Norwich, Gloucester, Battle, Reading; or more, as at Westminster, Tewkesbury, Pershore. A curious modification of the additional chapels is found at Norwich, where the smaller chantries were ranged on either side of the presbytery. At Canterbury, the so-called Becket's crown (the name being derived from the peculiar junction of the vault shafts) forms the eastern end. From its octagonal form it probably was intended to form a baptistery: a detached building of this character is known to have stood at an earlier time on the south adjoining the eastern arm. The font of Canterbury was of silver, and usually carried to Westminster on the occasion of royal christenings. In the cathedral of Drontheim there is a somewhat similar octagon, enclosed with screens of stone, c. 1311.

The Crypt was the Christian's burial place without the city (Frances, c. xxvi. p. 447), being a subterranean city of the dead; and serving as a church (p. 448). Cemeteries within the city were made round the church after the reign of

* By the Rev. Mackenzie E. C. Walcott, M.A. See pp 348, 351, *ante*.

Constantine (p. 449), and interments, at first permitted in the outer court itself, were of later introduction within the church. The first lay person buried inside a church was the Emperor Basil (n. 216, p. 458). Special exemptions, by canon law, were made for internal interment in the case of saints, bishops, canons, distinguished clergymen, abbots, monks, and lay patrons and benefactors, and eminently worthy laymen (Mayer, i. 80). The crypt was a development also of the confessio, in which the martyr's relics were enshrined in the basilica, in allusion to Rev. v. 9, and is so called by Eadmer (A.S. ii. 195). The crypts of Canterbury, Winchester, Gloucester, Rochester, Worcester, York, Repton, were all founded before 1085; after that date they were not made, except as a continuation of former crypts, as at Canterbury and Rochester. Probably the construction of upper chapels and treasuries led to their disuse. For some reason unknown many Norman churches, such as Durham, and some, as Chichester, owing to an unfavourable site, have no crypt. Those of Christchurch are little known: they form three of very early date, one being situate under the presbytery and wings of the transept respectively. At St. Paul's the crypt was called the Shrowds; at Canterbury it retains its old name of Undercroft. The exceptional instance of an Early English crypt occurs at Hereford, and at Wimborne there is a crypt open to the choir aisles, which was a Decorated contrivance for creating this adjunct in a church which was never intended to have one. Occasionally we find a crypt under only a chapel, as at Waltham and Exeter; or occupying a portion of a nave aisle, as at Dorchester and Bosham; or beneath the chapter-house, as at Westminster and Wells. But the earliest crypts which we possess are those of Hexham and Ripon. In the former there were three entrances, one used exclusively by the priest serving at the altar, the others for the ascent and descent of the worshippers. On descending the central flight of stairs the pilgrim gained an antechamber, from which a view through a round-headed archway was permitted into a chapel containing the saint's relics and altar. In the wall are three niches, with funnel-headed openings for lamps, a similar niche provided for light to the antechamber: the pilgrim, having performed his devotions, turned northwards into a similar small chamber, and by a vaulted passage on the north side of the chapel returned to the upper church. In the other crypt of St. Wilfrid, at Ripon, the passage on the north leads to the choir, while on the south the passage of the pilgrims conducts into the chapel, which has its altar and relic recesses and lamp niches: one of the latter had been perforated, and forms the well-known Needle, on which Camden is communicative and Fuller witty. At Oxford, in 1856, a small crypt with two recesses was discovered under the crossing. Another has been indicated by Gunter at Peterborough. At Winchester, a low arched doorway below the screen of the feretory led down to the relic chamber, which was in consequence called the Holy Hole. The Norman crypts form large subterranean churches, and ordinarily were apsidal; that of Canterbury, 1096, was filled with altars. In the centre was the altar of St. Mary, below the high altar of the presbytery, and enclosed with perpendicular stone screens. The bracket, image niche, and rings for suspending lamps, still remain, as well as the aumbries, and drains of some other altars. Two flights of stairs on the west, and two additional flights communicating with the transept, gave ample means of access. Besides some interesting paintings in tempera, there is a large recess for the preservation of relics and treasures in times of danger. In this, as in the three other apsidal crypts, Winchester, 1079; Worcester, 1084; Gloucester, 1089, the processional paths round the east end; Worcester has three rows of intermediate pillars (Gloucester and Canterbury having two, Winchester but one) in the central alley, and in each aisle a dividing range. From the central pillar and radiating vault of the eastern apse of the crypt, the idea of the central pillar of the chapter-house has been supposed to have taken its origin. At Canterbury the crypt follows the lines of the eastern limb of the church, at Gloucester the transept and choir foundations. At St. Paul's, in the west end of the Shrowds, was the Jesus Chapel, where the Apostles' mass was sung daily at four or five a.m., and the eastern portion formed St. Faith's Church. The crypt of York is of four aisles, with a transept, and is approached by two staircases; it contains a lavatory and well. At Rochester, the crypt of seven aisles, and not completed until the thirteenth century, was always square ended, and contained nine altars. Some water-drains and wall paintings remain, besides a small groined penitential cell, perfectly dark, and receiving air only from above by a small flue (the only access being by a stair in the thickness of the wall leading to the upper church); and also the so-called "indulgence-chamber," a large apartment reached by a wall-stair, and used to secrete the treasures in times of danger. No one was admitted to this crypt except for mass. At Gloucester there is a cruciform wall-recess of the same design; and the chapels retain in several instances their drains. The entrances were from the transept. The crypt of Winchester contains a well. At Christ Church the crypt below the north wing of the transept was recently found to be full of bones. At Hereford, the crypt under the lady chapel was appropriated as a charnel in the fifteenth century.

Our minsters form a history of the country, of the progress of art and science, the varieties of costume of every class, and galleries of national worthies in the effigies which they contain. The spandrels of the aisle of Lichfield, the angel choir of Lincoln, the corbels of Manchester, and the minstrel gallery of Exeter, illustrate musical instruments; the window framing of Canterbury, and the screens of Salisbury, Canterbury, and Westminster, metal works; the copes of Ely, Durham, Carlisle, Romsey, and Westminster exhibit the embroiderer's art, once known throughout Europe as English work. The weapons at Canterbury of the Black Prince, at Westminster of Edward III.; the portions of armour at Carlisle, York, and Chichester; the clocks of Exeter and Wells; the bishop's rings at Winchester, Chichester, York, and Hereford; the retables of Exeter, Norwich, Westminster, and Ripon; the cope and record chests of Chester, Westminster, and York; the dyptych of Gloucester; the money trunks at Chichester and York; the horns of York and Carlisle; the font covers of Beverley, Selby, and Durham; the *mappa mundi* and portable shrine of Hereford; panel paintings at Llandaff, Ripon, and Romsey; the glass of Dorchester, Lincoln, Lichfield, Bristol, Exeter, York, Wells, Canterbury, Salisbury; relics of St. Cuthbert at Durham; the staffs of York and Winchester; the chalices and maze bowl of York; the old chairs of York, Winchester, Lincoln, and Hereford, are all precious memorials of the past, invaluable to the artist, the architect, and the archæologist, as the true models for imitation. The development of monuments would form a chapter in itself; ranging from the sepulchral cross of Ovin, the incised slab, the coped tomb, to the stellated canopies of Bristol, St. David's, and Tewkesbury; the high tomb with its weepers, the screened tomb, the chantry, the complete chapel and double oratory; and embracing the cadaver, the low relief, the semi-effigies of Lichfield and Worcester, the brasses of Carlisle, St. Alban's, Ely, Dorchester, Manchester, Hereford, Salisbury, and Westminster.

Time will not admit, and deference to the professional architect would forbid, any details with respect to the marvellous transformation of a Norman into a Perpendicular nave at Winchester; to the curious method by which the Norman walls of Gloucester were hung with later work; the remarkable proofs of a permanent body of local masons offered at Wells; the identity between the skeleton vaultings seen in Bristol and St. David's; or the parallel arrangements in the eastern portion of the latter cathedral and Sherborne.

An interesting inquiry might be prosecuted into the determination of the names of the actual designers of our minsters. We can point, indeed, to Wykeham at Winchester, to Elias de Dereham at Salisbury, to Richard of Saxmundham, and Alan de Walsingham at Ely; we are enabled to recover the names of "Walket," custos and procurator fabricæ, in the thirteenth century, at Chichester; and of Horton at Gloucester, as supervisor operis. It is, however, an unpractical study at this period: we can no longer expect the clergy, as the monks of Gloucester, to construct vaulting with their own hands; and it will be our wisest course to delegate our future works of restoration or construction to those eminent men who, by deep study and careful inquiry, and long experience, are no followers of the destructive Wyatt of the last century, or his more recent and less excusable and far less able imitators, but the true and earnest conservators of the sacred trust confided to them. I am quite sure that these are the very persons who would be the first to desire the co-operation, advice, and supervision of the clerical guardians of the fabric as those most familiar with the suitable arrangements.

According to a Parliamentary return recently issued, 500*l.* was granted for the restoration of York Minster in 1841, by the Ecclesiastical Commissioners, and 2,938*l.* 18s. 10d. for Ripon Cathedral in 1842. Under the authority of orders in council of several dates given below, the following chapters transferred to the Ecclesiastical Commissioners their corporate estates in consideration of the annexed sums:—Bristol, June 7, 1862, 6,000*l.*; Canterbury, August 6, 1862, 20,000*l.*; Carlisle, November 10, 1852, 15,000*l.*; Salisbury, October 11, 1861, 10,000*l.*; Winchester, April 16, 1861, 5,000*l.*; and Worcester, November 29, 1859, 15,300*l.*; total, 71,300*l.* With respect to the chapter of Worcester, it is noted that "the commissioners, being possessed of a lease for lives under the chapter, agreed to pay to the chapter for the addition of two lives, in the place of two that had died, a fine of 5,160*l.*, the chapter undertaking that the whole of it should be appropriated towards the repair of the fabric." Rochester, St. David's, St. Asaph's, and Norwich are the only cathedrals still left neglected.

Every accessory is now carefully studied; the recumbent effigy, the inscribed brass, the memorial window, are revivals of the last few years. Still it is to be feared, with too much reason, that very many of our so-called restorations have been merciless reconstructions, and not, what they ought to have been, repairs when indispensable without disturbance of that which could have been and ought to have been reverentially retained.

For the prevention of similar outrages, we must look, I believe, not, as has been supposed, to the appointment of a Government inspector of public monuments, but to the force of popular opinion, and the education of every class in all that relates to art, an office signally belonging to the designs of this museum.

The interiors of our minsters give evidence to that wonderful transition which tentatively, for constructional reasons, at first, and afterwards eagerly, by an improving taste and a noble hardihood, exchanged the Norman flat ceiling of wood, Titanic round arches, and massive pillars, for the pointed arch, the shafted column, the coved vault of later styles. We wonder at the life, the prolific ingenuity, the elevation of devotion, which form the glorious characteristics of these structures; but the solution is, they were built mainly by free-will offerings and free labour, while, as soon as one part was completed, they rose, not as the first temple, in silence, but with the simultaneous sound of the axe and workman's tool, and the almost ceaseless chanting of the service of God. The true reason, I believe, why we can now ascertain few of the names of our architects, is, that the works gradually passed from the hands of ecclesiastics into those of fraternities of artisans—artisans, or artists, I say, for art can never be dissociated from the actual workman—directed by a lay master of the works, the clerical treasurer being still the master of the fabric and its funds. They had but one object,—layman or clerk—to work so as to raise upon earth structures least unworthy of their lofty destination: their work was in common, one and all together; but the glory of its inspiration they gave to God only. With them, *laborare est orare*, or, as the statutes of Hereford say, "No work without devotion, no devotion without work." Their great ideal was yearning towards heaven, towards what is infinite and everlasting; and they have left its impress on the breadth of the vast aisles, the soaring height of vaults, the inexhaustible multiplicity of never-ending and ever-varying views, extending in every direction, and stimulating alike imagination, sacred love, and devotion.

Grand, indeed, are the majestic avenues of the pillars of stone; the tempered hue cast by the stained glass; the glittering lights—grand the results of the taste, hardihood, and skill of architect, carpenter, mason, goldsmith, embroiderer, glass-stainer, worker in iron and brass, simultaneously labouring in unison! Grand are those two great voices of the church—the music of the organs, and the soft thunder of the bells; grand all the exquisite beauty of the solemn worship hallowing the place! but on these points we must be silent here.

Still we may point to the interior of a Gothic minster as being the first exclusively Christian

building which ever gathered under one roof all worshippers; catholic, indeed, and each a true church of the people, as being the joint product of layman and clerk, and the long unbroken work of many generations, so uninterrupted even now; and also of that style which, whatever differences there may be in designating its gradations, or elucidating its origin, is truly the Mediæval style of England—indigenous, national—in which an honest pride at home is centred, and on which our real architectural reputation rests abroad. It has grown with this country's growth, and shall last, I trust, until the great globe itself and its gorgeous temples shall crumble into dust, and they who erected and wrought, and they who worshipped in them, shall pass into that great city wherein there is no other temple but God Himself.

Whilst I advocate the retention of all that is ancient and of worth in the past, and its guardianship by us for the future, let me add the conviction which relates to the present, that our cathedrals are now once more being made available and inviting to the largest congregations which can be accommodated, and so becoming, what they are in constitution and design, not only the ornaments of our cities, but each the central parish and mother-church of the entire diocese (Frances, c. xv., n. 173; xvi., n. 16; xxi., n. 17; Mayer, i. § 3, p. 35). They are no longer regarded as a college-chapel, or church of the close, instead of the church of counties, and the models for parish churches (Mayer, i. 47); but with a ritual celebrated in its highest and most musical form, with open doors for the reception of all comers, with capacity for fulfilling the largest diocesan requirements, and as far as possible enabling every worshipper to see and hear; in one word, they are fulfilling the great want of the period, and being recognised as the free and frequented churches of the people.

THE BRADFORD RESERVOIRS.

THE Waterworks Committee of the Bradford Corporation have before them the report of Mr. Rawlinson, C.E., to Sir George Grey, giving the results of his recent inspection of the various reservoirs belonging to the corporation. The report concludes thus:—"That the Bradford reservoirs, conduits, aqueducts, and other works have been well devised; and, with the exceptions of leakages at Doe-park reservoir and at Barden, appear to be well executed. That the rule as to the bywash space adopted by the engineer in proportion to the area of the several grounds is ample. That outlet culverts and valve wells designed by Mr. Leather on the Bradford reservoirs are very much to be preferred to cast-iron pipes laid through or under the deepest part of the embankment. That reservoir embankments are liable to subside for several years after they have been made. That such subsidence should be immediately attended to, so as to preserve the embankment at the full height above the overflow, as designed by the engineer. That at all reservoirs where water is impounded by the embankment, as at Doe Park and other large reservoirs, there should be a night and day watchman or attendant. Below Doe Park are working colliery shafts within reach of a flood such as occurred at Sheffield. There is much valuable property on the stream below. This reservoir at the time of inspection was in a dangerous state; and the utmost care should be taken to make the work of its embankment secure so as to avoid risk in future. This latter remark applies also to Barden reservoir embankment."

IRELAND.

ON the South Mall, Cork, at the corner of Warren's-place, facing the Corn Exchange and Anglesea Bridge, the Provincial Banking Company are erecting a commodious branch establishment, in the Palladian style, which will present a frontage of 163 feet. The material used on the exterior is the limestone of the district. The chief carved work, however, will be executed in Portland stone. Above a rusticated basement, broken by moderate projections and an arcade with boldly-carved keystones, containing windows, niches, and a central doorway, a Corinthian order of three-quarter columns is carried around the two exposed sides of the building, having a rich entablature with modillion cornice, crowned by a panelled attic over each intercolumniation or bay, a semicircular panel for bas-relief and foliage. The semicircular heads of the first-floor windows, sixteen in all, will be filled with the coats of arms, in cut stone, of the principal commercial towns of Ireland. A pediment surmounts three intercolumniations in the middle of the South Mall front. The course at the level of the capitals will be executed in Portland stone, enriched with carved festoons of flowers, slung from capital to capital.

The interior of the public office will be of a highly decorative character. The lighting is chiefly obtained through a domed light in the ceiling, the first-floor windows of the Mall front affording the remainder. The trimmings of doors, fireplaces, &c., will be of Caen stone, enriched with carving. The ceiling and walls will be decorated in Parian cement, carved. The floor of the space intended for the public will be laid with Minton's encaustic tiles, in pattern specially designed. Two larger fireproof safes adjoin the public office. The cost will be about 15,000*l.* Mr. W. G. Murray, of Dublin, is the architect; Mr. Alexander Deane, the contractor. Mr. Pierce is clerk of works.

Extensive additions are at present being made to the Constabulary Depôt in the Phœnix Park, Dublin. The new works comprise an officer's mess-building, with dwelling apartments for eight sub-inspectors; also dormitories for sixty cavalry men, with stables to accommodate the same number of horses.

The style is of an eclectic character. Considerable freedom is exhibited in the treatment of the details. While the chief of the walling is of yellow bricks, coloured materials, red and black brick, and tiles are introduced.

THE ARCHITECTURAL ASSOCIATION.

THE ordinary meeting of members was held on Friday (the 13th inst.) at the House in Conduit-street.

The chair was occupied by the President, Mr. T. Roger Smith.

The special business brought under notice had reference to certain alterations in the rules of the Association, and also included the consideration of the report of the delegates appointed to attend the meeting of the Architectural Alliance.

It was proposed that in future the election of members should be decided by show of hands instead of ballot, except in any case in which any member intimated a desire that a ballot should be taken. Some discussion ensued upon the propriety of the alteration, the mover of the resolution in favour of the change asserting that the ballot consumed much valuable time, while no case had ever occurred of a candidate being rejected; and the opponents of the change dwelling upon the desirability of maintaining the ballot as a safeguard to prevent the admission of candidates who might be ineligible. Ultimately, however, the alteration was agreed to without a division, on the understanding that any member was to have the privilege of publicly or privately demanding a ballot.

The next subject introduced was the desirability of altering the time of meeting from eight o'clock to half-past seven; and the time of adjournment from ten to half-past nine. After some discussion, a motion to that effect was put from the Chair and agreed to.

Mr. L. W. Ridge (Hon. Secretary) having brought up the report of the delegates to the Architectural Alliance,

Mr. J. D. Mathews (Hon. Secretary) read the resolution agreed to by a committee of the Association, assisted by some of the senior members, on the scale of architectural charges as proposed by the Alliance at their meeting in July last. It was to the following effect:—

"That the Architectural Association has carefully examined the list of charges proposed by the Alliance, and approves of the introduction of a clause stating the custom of charging a reduced percentage, in certain districts, with reference to mills and other large and simple buildings, though the custom does not obtain in London. They also approve of a revision of the charges mentioned by the Royal Institute of British Architects, for valuations,—a subject, however, which ought not to be omitted from a complete list of charges. They also cordially approve of the clause with reference to quantities, and they do not object to the other variations from the list of the Institute, but they think in each of those cases it would be most injurious to the profession to have two published lists of charges, and they would therefore recommend, that on these subjects a conference be obtained in the Royal Institute of British Architects, in order that both the present provincial practice as regards the first mentioned, and the special importance of the last mentioned subject may be more fully represented in a list of charges available for the protection and use of the whole profession. The Committee have suggested certain modifications in the details of the proposed Alliance scale which are recommended to the consideration of the delegates."

The Chairman in moving the adoption of the foregoing resolution, observed that the charges of the Alliance were substantially those of the Institute with certain modifications. The latter were the points which the Association had now to consider. Many of the delegates attending the last meeting of the Alliance found that the London charges, as laid down by the Institute, were not such as would suit the districts in which their practice lay. London architects did not, for instance, accept less than 5 per cent. commission for any works undertaken by them; while in Manchester and in the north of England the scale of remuneration might be taken at between 2½ and 3 per cent. Again, with respect to valuations, it was considered that the custom in the country differed so much from that which prevailed in town, that certain modifications had been proposed. With respect to taking out quantities, in some parts of the country architects took them out themselves, and in many districts it was held that the "quantities" ought not to be a document which should be kept unknown to the employer. The committee of the Association, to whom these points had been referred, had considered the matter with much care and deliberation, and had agreed to

the resolution now submitted for the approval of the meeting.

After a short discussion, in which Mr. Blashill, Mr. Henry, Mr. Ridge, and other gentlemen took part, the resolution was agreed to *nem. con.*

The following gentlemen were subsequently elected delegates on behalf of the Association to the ensuing meeting of the Alliance:—Mr. T. R. Smith, Mr. Blashill, Mr. Rickman, and Mr. Bunker.

The Chairman announced, that on Saturday, the 28th inst., the members of the Association would be afforded an opportunity of inspecting the works of the new Langham Hotel, in Portland-place.

The next subject for the class of design is a Baptistery; and on the 27th inst. Mr. J. W. Penfold was to read a paper on "Metropolitan Improvements."

LEICESTER SQUARE.

HERE, in the heart's core of London—the habitat of the stranger, and the centre of traffic—a place long noted for exhibitions—where trade, theatres, and taverns are compacted together,—there is an open space which in any other city would be prized and kept neat, if not adorned with plantations, statuary, and fountains; and yet it has been suffered to remain for years a disgrace to the metropolis!

It might be supposed that the recent Act in this respect, empowering vestries and corporate bodies, should save the chief squares from disfigurement, waste, and pollution; still, no attempt has been made by the busy occupiers of valuable abodes and magazines surrounding this square to improve the ravaged condition of the inclosure, which not many years back shone in luxuriant blossom, and was not then an inappropriate *locale* for the equestrian statue in the centre.

The wreck of an iron railing still stands *in frame*, with breaches on all sides for the admission of idle boys; a few of the shrubs survive the dissolution of the Great Globe; and the mutilated statue, with one leg, astride a goblin horse on three legs, propped by stakes, serves as a mockery of royalty!

One is tempted to ask, is the condition of this inclosure of no value to the warm tradesmen and residents who look down upon its disgusting ruin? And would not the repair and ornamentation of the space, at a trifling cost, too, enhance the value of all the surrounding property? Little as the blot may be, it is a *national stigma*. A pleasant visitor of the Sablonnière insists that the effigy is not a wreck of the *Royal George*, but the Cockney boys' idol Guy Fawkes, *en permanence*; and that on every 5th of November the figure winks an eye, and the horse wags his tail. Whatever it may be, the square has truly gone Wylde.

M. A.

AN APOLOGY FOR SHAMS.

SIR,—Of invectiveagainst shams we have more than enough, for the most of it seems to be no other than downright hypocrisy, or else downright stupidity. To speak of all deception, however innocent and agreeable it may be, as being arrant falsehood and lying; to denounce, as some have done, the graining of doors and other imitations of more costly materials, as deserving to be put into the same category with fraudulent impositions—with that of forging bank notes, or, perhaps, a will—betrays a very queer sort of morality—pharisaical scrupulosity greatly overacted—a sort of conscientiousness so exquisitely fine as to be as delicate, consequently as flimsy and fragile, as a veritable cobweb. It is, in short, the very caricature of moral conscientiousness. One thing which cannot possibly be denied by any person of common sense is that good—nay, even very superior—taste may be shown, be the means employed for exhibiting it ever so cheap, just as the reverse may be ostentatiously paraded with the most expensive materials. Where the general effect is not only pleasing, but, perhaps, even captivating, the taking exception to innocent licences, as graining and similar deceptions, seems to me to argue a sad lack of æsthetic sensibility. What would be paltry in a patrician palace may be more than pardonable—even praiseworthy, in an every-day parlour, provided it be done with discreet reserve. "Are we even to have no cakes and ale because thou (John Ruskin) art virtuous (over-much)?" What that writer himself, who has inveighed so grandiloquently against the sin of burying the souls of workmen, says is that at any rate the graining of doors requires on the part of the workman somewhat more of artistic skill, or skilled labour, than does the mere mechanical drudgery of smearing it over with one uniform coat of paint.

Many will dissent from what is here said; but no matter, I am prepared to meet them all, however many, and however formidable, they may be in the columns of the *Builder*.

ART LOVER.

CHURCH-BUILDING NEWS.

Uplowman (Devon).—The parish church, which has been under repair for nearly twelve months, has been re-opened for divine service. The church for some years was in a very dilapidated state, and apprehensions being felt for its stability, Mr. Hayward was called in to examine the structure. He found the piers and arches between the nave and aisle to be considerably out of the upright, partly occasioned by the thrust of the old roof, but still more by that of the chancel-arch, which was in a crippled and even dangerous state. The re-construction of this arch was imperatively necessary, and that of the piers and arches almost as much so. The roof was in a condition which would not admit of its being taken down and put up again; and, in case funds could not be raised for new roofs, the architect advised that tie-rods of iron should be applied to restrain all further thrust, and to wait until money could be obtained for replacing the old with new work. Happily, this has been accomplished without waiting. The chancel was past repair. The church was filled with pews 4 feet high, and disfigured by a heavy gallery at the western end. It being determined to restore the church in a proper manner, a contract was entered into with Mr. Wood, of Lurley, near Tiverton, for rebuilding the piers and arches, new roof to the nave and aisle, new seats, and the restoration of the windows. While this was in progress, the rector determined on rebuilding the chancel. The cost of the resoration has been defrayed partly by rate and partly by gifts, the largest contributor being Mr. Troyte, of Huntsham. The direction of the works was placed in Mr. Hayward's hands. The church is heated by an apparatus of Messrs. Haden's, fixed in a stove-room beneath the vestry. All the windows in the church are filled with stained glass by Messrs. Wailes, of Newcastle. The eastern one is given by a few friends, in memory of the late Mr. Commissioner Bere, the father of the present rector: that on the south is a memorial to the Rev. S. Pidsley, formerly rector, by his widow; and the corresponding one on the north is a gift of old friends and schoolfellows of the present rector.

Plymouth.—The parish church of Charles, still by many called "New Church," has been partially restored and re-opened. The committee placed the restoration or rather improvement, of the church, in the hands of Mr. Hine, architect, under whose direction the north and south porches have been erected, dormer windows of improved character introduced in the roof in place of the former unsightly ones, and the whole interior has undergone a complete change. The most notable features of the interior are the new reredos and communion-rails, and the stained-glass windows of the chancel. The large east window is the workmanship of Mr. Bell, of Bristol: the lower portions are occupied with foliated geometrical patterns, and above in the tracery are the *Salvator Mundi*, and a circle of angels in adoration. The side windows are by Messrs. Clayton & Bell, of London, and are family memorials, representing the Resurrection of Christ, and the parable of the Good Samaritan. Messrs. Call & Pethick were the general contractors. The reredos, which is of Caen stone and marble, was made by Mr. Bovey, and the communion rails by Messrs. Hart & Son, of London. Mr. P. Marshall supplied the gas-fittings, and the painter's work was executed by Mr. Thomas, of Stonehouse.

Eccles (Manchester).—The tender of Mr. W. Huddleston has been accepted in a private competition under Mr. Scott, for the erection of a church and parsonage for Mr. J. Sootle, at the Weaste, Eccles, for upwards of 8,000*l.*, exclusive of boundary walls.

Collyhurst.—We are requested to state that the gas standards, brackets, and cornice in the Albert Memorial Church here were designed and executed by Mr. J. W. Dovey, of Manchester.

Cockermouth.—The new church, the foundation stone of which was laid on the 29th of July, last year, is so far advanced towards completion that the work, as regards the masonry, is finished, and the first timbers have been laid. In order to celebrate this event, the workmen and their friends, to the number of seventy and upwards, met at the Sun Inn, Cockermouth, and partook of a substantial dinner. The chair was taken by the Rev. H. L. Puxley, and the vice-chair by Mr. H. Faithful, of Cockermouth. Mr. Wood proposed the health of Mr. Bruce, the architect of the church; who proposed the health of the contractors, Messrs. Cape & Hepworth. The vice-chairman proposed "The Workmen," coupled with the names of Messrs. Thompson & Archer.

DISSENTING CHURCH-BUILDING NEWS.

Canterbury.—The new Union Chapel in Watling-street is now nearly completed. The building has been erected by Mr. Lancefield, contractor, of this city; the architect being Mr. W. F. Poulton, of Reading. The materials of construction are Kentish rag stone, in courses, and Bath stone dressings, the style being of a mixed order, but with Gothic points and windows. The width of the chapel internally is 38 feet 3 inches, and the length from the front wall to the back of the organ recess, 66 feet. The ceiling is flattened in the centre, with canted sides, the height from the floor being about 28 feet. The inside of the roof is divided into panels by wooden ribs, in which are inserted lights. The walls and ceiling panels are decorated with distemper work, which, together with the other wooden ornaments, are stained. There is accommodation in the chapel for 500 persons. Underneath and occupying the whole are school and class rooms. The total cost of the erection, inclusive of lighting, fencing, schools, &c., is about 2,100*l.*

Levenshulme (Lancashire).—The corner-stone of a new chapel, in connexion with the United Methodist Free Church, has been laid at Levenshulme, by Sir James Watts. The site of the chapel is immediately contiguous to the high road. The chapel will accommodate 300 on the ground-floor, and about thirty in the singers' gallery. Vestries, apparatus room, &c., will be built at the back. The design is Italian, of the thirteenth century; and the leading features are a square brick tower, with splayed pilasters and slated spire, 85 feet high, with open belfry, having a series of pointed arches resting upon cast-iron columns with foliated capitals and stone springers. The front elevation (to Stockport-road) has a two-light traceried stone window, with four-light window underneath, the whole set in a deep recess with splayed jambs and arch. The various window arches are formed with red splayed and blue bricks alternately. The roofs have "lunettes" and bands of green slates. Hartley's diamond embossed glass will be inserted in the windows, which are made to open. There will be a platform and communion, but no pulpit: the pews are without doors: a portion of the roof-timbers will be exposed below the ceiling line, and these, with all other woodwork, will be stained and varnished. The chapel will be built of machine-made bricks, with dressings of Halifax stone. The committee purpose, when the funds permit, to erect detached schools, with class-rooms, land sufficient for the purpose having been secured. The chapel, with its entire fittings, heating apparatus, &c., will cost 1,200*l.* The architects are Messrs. Whyatt & Redford, of Manchester.——The foundation stone of a New Wesleyan Methodist chapel has also been laid at Levenshulme. The site is an open plot of ground, on the right of the Stockport-road, nearly opposite the Mechanics' Institute. The style of the building will be English Gothic, of the geometrical period. The chapel is to be completed and ready for occupation early next spring, and it is intended to add a minister's house and school adjoining, for which purpose land has been secured. The cost of the chapel will be 2,400*l.*, and altogether about 3,000*l.* will be required. The contract has been given to a Stockport firm. The architects are Messrs. Paull & Ayliffe, Manchester.

Stockport.—A new Congregational chapel is to be erected in Wellington-road South, in place of the Orchard-street chapel, which is too small for the congregation, and has become impaired. The Bicentenary Committee are likely to aid in the erection, and 700*l.* have already been subscribed.

Dewsbury.—A new Independent chapel is to be erected at Dewsbury, near Wakefield. Mr. M. Oldroyd gives the land, and his firm have

promised 3,000*l.* towards the erection of the edifice.

Tadcaster.—The foundation-stone of a new Primitive Methodist chapel, with school-room, has been laid. The chapel, &c., is to cost 800*l.* Mr. J. Wright, of Hull, is the architect, and the contractors of the building are Mr. E. Bilbrough, of Tadcaster; Mr. D. Whitfield, and Mr. G. Bailey, of Wetherby.

SCHOOL-BUILDING NEWS.

Henley-on-Thames.—The schools at Kidmore End, Oxon, having been recently enlarged, and a mistress's house, &c., erected, from designs by Mr. Horace Jones, architect to the city of London, at a cost of 600*l.*, have been formally re-opened by the bishop of the diocese.

Balcombe.—In connexion with St. Nicholas's College, a movement is going forward for the erection of new buildings at Ardingly, near Balcombe, to accommodate the third, or Lower Middle Schools, for education after the manner of the great public schools, and at the lowest practicable cost. The portion first to be built, for reception of 200 boys, has been contracted for at 4,600*l.* Earl Granville is expected to lay the first stone.

Weymouth.—The new building for the grammar schools has been commenced on a site near St. John's Church, on the Dorchester-road. The plans are by Mr. Crickmay, of Weymouth, architect.

Kidderminster.—The new schools for the Independents have been opened. The staircase and doorways are wide, affording means for ready exit: the seats are heated by warm-air apparatus. There is one large room for evening lectures, public meetings, and school purposes, on the second floor: the ground floor has six class-rooms, and a larger room, which will hold 120, for prayer and other meetings; a side room for a library; and a minister's vestry, which opens into the chapel, where some slight improvements have also been made. About 2,000*l.* will be required to pay for the rooms, of which more than 1,300*l.* is in hand. The architect was Mr. A. Johnson, of Birmingham; and the contract has been carried out by Mr. Wilkinson, of Derby.

Trecastle (South Wales).—A national school building has been erected here. The building comprises a room 51 feet long by 20 feet broad and 16 feet high, with a class-room 18 feet by 15 feet, of similar height, forming a wing at the east end. Over the entrance a tower is erected, which contains a clock and bell, supplied by Mr. R. Webb, Brecon. There is a house for the schoolmaster, and also a playground attached to the school.

Mellor (Derbyshire).—New parish schools and teachers' house are about to be built here. The site and a liberal contribution have been given by one of the chief landed proprietors in the district. The new schools are shortly to be begun, from designs prepared by Mr. J. Medland Taylor, of Manchester, architect.

Stanley.—New schools have been opened here. The building, designed by Messrs. Hine & Evans, of Nottingham, is in the Gothic style. The entire cost of the building, with needful fittings, is over 300*l.* There is accommodation for 136 children. Mr. Brown was the builder.

Harborne (Staffordshire).—The members of the congregation worshipping in the Baptist chapel, Harborne, have for a length of time felt the need of a suitable building in which the instruction of the children constituting the schools in connexion with it might be carried on. Accordingly, contributions were solicited, and the building fund being speedily guaranteed, Mr. Phipson, architect, was intrusted with the preparation of the design, and Mr. Mathews, builder, with the carrying out of the undertaking. A suitable site was obtained immediately at the rear of the chapel, and the foundations having been put in, the ceremony of laying the corner stone has just taken place. The new school-house will be a building, in red brick, with blue brick dressings, and will accommodate some two hundred. Its cost will be about 220*l.*

Crowle (Lincolnshire).—The new schools recently erected in this parish have been opened. The plans and estimates were obtained from Mr. Hopkins, consulting architect to the Worcester Diocesan Society, and the contract for building sent in by Mr. Shelswell, of Worcester, was accepted. Accommodation is provided for upwards of 100 children, including infants. It is built of brick, with Bath stone dressings, and alternate white and grey stone in the arches of the doors and windows. A band of ornamental brickwork surrounds the school part of the building, a residence for the master and mistress being at the western end, and the whole is enclosed in a brick and stone fence. The principal room is 42 feet long by 18 feet wide, with a steep-pitched roof of open timber, the principals resting upon stone corbels. In the east wall is a Decorated window, and there are square-headed mullioned windows in the side wall. There is also a class-room, with lofty roof, and lighted by a three-light trefoil-headed window, and a cloak-room, entrance-hall and porched doorway. The entire cost was between 700*l.* and 800*l.*

St. Anthony's, Newcastle-upon-Tyne.—The new national schools at this manufacturing village are now nearly completed. The building is in the Elizabethan style, of brick, with stone dressings, plain in external appearance. The school and class-rooms will accommodate 200 scholars, and the total cost will be about 700*l.*, exclusive of the site, which, together with a liberal pecuniary contribution, has been given by Sir Walter and Lady James, the owners of the estate. The buildings consist of a school-room, 65 feet by 18 feet, having a wing or transept on the north, 25½ feet by 18 feet, and a class-room, 18 feet by 13 feet. Two extensive playgrounds, with the usual offices, are attached. The addition of a teacher's residence is contemplated. Mr. S. Oswald is the architect.

PROVINCIAL NEWS.

Luton (Beds).—A meeting has been held in the Town-hall for the purpose of considering the best site for a new Corn-exchange for this town. Four plans were produced, and eventually one for erecting a corn exchange and assembly room, with plait market, &c., at a cost of 8,000*l.* was provisionally adopted.

Chatham.—The erection of the block of buildings in the New-road, forming the new police-court, at Chatham, having been completed by Messrs. Naylar & Son, the work of fitting up the interior is now being carried out under the superintendence of Mr. H. Bulmer, the architect; and the building is expected to be completed, and in all respects ready for the administration of justice, towards the end of the ensuing month, when the whole of the magisterial business connected with this division of the county will be transacted in the new courts. The new buildings, justice-room, police quarters, &c., cover a considerable extent of ground. The principal justice-room is some 40 feet in length, with a breadth of about 25 feet, and is lighted by a lantern-roof. The cells for the prisoners are below the court, with which they communicate. They are all about 10 feet in length by 7 feet in breadth, and accommodation is provided for twenty prisoners. The cells and all the passages are heated by means of hot water pipes. A building has been erected for the residence of the superintendent of police, together with stables, coach-house, &c. The building has a frontage of 150 feet and a depth of about 130 feet.

Brighton.—The proposal to erect a new workhouse for this parish, on the site already purchased for it, has been favourably received by the ratepayers, and a resolution passed approving of the plans prepared by the parish surveyor.

Swansea.—The new Sailors' Home has been opened. The building affords accommodation for 120 inmates. The total cost will be about 3,700*l.*, of which 700*l.* are still awanting.——A new music-hall has also been opened here. The hall is a plain edifice, some 122 feet long, 52 feet wide, and 45 feet high. It affords accommodation for 2,350 persons. Messrs. Thomas, Watkins, & Jenkins were the contractors, and Mr. W. Richards the architect. The committee appear to have been limited to 3,000*l.* for the whole outlay on the building. The hall is lighted by 470 star lights, manufactured by Messrs. Winfield & Son, of Birmingham.

Macclesfield.—The erection of the buildings at the corner of Chestergate and the Market-place, for the Macclesfield Branch of the Metropolitan and Provincial Bank, will be forthwith proceeded with. There were three tenders sent in, viz. by Mr. John Evans, Macclesfield, 3,900*l.*; Messrs. Thackrah & Peirce, Stockport, 3,882*l.*; and Mr. W. H. Brown, of Stockport, 3,800*l.* The last has been accepted. Mr. Stevens, of Macclesfield, is the architect.

Books Received.

Blythe House. London: Virtue, Brothers, & Co., 1864.

From a little pile of reading-books that have reached us, we take one which, if we mistake not, will grow in reputation with the public. "Blythe House" is an interesting story in one volume, which, without intruding any purpose beyond entertaining the reader, is full of excellent teaching, conveyed in a charmingly clear and pure style; and may be placed in the hands of either sex, and of all ages, not merely without fear, but with unquestionable advantage. The *dramatis personæ* are the flesh-and-blood men and women of to-day, such men and women as most of us know; and the story is told so naturally and unaffectedly as to give it the air of a truthful relation, and to fix without artifice the attention of the reader. Sister Milly, Jamie Mackinnon, and good, blunt Mrs. Carron, are henceforward prized acquaintances. Not to trench on the story itself, we quote a detached paragraph, to give an idea of the writer's style. The pain of parting is being spoken of:—

"Whatsoever the Future may have in reserve for us, yet the dear, familiar Past, with which we have grown lovingly intimate, can never be restored; and therefore we cannot fail to feel regret, as we see it receding from our view, how bright soever may be the prospect the coming years spread out before the mind's eye. The scenes through which we are henceforth to travel may be more lovely than those to which we are bidding adieu; but they possess not, as yet, the charm of old association; and, until they have won this endearing characteristic, they may fascinate the eye, but they cannot touch the heart. And how utterly vain is the attempt to reproduce the Past! We may, in our hopeless longing, gather again the selfsame persons in the old, familiar scenes, but yet how hollow and unsatisfactory is the result. We have changed; they have changed; outward nature has changed; the very trees and flowers are no longer exactly as they were; and though apart the alteration may be so trifling as not to be perceptible, yet bring once more together these various component parts of the former stratum of life, and we find they will never again agglomerate as of old. No. No skill or magic can reproduce the Past."

Such of our readers as sometimes ask us to point out a good sound story for them to buy will thank us for telling them of "Blythe House."

VARIORUM.

"Remarks on the defective and inadequate State of the Patent Museum." By J. T. Scott. 1864. As remarked by the author of this pamphlet, a sum of 200,000*l.* having already accumulated from the Patent Office, this fund not only might but ought to be appropriated to the erection of a suitable building in the most central and convenient part of London. At present the Patent Museum consists only of a very small part or corner of the South Kensington Museum; but it is to be hoped that ere long it will stand apart as a museum in itself. There are, no doubt, abundance of curious and interesting objects of a fitting description already in existence—not to speak of future acquisitions—to form an extensive as well as interesting and instructive museum. Already, indeed, there is a good nucleus for such a collection. The author of the pamphlet under notice gives a cursory review of the sources available in the accumulation of such a museum, and instances, among other examples, the original press at which Benjamin Franklin worked, and which Mr. Wyman, of the firm of Cox & Wyman, has kindly presented to the Patent Museum. This press was for many years in their printing-office in Great Queen-street (the printing office of the *Builder*, by the way), and it is even believed that Franklin worked in that office, which is the oldest established printing-house in London. What a multitude of curiosities—not necessarily restricted as they need be to inventions, and models of inventions, in themselves, patented—an extensive patent museum might contain?——A miscellaneous pamphlet has been published by Westerton, of Hyde Park Corner, the title of which will sufficiently indicate its contents: it is called "Hints on National Defence, on Matters connected with Art, and on other Subjects; including one for Trisecting an Angle; together with a Corollary derived therefrom for rectifying the Circumference of the Circle; also a Corollary proposed therefrom for squaring the Area of the Circle. By Sampson Sandys." As to the squaring of the circle, all we need say is that the author admits he is "not a mathematician."——"Practice of employing certain Substitutes for the genuine Ingredients in some Articles of daily Food, considered as it affects the Health of the Community. A Paper read before the Brighton Literary and Scientific In-

stitution; contributed by a Lady." London: Lewis, Gower-street. The chief object of this paper is to expose the tricks played with baking powder, egg powder, &c.——"Expeditions on the Glaciers." By a Member of the Alpine Club. London: Spon, Bucklersbury. This is a readable collection of papers which appeared in *Colburn's New Monthly Magazine*. We find from it that of ninety-eight ascents of Mont Blanc down to 1855, no fewer than sixty-one were by Englishmen.

Miscellanea.

HYDRAULIC TUBE DRAWING AND STEEL ORDNANCE.—Our readers would observe amongst the advertisements of the *Builder* an announcement that a new company is being formed to carry out certain patents for steel tube drawing. The object is an important one, and the patents have already been worked experimentally, in Paris, for nearly two years. If good steel tubes, at practicable prices, can now be formed, as it appears they can, a difficult problem of hardware manufacture has been solved, and a new branch of business of extensive utility will be established. The invention is applicable to tubes of all kinds and in every description of metal, and especially to iron, lead, and tin gas-tubing, boiler tubes, and surface condensers, hollow piston-rods, axles, and shafting; and a large field opens for it in the formation of steel barrels, or iron ones lined with steel, for rifles and other small arms, and also for heavy ordnance. The capital of the company, as will be seen, is 150,000*l.*, in 15,000 shares of 10*l.* each. Mr. J. E. M'Connell, C.E., is the company's consulting engineer, and the temporary offices are at 160, Gresham-house, Old Broad-street, London.

LITERARY FUND DINNER.—The amount subscribed at the recent dinner, whereat the Prince of Wales presided with great success, exceeds very considerably the amount roughly ascertained on the occasion. Several donations have been sent in since;—for example, 100 guineas from Messrs. Coutts & Co.; and many of the stewards have not yet announced their intentions. The total may be safely called 2,400*l.* An alteration was made in the order of the toasts on this occasion which will doubtless be followed elsewhere. It has long been the custom to let the chairman's "health" follow the toast of the evening, which brings the chairman's work all together. At the dinner in question, however, the latter toast was postponed to the end of the evening, and with manifest advantage.

THE NEWSPAPER-PRESS FUND DINNER. — At the inauguration dinner of this association, the donations announced amounted to no less a sum than 1,400*l.* The speaking was exceedingly good, and the musical entertainment unexampled in excellence. The introduction, however, of so much music at a dinner—a complete concert, in truth—was a mistake, and should not be imitated. If it had been given on a separate evening it would have brought the fund 100*l.* at least, and the dinner would have been more manageable. The greatest credit is due to the stewards and the committee for attention to the comfort of their guests. All persons connected with the newspaper press should at once join the association as a matter of prudence, if on no higher ground.

NEW BRIDGE OVER THE MERSEY.—The Rixton and Warburton Bridge Company are about to erect an iron bridge over the Mersey, about seven miles above Warrington. The bridge will be of one span of 130 feet, and approached by 12-yard roads, on the Rixton and Cheshire side of the river. The road will be about 1,000 yards in length, and, on the Lancashire side, about 300 yards. The directors have approved of the plans; and, as will be seen by our advertising columns, tenders are invited for the work. Mr. B. P. Coxon, of Warrington, is the engineer.

A GREAT BLAST.—An enormous blast has been made by the contractors under the Tyne Improvement Commissioners at the Trow Rocks, South Shields. 2,400 lb. of gunpowder were used; and it is estimated that 20,000 tons of rocks were dislodged. Immense fissures were rent in the rock, and huge masses of stone, many tons in weight, were tumbled over in all directions.

SOUTH KENSINGTON MUSEUM.—During Whitsun-week, 16,005 persons visited the museum.

OUTRAGE BY BRICKMAKERS' SOCIETY MEN. At Pendleton Mr. Benjamin Armitage, nephew to Sir Elkanah Armitage, has in course of erection a new mill. When the men left work on Saturday some portions of the building had been erected to the height of nine feet, and other parts to a height of six feet. The bricks used were machine-made. The watchman, named Goodwin, who had been some time in the employ of Mr. Armitage, was taking his ordinary rounds on Saturday night, accompanied by two dogs; and shortly after twelve o'clock about forty or fifty men came up, with blackened faces, and armed with sticks. They accosted the watchman, and three or four of the ringleaders knocked him down with bricks. While he was on the ground in a partial state of insensibility, he was brutally kicked and ill-treated, and was made to lie on his face. One of the men was armed with a loaded stick, with which the watchman was struck repeatedly over the head, while the other men called out several times "Kill him." On hearing these exclamations, the man who first struck Goodwin interposed, and prevented them carrying out their murderous threat. While this scene was being enacted the other men were engaged in the object for which they had come—viz., the demolition of the building. One of the dogs was killed, but the other bit one or more of the men very severely, causing them to shriek with the pain. The six-feet-high walls were knocked down, and damage was done to the extent of nearly 50*l.* Information was given to the police; and after Goodwin had received medical assistance he was able to describe some of his assailants. A reward of 20*l.* has been offered for the apprehension of any of the men.—*Manchester Examiner.*

THE FALL OF A CHIMNEY AT SADDLEWORTH.—The inquest on the ten persons killed at Greenfield, in the Saddleworth valley, by the fall of a factory chimney, has been held. From the evidence given it appeared that the fault was in the foundations of the chimney. A professional architect and builder, who had been called in to assist the jury with his opinion, said the upper part of the chimney was very well put together, but the foundation was defective. It further appeared that the work had been constructed by Jackson, a working mason, under the sole instructions of Mr. J. H. Whitehead, one of the partners of the firm; and that no professional architect's plans or advice had been obtained. The jury returned a verdict censuring Jackson for his negligence in the construction of the chimney; but they did not consider the negligence sufficiently gross to amount to manslaughter. They were also of opinion that Mr. Whitehead ought to have appointed a competent person to superintend the construction of the foundation during his absence.

THE PROPOSED IMPROVEMENT IN PARK-LANE.—At the meeting of the Metropolitan Board of Works on the 20th, Mr. Tite, M.P., brought forward the motion of which he had given notice—"That it be referred to the Streets Committee to consider the steps which have been taken by this Board with reference to the improvement of the south end of Park-lane, and to report to the Board generally thereon." He said plans had been made years ago, when the proposal was to spend 172,000*l.* upon the improvement, which the parish would not assist. He now asked the Board to refer this matter, so as to see what could be done. Major Lyon seconded the proposition. Mr. Legg, Mr. Jeremiah Long, and other members spoke against the proposition, which, on a division, had—for, 13; against, 13. The chairman voted in favour, and the reference was therefore carried.

PNEUMATIC DESPATCH OF PASSENGERS. — The Pneumatic Passenger Railway Company have been constructing an experimental tube, a quarter of a mile long, in the grounds of the Crystal Palace for the conveyance of passengers. The success attending the working of the tube for the despatch of letter-bags from Euston-square to the Post-office has induced the Company thus to experimentalise upon a larger scale.

SURVEYORS.—Mr. Thomas Hicks has been appointed surveyor of the Chippenham Highway district, at a salary of 200*l.* per annum.——At Stockport, the Public Works Committee, subject to the confirmation of the Council, have selected, from sixty-seven candidates, Mr. Alexander Taylor, of Scarborough, to fill the office of surveyor to the corporation, at a salary of 250*l.* per annum.

ARCHITECTURAL EXHIBITION. — On Tuesday evening Mr. Aitchison delivered a lecture "On the use of Iron for Architectural purposes." The lecturer gave a succinct description of the merits of iron for building purposes, and its advantages in many respects over other building materials, such as stone, brickwork, timber, &c.;—firstly, from its greater strength; secondly, economy of space occupied (a very important consideration in cities where space is valuable, and therefore obliged to be economised); and thirdly, additional safety arising from its incombustible character. He combated the opinion that iron was objectionable on account of the difficulty of giving graceful forms to it so as to render it beautiful or pleasing, and contended that, if rightly treated, it might be rendered not only useful, but beautiful also.

PATENTS.—A Berlin letter has the subjoined:—"The Minister of Commerce last year instituted an inquiry to ascertain whether the issue of patents for inventions had not become useless, owing to the progress of industry, and requested the forty-seven Chambers of Commerce in Prussia to give an opinion on the subject. Thirty-one of them have now replied that the abolition of patents would be advantageous in an industrial point of view; while the other sixteen express the opposite opinion. When the same question was submitted to the Chamber of Commerce in 1853, only six were for suppressing patents."

MR. G. H. THOMAS'S PICTURE OF THE MARRIAGE OF THE PRINCE OF WALES.—Mr. Thomas's picture gives a very satisfactory notion of the marriage of the Prince of Wales in St. George's Chapel; and, when reproduced by Messrs. Day in *fac-simile*, will doubtless find a place in many houses of the Queen's loving subjects. It includes nearly 100 portraits. The likeness of the Prince is not so good as are some of the others. The architectural lines on the left of the picture are out of upright, and should be corrected. The arrangement of the numerous figures is well managed.

INDIAN IRON.—The low price at which Indian iron is produced by the rude native process is remarkable. At Tendukera, the price of Kachchà iron is from 3*l.* 3s. to 3*l.* 10s. per ton; and that of Pakka iron from 4*l.* 10s. to 5*l.* 18s. per ton. "It may, therefore, be said," writes Mr. H. Blackwell, "that iron is made here—by the rudest methods and without any machinery beyond the bellows and hammer of the workman—cheaper than it could be made in England, with every mechanical appliance for facilitating the manufacture." Only very small bars, however, are produced by the Hindoos.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.—Last week a lecture was delivered by Mr. Halse, on "The Ethics of Sculpture." The lecturer commenced by inquiring into the principles of the art as exemplified in the works of antiquity. Glancing at the origin of sculpture, he urged that, although rude and grotesque, it was grand and impressive, being identified with religion. This was the basis upon which the Greeks, readily embracing the Platonic dogma of a necessary connexion between the beautiful and the good, built up their immortal art. The lecturer insisted upon a return to severe rules.

NEW STYLE OF LAYING CHIEF STONES. — The London Society of German Gymnasts have laid the foundation-stone of their new hall, near the King's Cross Station. A torch-light procession was formed at night, and amid the singing of national songs and flaming of numerous torches the ceremony was performed. The new building, in addition to numerous offices, will contain a hall, about 80 square feet in size, for gymnastic exercises.

ENCOURAGEMENT OF SCIENCE.—The scientific world of France has been frequently rather startled at the learning and novel views displayed in the mathematical works of a Captain Monheim, of the Artillery, who is a very young man. The French Government, in acknowledgment of his ability, have just appointed him to the Professorship of Descriptive Geometry, at the school bearing that name.

THE ROCHDALE RESERVOIRS.—Mr. Cobden has obtained a promise from the Home Secretary that, at the earliest opportunity, a Government surveyor shall be sent down to inspect and report upon the state of the Rochdale reservoirs, including also the reservoir of the Oldham Corporation, at Piethorn, which is said to be in a very unsatisfactory condition.

Machinery for Sawing Irregular Forms of Wood.—An invention has been patented by Mr. Henry Vrooman, of New York, for sawing timber for shipbuilding and other purposes, whether curvilinear, straight, bevilling, or winding. The log or timber, during the process of sawing, says the *Engineer*, receives but one motion, and that is a straight line, as in mills for sawing logs into straight lumber; all the other motions, whether for curves or bevels of any degree, being given to the saw. The saw is strained in a reciprocating gate or sash, so that it can be turned therein to any angle desired relatively to the plane of motion of the log, the motions for so turning the saw being derived from a guide, which is flexible, and which may be bent and set to any form desired. The steam-engine, by which the saw gate is operated by direct connexion, is mounted on the turning frame which carries the ways on which the saw-gate slides, so that the engine and its connexions with the saw-gate follow the change of position of the saw-gate, whether it be moved to the right or left in sawing curves, or turned in a vertical plane to saw bevels. The feeding motion when set is not varied by the change of positions that determine the line of cut, whether curvilinear, bevelling, or winding.

Strawberry-houses.—The want of a house especially adapted to forcing strawberries has long been felt by professional gardeners and amateurs. The strawberry plant is impatient of great heat, and requires abundance of fresh air with plenty of light to the plant and shade to the pot. An improved strawberry-house has been invented by a Mr. Ingram, and is being manufactured by Messrs. Weeks & Co., of Chelsea, the horticultural engineers. It provides for the light and shade required, and is nevertheless of simple construction, rising by glazed steps with pot-shading facings. The construction is described as being on the cast-iron bracket principle, and requiring no permanent fixing; easily erected, disjointed, removed, and readjusted by any intelligent labourer; and requiring small space only. Each of the sloping roof lights is made to open, and the front boards can be readily removed. The whole is secured by bolts, nuts and screws, so as to render the houses moveable buildings, and thereby tenant's fixtures.

The Drainage of Portsmouth.—At a recent meeting of the Town Council a report as to Mr. Angell's scheme by the Local Government Committee was read. It stated that according to this plan the cost of the main drainage for the upper, middle, and lower levels, including the outfall works, engine-house, and steam-power complete, is estimated at 45,000*l.*; the branch sewerage, connecting the several streets in the Borough with the main sewerage, 37,000*l.*; to which is added, as usual, 10 per cent. to meet contingencies, 8,000*l.*; showing a detailed cost of 90,000*l.* While having every confidence in Mr. Angell, the reporters advised that the plan should be submitted to some eminent practical engineer acquainted with works of this nature. The council, after some discussion on a proposed amendment to refer the matter back to the committee for further consideration, approved of and adopted the report.

Insects in Wood.—A Kirkcaldy correspondent, R. D., complains of being annoyed, in a recently-built house, with a number of small red insects, which appear on the inside of the lower sashes of the windows, and run up the glass for a foot or two. They are in size and colour not unlike the grains of cayenne pepper. He wishes to know where they come from, and how to get rid of them. He washed the woodwork with solution of corrosive sublimate, but with no good effect. There is a minute insect which is called the red spider, and infests gardens; but whether this be the same we cannot say. A microscopic examination would show the formation of the insect. Meantime, perhaps some other correspondent may know, and can suggest a remedy.

Scottish National Prince Consort Memorial.—Anticipated Open Competition.—We understand that the committee of advice, nominated by the Queen to aid in the selection of a design for the Scottish National Memorial, have received a further communication from her Majesty, which will shortly enable them to announce that they are ready to receive designs from all who desire to compete.—*Scotsman.*

The Dublin Exhibition of Irish Manufactures.—The Exhibition of Irish Manufactures was to be opened on this Wednesday, the 25th inst.

Ice Manufacture.—We extract the following paragraph from the [*Melbourne*] *Argus* of November 22, says the *Adelaide Observer* of 5th December last:—"His Excellency the Governor and several members of the Legislature visited the vestibule of the Café de Paris yesterday, for the purpose of inspecting the huge block of ice noticed in the *Argus*. The ice was manufactured in Sydney by the New South Wales Ice Company, by a system recently invented and patented in the colonies. One of the great advantages of the system is said to be that no chemical agent is combined with the water used in making the ice, and hence it is as pure and tasteless as the ice produced by natural means. We believe that it is the intention of the patentees to organize a company for manufacturing ice in Melbourne, and they hope to be able to supply it at 1d. per lb.; being less than half the price at which it has hitherto been sold here.

Opening of Northampton Town Hall.—This new edifice, designed by Mr. E. W. Godwin, has been opened with due ceremonial. "There was but one shortcoming which struck us," says the local *Mercury*,—"the want of any due recognition of the architect: of course it was an unintentional oversight, but an oversight it was, and to be regretted." Unintentional or not, this is a sort of oversight which is but too frequent.

Bethnal-Green Churches.—The Bishop of London was to add another to the many new churches of Bethnal-green, on this Thursday, the 26th instant. The new church, which is capable of seating about 900 persons, is situate in a densely populated part of the parish, and has an ecclesiastical district assigned to it out of St. Matthias and St. Thomas. The church has been erected at a cost of about 4,000*l.*, and is dedicated to St. Paul.

Waste Electricity to be used up.—At the last sitting of the Paris Academy of Sciences, a paper by M. Loir was sent in by the Minister of the Interior, in which the author endeavoured to show that a quantity of electricity was produced in large factories, and might be turned to account by means of the straps which generated it by their friction in communicating motion to the machinery.

Petroleum as Fuel.—We are informed that an architect (Mr. C. J. Richardson) has discovered and registered a very simple process, by means of which petroleum, or American rock-oil, can be used as fuel for the steam-engine, or any kind of furnace, in lieu of coal, with safety and economy.

Conference on the Houses of the Labouring Classes.—The conference invited by the Society of Arts was opened on Thursday morning as arranged, Mr. W. Hawes, the Chairman of the Council, in the chair. The speakers were numerous and earnest, and we may hope that good will result.

Working Men's Exhibitions.—With reference to the recent Lambeth Exhibition, we are asked to mention that the idea of the Exhibition originated with the missionary (Mr. G. M. Murphy) connected with Surrey Chapel, and was carried out by him and a committee of working men.

Discovery of Castle Ruins in Dumfriesshire.—A huge green mound belonging to the Duke of Buccleuch, at Dumfries, has been opened, and discovered to be the ruins of Castle Tibber, containing interesting relics.

New Rhine Bridge.—A new bridge across the Rhine at Coblentz has been opened with great rejoicings, the King and Queen of Prussia, the Grand Duchess of Baden, and the Duke of Nassau being present.

The National Albert Memorial.—Several sculptors have received commissions. One of the large groups, "America," has been entrusted to Mr. John Bell; another of them to Mr. Calder Marshall, R.A. Baron Marochetti, too, has a part of the work to do.

A Shilling Church.—The church for the erection of which the wife of the incumbent of Tintwistle has been labouring for the last five years, has been realized, and the opening has just taken place.

The Ancient Wall in Albion-terrace, Southampton.—The Town Council have refused, by a majority of 11 to 6, to give 100*l.* for the purchase and retention of this interesting old relic of past times.

TO SURVEYORS AND BUILDERS.

WANTED, by the Advertiser, aged 34, an ENGAGEMENT in either of the above Offices. Has had 15 years' experience in making out drawings, preparing estimates, and taking out quantities, and in measuring and valuing Builders' work of all descriptions. Highest references and testimonials. Moderate salary.—Address, C. F. D. care of Mr. Woolridge, Baker, 2, Willy-terrace, Bow-road, E.

HANDRAILS AND STAIRS.

WANTED, an ENGAGEMENT in the above line.—Address, N. O. T. Office of "The Builder."

TO LAND SURVEYORS, ESTATE AGENTS, &c.

WANTED, to ARTICLE a highly respectable, well-educated YOUTH (aged 16). A liberal premium offered for corresponding advantages. The Advertiser is desirous of treating with such only as are of acknowledged Christian principles and character.—Address, by letter, A. B Post-office, Lewes, Sussex, stating terms, &c.

TO PARENTS and GUARDIANS.—Engineering, Surveying, and Valuing. An excellent introduction for a Youth as Pupil.—A Gentleman engaged in public works, consisting of railways, drainage, &c., has an opening for an intelligent well-educated Youth as PUPIL, and a valuable introduction to the profession would be insured. For further particulars apply, by letter only, to C. D. M. Post-office, Moorgate-street, London.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser, whose Articles have just expired, is desirous of entering into an ENGAGEMENT, in town or country. Good reference. A moderate salary only required.—Address, A. T. 43, Gainsford-street, S.E.

TO ARCHITECTS.

THE Advertiser seeks a temporary RE-ENGAGEMENT in a London Office. Experienced in getting up working and finished drawings. Excellent references, and salary moderate.—Address, W., Cribb's Library, Westbourne-grove, W.

TO ARCHITECTS, SURVEYORS, BUILDERS, &c.

THE Advertiser, a good draughtsman, quantity surveyor and estimator, of long experience, who has had the superintendence of extensive works, and is a thoroughly practical man, as well as used to office routine, seeks EMPLOYMENT, on moderate terms.—Address, W. D Post-office, Sydenham, S.E.

TO PLUMBERS AND BUILDERS

THE Advertiser, a good PLUMBER, is in want of a SITUATION. Understands gas-fitting and glazing; has had charge of shop where last employed.—Address, BROWN, 37, East-treet, Manchester-square, W.

THE Advertiser, aged 22, requires a SITUATION, in a Builder's or Painter's Office. Has filled a similar situation for the last six years. Has also served part of the time at the bench. Can make out his drawings, and take out quantities and prepare estimates. Salary moderate. Excellent references can be given.—Address C. W. 31, College-gardens, Brighton, Sussex.

TO TIMBER MERCHANTS, BUILDERS, AND OTHERS.

EMPLOYMENT WANTED, by a Young Man (in 21st year), of business habits, as JUNIOR CLERK. Understands Bookkeeping; trustworthy and obliging. Good references. Salary moderate.—Address, A. 33, New-street, Regent's Park.

CARPENTER and JOINER, middle-aged, without encumbrance, who thoroughly understands every branch in building, timber measuring, &c., having been many years in London, wishes for COUNTRY EMPLOYMENT. Will not object to take Contract, or to the management as foreman. Reference if necessary.—L. Post-office, London-road, Southwark, S.

A CIVIL ENGINEER, 6½ years' experience on Public Works and in Office, desires an ENGAGEMENT. First class testimonials as to character, energy, and ability. Can design, and take the entire charge of Works. Salary only 25s. weekly, or less. A satisfactory reason can be given.—Address, O. O. Post-office, 5, Lupus-street, Pimlico, S.W.

TO ENGINEERS AND IRONWORK MANUFACTURERS.

A GENTLEMAN is at present open to an ENGAGEMENT to represent an Engineering and Manufacturing Firm in London, on commission and salary. Has connexion with customers, architects, contractors, and builders is considerable. To a house acquainted with London specifications, and competent to price contractors' and builders' general or special bills of quantities for ironwork, machinery, railway plant, &c. the Advertiser would be an acquisition. He is practically acquainted with the profession, and could, where required, undertake the fixing and erection of engineering and other ironworks; and can refer to important Government and other public contracts contracted for and constructed under his direction. Address, "Engineer," at H. A. HARNOTT, Esq. 13, Bedford-row.

TO QUANTITY-SURVEYORS' ESTIMATORS.

A YOUNG GENTLEMAN wishes to ARTICLE himself for one year. He has a slight knowledge of the profession.—Address, E. H. 7, Dorset-place, Dorset-square, N.W.

A YOUNG Man is in WANT of EMPLOYMENT as an IMPROVER to the CARPENTERING and JOINERING and SHOP-FITTING Work, for twelve months. Wages 24s. per week.—Address, S. M. No. 13, Upper Bemerton-street, Caledonian-road.

TO CONTRACTORS.

AS TIMEKEEPER on Railway Works. Thorough knowledge of levelling. Good references.—Address, E. B. 2, Hanway-street, Oxford-street.

TO ENGINEERS, IRON MERCHANTS, AND CONTRACTORS.

A DRAUGHTSMAN, who has had experience in wrought and cast iron girder work, iron bridges, railway station roofing, &c. is open to an ENGAGEMENT. Accustomed to superintend the manufacture and erection of ironwork, quick at taking off quantities from drawings, and otherwise useful.—Address, IOTA, Office of "The Builder."

AN ARCHITECTURAL DRAUGHTSMAN is desirous of EMPLOYMENT in an Architect's Office. Can assist in making working plans from sketches, and is accustomed to copy and trace drawings. Has been for many years draughtsman to a provincial architect. Salary very moderate.—Address, J. C. MYR. Hume, 8, Sidmouth-street, Gray's-inn-road.

TO BUILDERS AND PLUMBERS.

A THOROUGHLY good practical Plumber is open for a JOB or CONSTANCY in London. Good reference can be given. Can turn his hand when slack to Painting or Glazing.—Address, W. W. 12, Northumberland street, Marylebone, W.

Winding dials made and fixed. Also Clock dials adapted to the various orders of Architecture

JOSEPH FAIRER,
188, St George street, East, London,
By Special Appointment to the Queen and to His late Royal Highness the Prince Consort, her Majesty's War Department, &c.

Maker of the Great Clock of the Tower of London.
The Village Clock, price 40 guineas.

TO BRICKMAKERS and OTHERS.—WANTED, 500,000 good PLACE, and 250,000 good STOCKS, for cash. Alongside at Vauxhall.—Address, C. KYNOCH, Builder, 2, Angell-road, Brixton, S.

TO BUILDERS and OTHERS.—Superior RED and STAINED TILES, RED KILN BRICKS, and ORNAMENTAL WARE, in Stock and to Order, at FRIMLIN'S Brick and Tile Factory, Westerham, Kent. Can be put into Medway barges, or on the South-Eastern Railway.

NEW STOCK NOW READY
FINE WHITE BRICKS.
BEST RED BRICKS.

White, Black, and Red Cutters. Also a large assortment of FANCY MOULDED BRICKS & GARDEN EDGINGS, Plain and Ornamental ROOFING and RIDGE TILES, Delivered to Vessels in the Dock alongside the Kilns, in the River Medina

Pattern Sheets, and all information, may be had of R. LANGLEY, Agent, East Cowes-park, Isle of Wight.

BRICKS.—BRICKS of this SEASON'S MAKE are NOW READY for DELIVERY, at J. JOHNSON'S Brickfields, viz.—Child's-hill Brickfield, Finchley road, Hampstead, N.W.; Swan Brickfield, Wallwin-green, S.W.; Rosslyn Brickfield, North-end, Fulham, S.W.—Stocks, Grissells, and Place Bricks, of good quality, at very reasonable prices, for cash, or approved bills.

WEDGWOOD MEMORIAL INSTITUTE, BURSLEM.—To BRICKMAKERS. The Committee would be glad to receive from Brickmakers SAMPLES of RED BRICKS suitable for the external portion of the above Building. The samples to be forwarded, carriage paid, to the Architect, stating the price per 1,000 delivered at the Longport Station of the North Staffordshire Railway.

GEORGE BENJAMIN NICHOLS, Architect.
Heath Chambers, West Bromwich, May 17th, 1864.

BRICKS.—1,000,000 Good STOCKS. A Quarter of a mile from railway-station, half a mile from the Watermeads. To be seen in Maxey road, Plumstead.—Address, W. G. DAWSON, Plumstead Common, S.E.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SITTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of

J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two-fold.

1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.

2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

BRICKS.

MESSRS. J. & W. EASTWOOD have a few freights of COWLEY, SHOEBURY, and KENT STOCK BRICKS FOR SALE, for delivery during MAY.

RED BRICKS, STOCKS, PAVIORS,
PALE and BRIGHT YELLOW CUTTERS. — ROBERT LITTLE, Brickmaker, Slough, begs to inform Builders and the Trade generally that he is now prepared to Supply any quantity of good well-burnt RED BRICKS (either plain, splay, or moulded), suitable for facings. Mr. LITTLE is able to Lend Bricks for London, or any other part, by either the Great or South Western Railways.—The Bricks may be seen, and prices obtained, either at the Field, Slough, on application to R. LITTLE, Great Western Railway, Windsor.

BUILDING GROUND. — TO BE LET, from Michaelmas next, a valuable PLOT of GROUND, adjoining the Lea Bridge Railway Station, with a frontage of 800 feet to the Lea Bridge-road, the total area being 34 acres.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

CITY of LONDON.—FORE STREET and CRIPPLEGATE BUILDINGS.—Valuable PROPERTY TO BE LET by TENDER, on a long Lease or Leases, for rebuilding or other improvements, subject to present unexpired terms: comprising Shops in Fore-street, Nos. 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, and 22; in Cripplegate buildings, Nos. 6, 7, 8, 9, and 10, being the Cripplegate Tavern; also the premises known as the White Horse-yard, occupied by Mrs. Scholes. The frontage in Fore-street is 221 feet 8 inches; in Cripplegate-buildings, 103 feet 6 inches. The whole comprises more than half an acre, being about 23,000 square feet. Possession of a small portion can be given at Michaelmas, 1864; of the larger portion at Midsummer, 1865; and of Nos. 12, 13, 14, 15, and 22, Fore-street, in 1871; and of the Cripplegate Tavern, in 1873. The property may be tendered for in whole or in part, to suit the views of the proposers. The estate is in close contiguity with the Manchester and Leeds markets, likewise with the proposed Finsbury Station of the Metropolitan Railway, and with which it might, no doubt, hereafter be placed in direct communication, and with the terminus of the North London Railway. The site is within three minutes' walk of the Bank of England; and by the new railways, ready communication will be had with every part of the metropolis and suburbs, with the whole of the United Kingdom, and with the docks and port of London Possession may be had as before stated, subject to the materials being sold and cleared away. The day fixed for sending in the Tenders is MONDAY, the 20th of JUNE next.—For permission to view, apply to the tenants or occupiers. The conditions and plans, and conditions of letting, may be seen at the Offices of Mr. RICHARD SUTER, Architect and Surveyor, 25, Gracechurch-street, E.C.

A FREEHOLD MANSION TO BE SOLD.
The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; stabling for eight horses and coachhouses for four carriages; suitable servants' offices, extensive ornamental pleasure grounds, forcing houses, in all 28 acres; gravelly soil; near Sunninghill Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

BUILDING LAND.—Several PLOTS TO BE LET on LEASE for 99 years, in the Park, Highgate. One of the healthy situations in the vicinity of London, with extensive and beautiful views. A new church and a railway station immediately contiguous. Sewers and roads on the most approved construction are being made. Gas and water can be readily supplied.—For particulars apply to T. H. WYATT, Esq. No 77, Great Russell-street, Bloomsbury, W.C.; or to Mr. WHEELER, Builder, South Grove, Highgate, N.

DEPTFORD, Kent.—To BUILDERS, ENGINEERS, SHIPWRIGHTS, SMITHS, MANUFACTURERS, and Others requiring or desiring commodious Tenements or Residences for their workmen, or to societies or individuals wishing to provide improved Dwellings for the Working Classes.—The Corporation of Trinity House, having otherwise provided for the inmates of their establishment known as the Lower Ground Almshouses, at the Stowage, Deptford, comprising Twenty-six distinct Dwellings, hereby give notice, that they are willing to receive TENDERS for LETTING the said HOUSES on a repairing lease for 21 years, or more, as may be agreed. Each house consists of a basement, ground, and chamber story; five having yards and additional offices; and the others can readily have every necessary accommodation added to them. The whole is approached from the street by a centre gateway, and is inclosed within itself as a distinct precinct. These houses are situated in the centre of the large manufacturing district on the South side of the Thames. They are also, from the cheapness of the crossing at the ferry, very conveniently situated in relation to the large district of the manufactories on the opposite side of the river, from Mill-wall and the Isle of Dogs to the localities adjoining. For permission to view, apply to Mr. NORTHWOOD, No. 1, on the Premises. The whole are to be Let by Tender, in the Lot, and MONDAY, the 30th of MAY next, by the day fixed by the Corporation for receiving the Tenders.—For further particulars apply at the Offices of Mr. RICHARD SUTER, Architect and Surveyor, 25, Gracechurch-street, E.C. and where a plan of the property may be seen. P. H. BERTHON, secretary.
Trinity House, March 28, 1864.

BUILDING LAND at CHITT'S HILL, WOOD GREEN, overlooking three different counties, and fronting the high road, eight minutes walk from the station and Alexandra Park, TO BE LET for the erection of superior Villa Residences, which are in great demand in this beautiful locality. Term, 99 years. Money advanced if required.—A plan may be seen, and particulars obtained, on application to S. HEWITT, Architect and Surveyor, 101, Great Russell-street, Bloomsbury, W.C.

BUILDING LAND, Reading, Berks.—FOR SALE, by PRIVATE CONTRACT, in lots suited for the erection of private Dwelling-houses, a total acres of FREEHOLD BUILDING LAND, forming part of the rapidly improving Western Suburb of the Town. The roads on the Estate are excellent. The property is ornamentally timbered, and several portions of it are well fenced in with hedges, and planted with trees and shrubs of many years' growth. Distance from the centre of the Town and three Railway-stations, about a mile. A second Church is being erected in the immediate neighbourhood. Money advanced if required.—Apply to Mr. W. WEEDON, Solicitor, Reading.

IMPORTANT to COAL PROPRIETORS, CAPITALISTS, and OTHERS.—The owners of valuable MINES of COAL, lying within and under a compact freehold estate of upwards of 150 acres, situate about three miles from the important manufacturing town of Blackburn, Lancashire, are prepared to treat for the absolute SALE of the COAL, or to enter into favourable arrangements for leasing the same for a term of years. Good turnpike roads intersect the estate, and the same is within very easy distance of railway and canal.—For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

TO BUILDERS and OTHERS.—BROMLEY, KENT.—LAND TO BE LET, for Building, on Lease, for ninety-seven years, about half a mile from a railway station and adjoining the town of Bromley. Soil, sand and gravel, with a good supply of water.—For particulars, apply to Messrs. PRESTON & DORMAN, 15, Gresham-street, E.C.

BUILDING LAND TO BE LET, on advantageous terms, for 99 years, situate at Merton, Surrey, within ten minutes' walk of the Wimbledon Station, or 45 minutes of the City. The plan of estate can be seen, and particulars obtained, upon application to Mr EDWIN SHALES, Surveyor's Office, Christ's Hospital, Newgate-street, from TEN till FIVE o'clock.

BUILDING LAND TO BE LET on LEASE, in the Lower Richmond-road, within a mile of Putney and Barnes Railway Stations.—Apply to W. K. WOOD, Timber Merchant, Wandsworth.

EXMOUTH.—To BUILDERS, CAPITALISTS, and OTHERS.—Notice is hereby given, that by a recent order of the Court of Chancery, the restriction against leasing for long terms of years, imposed by the will of the late Lord Rolle, and in consequence of which the extensive and beautiful district, situate in the vicinity of the town of Exmouth, and reaching to the villages of Littleham and Bulle-gh-Salterton, has up to the present time been unavailable for building purposes, has been removed, and the Trustees of the property are now prepared to entertain offers for taking the LAND on LONG LEASES. The advantages of the situation, as regards soil, climate, and beauty of scenery, are well known, and are so fully recognised as to render it needless to refer to them more particularly.—All communications are to be addressed to Messrs FREKE, CHOLMELEY, & FOX-TEE, of No. 28, Lincoln's Inn-fields, London, W.C. Solicitors to the Estate.

ALUM BAY ESTATE, FRESHWATER, ISLE of WIGHT.—BUILDING LAND TO BE LET, for a term of ninety-nine years, land tax redeemed. Rent moderate.—Particulars may be obtained of Mr. AUGUSTUS FREERE, Architect and Surveyor, 22, Henrietta-street, Covent Garden, London; of Mr. WILLIAM RAWLINS, Solicitor, Winchester; of Mr. C. F. FISHER, Solicitor, Ventnor; or of Mr. S. M. BAKER, Solicitor, Ryde, where plans showing the disposition of the estate may be seen.—The journey from London via Lymington and Yarmouth, can be accomplished in about five hours.

TO BUILDERS.—TO BE LET, on leases, direct from the freeholders, several valuable PLOTS of LAND, fronting Stanstead lane, and nearly midway from Forest hill and Catford Bridge stations. The water and gas pipes are laid down, and the sewer is made.—Apply to Mr. DAVENPORT, Estate Agent, 35, Bucklersbury, E.C.

WHARF, at CHARLTON, near Woolwich Dockyard.—TO BE LET on Lease, or the Lease TO BE SOLD, a WHARF 200 feet deep, river frontage 178 feet 6 inches, with dwelling house, out-buildings, gantry, frame, &c.—Apply to the Wharfingers, on the Premises, Messrs. CHURCH & CO. Williamstreet, Woolwich; or Mr. HARVEY, 81, Page-street, Westminster.

GROUND in HIGH STREET, Borough. The Governors of St Thomas's Hospital are prepared to receive TENDERS from parties willing to take on a Building Lease, for a term of 80 years from Christmas next, the valuable and extensive SITE of the premises known as the CATHERINE WHEEL INN, and of 193 and 194 HIGH STREET, BOROUGH. Plans and Particulars, with form of Tender, may be obtained at the counting-house of the Hospital, No. 13, St. Thomas's-street, Borough, or at Mr. HENRY CURREY'S office, No. 4, Lancaster-place, Strand, and the Form of Lease may be seen (if desired) at the office of Messrs. CLAYTON, COOKSON, & WAINEWRIGHT, No. 6, New Square, Lincoln's Inn. The Tenders are to be delivered on or before MONDAY, the 6th JUNE, at 12, St. Thomas's street, where the Governors will meet on TUESDAY, the 7th of JUNE, at half-past TEN o'clock, a.m. to consider the same. The Governor" do not bind themselves to accept the highest or any Tender.
HENRY CURREY.
4, Lancaster-place, Strand, W.C. May, 1864.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views.—Apply to A. B. 192 Burnsuodsey-street, S.E.

TAUNTON, SOMERSET.—TO BE SOLD for building First-class Villa Residences, PART of the HOVILANDS ESTATE, in the Parish of Trull, on the road from Taunton to Honiton. This exceedingly desirable property is situated about half a mile from the town of Taunton; it is on an eminence commanding a most extensive view over the far-famed vale of Taunton Dean, and is surrounded by nothing but residences of the best character. Being out of the borough, the rates are very moderate; and gas and water pipes run in front of the land.—For plans and particulars apply to Messrs. LEVERSEDGE & VENN, Surveyors, Upper High-street, Taunton; or, Messrs. JOHN HARE & SON, Estate Agents, North-street, Taunton.

NO. 34, COLEMAN-STREET.—TO BE LET on LEASE for a term of 21 years, from the 24th of JUNE next, a convenient HOUSE, situate in the best part of the street, nearly opposite King's Arms-yard, and in close proximity to the Bank of England. The premises are well adapted for offices or trade purposes, with good lights both in front and at the rear. Tenders to be sent in, in writing, to Mr THOMAS JONES, Vestry Clerk, 1, King's Arms yard, on or before THREE o'clock on WEDNESDAY, the 1st of JUNE next, when the Feoffees of the parish estates will meet in the Vestry-room. Tenders to be sealed, and marked "Tender for 34, Coleman street." The Feoffees do not bind themselves to accept the highest or any Tender.—By request of the Feoffees,
J. King's Arms-yard, Coleman-street, E.C. THOMAS JONES.
21st May, 1864

BUILDING LAND, to LET, 200 feet deep, gravel soil. Delightfully situate, in the best part of Northumberland Park, Tottenham, N.—Apply to Mr. KING, on the Estate.

CORNHILL.—TO BE LET, on a long lease, eligible PREMISES, in the best part of Cornhill, 25 feet frontage, area about 1,000 square feet.—Apply to Messrs. W. H. ALLEN & CO. 13, Waterloo-place, Pall-Mall, S.W.

NEWGATE STREET. — ST. BARTHOLOMEW'S HOSPITAL.—GROUND TO BE LET for Building, with a frontage of about 70 feet, on a lease of Sixty-one years, from Midsummer next, with immediate possession.—For further particulars, apply at Mr. HARDWICK'S Office, 1, Henrietta-street, Cavendish-square.
WILLIAM WILBY, Clerk.
May, 1864

SCULPTOR'S STUDIO.—WANTED, One or more large ROOMS, on the ground-floor, that can be converted into the above. S.W district preferred. The highest references given.—Address, A. B. 18, Bury-street, Eaton square.

NORWOOD.—EIGHT ACRES of FREEHOLD LAND TO BE SOLD, or LET on Building Lease, within two minutes' walk of a station.—Apply to Mr. ABBOTT, Solicitor, 64, King William-street, E.C.

CITY of LONDON.—VALUABLE BUILDING SITE, Bow-lane, Cheapside.—The Court of Assistants of the Worshipful Company of Salters are prepared to receive TENDERS for taking a BUILDING LEASE, for a term of eighty years, of all that valuable PLOT or LAND, containing about 1,100 superficial feet, situate SALTER'S COURT, Bow lane, Cheapside. A plan of the ground may be seen and further particulars obtained on application at the Clerk's Office, at the Hall, in St. Swithin's-lane, Cannon-street, or to the Company's Surveyor, JOHN COLLIER Esq. 26, Philpot-lane, Fenchurch street. Tenders to be addressed to EDW. THOMPSON, Esq. Clerk of the Company, at Salter's Hall, and delivered on or before the 9th of JUNE, next, at TWELVE o'clock at noon.

WHARF TO BE LET or SOLD.—Lea's 61 years. Occupying a valuable position at the Westend, near Victoria Station, having a water frontage of 60 feet, with Office, Crane, and Traveler, enclosed with fishing gates. Well adapted for a Marble or Stone Merchant.—Apply to FULLER, HORNE, & EVERSFIELD, 30, Parliament street, Westminster, or 80, Fore-street, City.

SUNNINGHILL WELLS, near ASCOT, BERKS.—FOR SALE by PRIVATE TENDER, a valuable and picturesque FREEHOLD ESTATE, known as the Wells, Sunninghill, which comprises a dwelling-house which has been used for many years as an Inn, with a large assembly-room, extensive stabling and coach-house, meadows and garden, and pleasure grounds, with ornamental timber and a mineral spring. The property is suitable either for the use for a New Hotel, or for the erection of elegant villa residences, being in the centre of a beautiful district, near to the Race-course, and containing altogether about four acres and a half, with immediate possession. A plan, with full particulars and condition and form of Tender, may be obtained from Messrs DARVILL & SON, & POULTON, of Windsor, the Vendors' Solicitors. The Tender must be sent to Messrs. DARVILL & CO. on or before the 17th of JUNE next, endorsed "Tenders for the Purchase of the Wells, Sunninghill."—The Vendors will not bind themselves to accept the highest or any other Tender.

CHISLEHURST, BROMLEY, and MOTTINGHAM, KENT.—About 500 Acres of FREEHOLD LAND, TO BE SOLD, or LET on building leases, direct from the freeholder, in suitable lots. Most delightfully situated near two railway stations, speedy access to the Crystal Palace, Victoria, London Bridge, and Charing Cross stations.—Apply to Mr. DAVENPORT, 35, Bucklersbury, E.C.

BUILDING LAND TO BE LET, on the East Park Estate, Lower Kennington-lane, S. About five minutes' walk from the Kilpaint and Castle, Newington.—Apply to Mr. SEXBY, 35, Lower Kennington lane, S.

MINTON, HOLLINS, & CO. Stoke-upon-Trent, beg to inform architects, the gentry, and others, that in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional Show room, at their Establishment, No. 50, Conduit-street, London, where experienced draught men will be constantly in attendance, to afford all information required.
DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, stoke-upon Trent.
MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.
IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & SON'S Pattern book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benjamin Hall Works, Broseley, Salop.
May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free
London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, N. Sndly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Juries," page 681, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactures known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION, 1862.
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.
The only imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.

THE GENERAL CONTRACT COMPANY, LIMITED

Incorporated under the Companies' Act of 1862.
Capital 1,000,000*l.* in 4,000 Shares of 25*l.* each, with power to increase.
FIRST ISSUE 20,000 SHARES.
Deposit on application, 1*l.* per share, and on allotment, 3*l.* per share.
Subsequent calls to be at intervals of not less than three months, and not to exceed 2*l.* 10*s.* each.

DIRECTORS.

CHAIRMAN—Daniel Gooch, esq., C.E. Paddington.
R. N. Fowler, esq. Dunsdale & Co. Bankers, London.
R. Michell, esq. Notting Hill, London, Director of the Great Western Railway.
John Ravenhill, esq. Banker, Ashton, Heytesbury.
T. P. Pocock, esq. (Messrs. Pocock & Rawlings), Lothbury and Chippenham.
Guinness Tyler, esq. Clifton, Bristol, Director of the Bristol and South Wales Union Railway.
John Avery Jones, esq. Merchant and Shipowner, Bristol.
Mark White, I., esq. Merchant and Shipowner, Bristol.

GENERAL MANAGER.
Rowland Brotherhood, esq. Chippenham.

ENGINEER
R. J. Ward, esq. Victoria street, Westminster.

SOLICITORS
Messrs. Tanqueray, Williams, & Hanbury, 34, New Broad-street.
Messrs. Goldney, Keary, & Co. Chippenham.

BANKERS.
Messrs. Dimsdale, Drewett, Fowler, & Barnard, London.
Sir William Miles, bart. and Co. Bristol Bank, Bristol.
The North Wilts Banking Company, Chippenham, with all its complete machinery, stock, and tools, as well as the plant and interest in railway and other contracts now in hand.

Mr. Brotherhood has named a very moderate sum for the goodwill of this business. The works (which are all freehold and very valuable), plant, and contracts, are to be taken at a valuation, to be made by competent parties, one-third of the purchase money to be paid on entry.

With such arrangements and advantages, both as regards the well known ability of the General Manager, and the possession of works in full operation, and able to complete any contracts they may undertake, the Directors feel confident as to the success of the Company, having before them the prospect of a large and highly remunerative business. A large number of shares have already been applied for.

In the event of no allotment being made, the deposits will be returned in full. Should a less number be allotted than are applied for, the deposits will be made available towards payment on allotment, or the balance, if any, returned to the applicant.

Applications to be made to the London Financial Association, Limited, South Sea House, Threadneedle-street; the Imperial Financial Company, Limited, Finch-lane; or to the bankers.

Prospectuses, and forms of application for shares, may also be obtained at the several Banks or the Chambers.

The Memorandum and Articles of Association may be inspected at the offices of the Solicitors to the Company.

FORM OF APPLICATION FOR SHARES.

To the Directors of the General Contract Company, Limited.

Gentlemen,—Having paid (or to pay) Bankers the sum of £ ..... being a deposit of 1*l.* per Share on ..... Shares in the above Company, I hereby request that you will allot me that number; and I hereby agree to accept such Shares, or any less number that may be allotted to me, and I authorize you to pay the same upon the Register of Shareholders for the Shares so allotted.

I am, Gentlemen,
Name in full .....
Residence .....
Profession or Business .....
Date .....

THE FREEHOLD LAND and GENERAL INVESTMENT COMPANY (Limited).

Incorporated under the Companies Act, 1862.
Capital 250,000*l.* in 10,000 shares of 25*l.* each.
With power to increase to 1,000,000*l.*
First issue, 4,000 shares.

(Subscriptions for more than half of which have already been promised.)

Deposit on application 1*l.* per share, and 2*l.* on allotment.
Calls not to exceed 2*l.* per share, with an interval of not less than three months.

It is not intended to call up more than 10*l.* per share, but as more capital can be advantageously employed, further issues of shares will be made, in the allotment of which a preference will be given to the original shareholders.

Should no allotment be made the deposit will be returned in full.

DIRECTORS.

SECRETARY (*pro tem.*)
R. N. Collier, Esq.

Temporary Offices: 1, New Broad street court, E.C.

ABRIDGED PROSPECTUS.

The objects of this Company are to purchase, from time to time such freehold or leasehold property in London and its neighbourhood as may present special capabilities for improvement.

The first duty of the Company will be the purchase and development of some first-class freehold properties at the West End, for letting, and the rental to be derived therefrom has been estimated by experienced valuers to produce a sufficient sum to ensure interest and dividend amounting to 15 per cent. and upwards (arising from property ever increasing in value), after making a due deduction for repairs, outgoings, and management; and when these properties are completed and occupied, it is calculated they may be resold at a profit of 50 per cent. to the Company.

Full particulars of the proposed operations of the Company may be obtained at the Offices, No 1, New Broad street court, where the articles of association may be seen; and prospectuses and forms of application for shares may be obtained from the Bankers, Brokers, Solicitors, or at the Offices of the Company.

THE READING IRON WORKS (LIMITED).

LATE MESSRS. BARRETT, EXALL, & ANDREWES.
Incorporated under the Companies Act, 1862.

PROSPECTUS.

This Company has been formed for the purpose of purchasing and carrying on the important and well-known business of Engineers, Iron-founders, and Manufacturers of Agricultural Machinery and Implements, which having been established nearly half a century, has been conducted for the last thirty years by Messrs. Barrett, Exall, & Andrewes.

While these gentlemen will realise by this transaction the accumulated profits of many years, they will yet remain large shareholders, and continue to give their active co-operation in connecting the future business of the Company.

The demand for machinery, both at home and abroad, being so extensive, capital to any extent can be profitably employed in its production, and the recent transfer of so many of the first-class engineering firms in the country to companies formed under the Act of 1862, among whom may be named Messrs. Fairbairn & Co. and Messrs. Sharp, Stewart, & Co. of Manchester; Messrs. John Brown & Co. and Messrs. Cammell & Co. of Sheffield; Messrs. Slaughter, Gruning, & Co. of Bristol, &c. is at once proof of the advantageous character of the principle of association.

A provisional agreement, equitable and satisfactory, has been entered into with the Vendors, which secures to the Company, at a valuation, the freehold known as "The Katesgrove Iron Works, Reading," together with other valuable freeholds and leaseholds, the goodwill, stock in trade, plant, machinery, patent rights, &c.

The Freeholds consist of water-side premises, having a river frontage of 440 feet, with a roadway on the other side, and an average depth of 175 feet, on which are erected the large and commodious foundry, smithy, boiler shops, engineers', fitters', and erectors' shops, replete with the necessary hearths and machinery. The engine-house with its horizontal engine of 40-horse power, pair of boilers, baths, gas-works, offices, &c. as well as the lofty and massive store-rooms, pattern stores, &c. A very large and commodious wood machine shop about 120 feet long by 30 feet wide, and a converted timber yard occupy the site of another freehold.

The leasehold property consists of 10 acres of meadow land, separated by the river Kennet from the Katesgrove Freehold, and easily connected at any time by a bridge.

The engine works contain two additional steam-engines of 3-horse power, one a hoisting engine, on which are the saw mills, stables, wood shops, store rooms, iron house, an iron warehouse, smithy, clock, show-rooms, offices, &c. the whole of which are convenient yet regular.

The connexions and agencies established by the retiring firm, both in this country and in the colonies, as well as throughout Europe, combined with the several prizes gained at various exhibitions, and notably at the International Exhibitions in England in 1851 and 1862, and in France in 1855, for the manufacture of machinery of distinguished merit they have taken throughout Europe, cannot fail to secure to this Company a prosperous future.

As a guarantee of the genuine character of the undertaking, the Vendors have agreed that they will not receive any interest on their shares until a minimum dividend of 5 per cent. has been paid on the remainder of the subscribed capital, which engagement is continued over a period of five years—while Mr. William Exall and Mr. Charles J. Andrewes, who have taken respectively the engineering and commercial management in the business, will, as soon as the transfer is complete, take seats at the Board, and bring to bear their extensive and valuable experience.

Whilst the Directors attach much importance to this agreement with the Vendors, they think it right to state that they have been advised by those capable of forming a correct opinion on the subject, that the Shareholders may fully anticipate a safe and remunerative dividend, and will therefore only add, in conclusion, that of the many enterprises now before the public, few can surpass it in the reasonable expectation, inasmuch as the operations will not be suspended for a single day; its connexion is made, the profits will therefore be immediate, and the Directors have every reason to hope that the services of the present executive staff, which has so long and faithfully served the retiring firm, might be secured to their successors.

Prospectuses and Forms of Application for shares may be had of the Bankers, Brokers, Solicitors, and Secretary, at the offices of the Company, in London or Reading. Each application must be accompanied with a deposit of 20*s.* per share. The articles of Association may be inspected at the offices of the Solicitor, 35, Lincoln's-inn fields, London.

STAINED GLASS WINDOWS for CHURCHES and DWELLINGS.

HEATON, BUTLER, & BAYNE,
New Kang street, Covent Garden, and Retained from Carlington-street, Hampstead road.
Specimens at the Exhibition of Stained Glass Windows, South Kensington Museum.

TO BUILDERS and OTHERS. — For

SALE, the following FRAMES, SASHES, &c. for a Public-house Front:—4 Frames and Sashes, 4 Doors and Shutters, 2 Mahogany-framed Fanlights, and Mahogany Beading for Windows.—Apply at Mr. LEACH'S, Royal George, Tower-street, Westminster-road.

MEDIÆVAL PAPERHANGINGS,

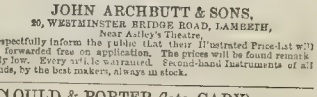
from the Thirteenth to the Sixteenth Centuries. Designed by G. T. ROBINSON, F.R.I.B.A. Manufactured by WM. WOOLLAMS & CO. 105, HIGH STREET, near Manchester-square, London, W. May be obtained of the principal Decorators.

Extracts from notices in the undermentioned publications:—

"Conventionalized patterns, often displaying great beauty of form, characterize the examples sent to us. With a few exceptions, the colouring of the specimens is commendable, in many it is worthy of the highest praise."—*Athenæum.*

"The designs are exceedingly elegant, and the colours good and well arranged. Some of the patterns are of strictly ecclesiastical character, suitable for mission churches and ornaments, or they may be used as accessories in church decoration."—*Church Builder.*

"The majority of the patterns are exceedingly satisfactory, and not expensive."—*Builder.*



"These designs are infinitely varied, yet always consistent and effective; the colouring is pre-eminently good, both in the selection of tints, and in harmonious combinations; and the quality of the paper is of the highest order."—*Art Journal.*

GUTTA-PERCHA MILL-BANDS.—The

Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Driving Bands for Driving bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump buckets, Firebuckets, Bosses, Union Joints, Bricks, Trowels, Boots, Toilet-trays, Curtain-rings, Galvanic Batteries, Tuborpye Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

TEMPORARY OFFICES:—160, GRESHAM HOUSE, OLD BROAD STREET.

ABRIDGED PROSPECTUS.

THIS Company is formed for the purpose of purchasing and developing certain new and valuable Patents for Improvements in the Drawing and Shaping of Metals, and for the Machinery employed therein. By this process Metal Tubes can be produced from the fineness of a needle to the size required for the largest ordnance, and its products may be applied to numberless other uses, with infinitely increased strength and diminished cost.

The Patentees, in order to afford those interested a means of testing the commercial value of their mode of manufacture, have erected a powerful Hydraulic Draw Bench, of 600 tons pressure, at temporary works in London, 67, Willow-walk, Bermondsey, where it has been seen in operation, in consequence of which applications have been received for Licences and Machinery, and from these sources alone a large annual income cannot fail to be derived.

Samples of the manufacture can be seen at the Company's Offices.

Further particulars are given in the detailed prospectus.

Applications for Shares must be made either to the Secretary, or the Brokers of the Company.

DRAWN STEEL TUBES.

FROM "THE TIMES," FEBRUARY 25th, 1864.

"The whole process is neither an invention nor a discovery, but simply a most valuable development of our present means of manufacture, and one which we think will prove as lucrative to its patentees as it will undoubtedly be useful to our steel-producing districts. Just now, however, when our improvements in artillery have taken us to a point at which wrought iron can help us no further, and when artillerists are looking for a steel lining to their guns, this new process is likely to be regarded with unusual interest. If, as the patentees claim, their process can draw homogeneous steel tubes of 8 inches and 10 inches diameter, the long vexed question of trying to make wrought iron guns to stand their rifling would appear to be near its settlement. The perfect ease and immense strength with which the common rifles and fowling-pieces can be lined with steel tubing is shown at the Works at Bermondsey.

The patentees of the machine intend putting up at once a press and dies by which taper steel barrels for the Enfield rifle can be drawn in one piece. More, however, is to be gained by drawing steel tubes for the artillery, though with rifled guns no rifles open, upon a field carriage is likely to be found in the everyday mercantile wants of Sheffield and Birmingham. Steel tubes, badly and expensively as they are now made, are still an everyday want in the hardware districts; and it is only their cost, and the uncertainty of their production, which prevents a hundred-fold their present use. If by this process they can be produced of more than double the strength of the present steel tubes, and at the same price as gas piping, their use in manufacture would seem to be a most endless. For tubing of boilers alone there is enough work to be done to keep all the Lydraulic machinery in England, fitted up to draw steel tubes, going for the next twelve months."

DESACHY'S FIBROUS PLASTER.
GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Oiler's, Oxford-street; Mr Hogarth's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

BARROW LIME.—JOHN ELLIS & SONS, Leicester, are now prepared to DELIVER the best FRESH BURNT BARROW LIME, at their Private Station of the Midland Railway, direct from the Kilns, at 20s. per ton.—The Barrow Lime is well known as a very superior Hydraulic Lime from the Blue Lias Stone.—March, 1864.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and concreting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The limestone can be had in full cargoes, also their cement in barrels which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 66, South John-street, Liverpool.

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks.
The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.
Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Pary's Mine Works, Holywell, Flintshire.
The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents wanted. No applications attended to without a banker's reference.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTURERS OF

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,

For Lighting and Ventilating Public and Private Buildings.

J. D. & SONS beg most respectfully to inform Architects and the Trade, that having been selected to open a West-end Branch, they have taken the DUDLEY GALLERY, EGYPTIAN HALL, PICCADILLY, and at an enormous outlay they have made it replete with every description of lighting mediums, including REGISTERED DESIGNS of MEDIÆVAL GAS FITTINGS, CRYSTAL, BRONZED, ORMOLU, and ELECTRO-PLATED Chandeliers, Brackets, Vestibule Lights, Bronzed and Glass Statuettes.

SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements. Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music-halls, and Public or Private Buildings with Gas, &c.

The usual trade discount allowed, as at their

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH, CITY.

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE ACTION DOOR SPRINGS; SMITH'S PATENT WEATHER-TIGHT WATER BAR; and SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS;

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes street, Leicester-square, London; and SUCH ONLY are WARRANTED

TO BUILDERS AND OTHERS.

WILLIAM SKETCHLEY would call attention to his SAWING, PLANING, and MOULDING TABLE. It is adapted for sawing 12-inch deep and 1 inch thick, and moulding 9-inch wide. It is also fitted with drunken saw and all the cramp for tenoning, &c. &c. The price of this is to prepare 3-inch flooring, 7l. N.B. The table can be applied to any saw table, and will prepare flooring in a first-class manner.—For further particulars apply to WILLIAM SKETCHLEY, Great George-street, Weymouth.

INTERNATIONAL EXHIBITION, 1862. CLASS 10, No. 2268.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

THOMAS LAMBERT & SON,

Self-Regulating Pan Closet.

Lambert's Ball Valve.

High-Pressure Bib and Stop Valve.

PATENTEES and MANUFACTURERS, SHORT STREET, NEW CUT, LAMBETH.

T. L. & SON find it necessary to state that their manufactures have their NAME legibly marked thereon.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

SALES BY AUCTION.

ST. PANCRAS.—MARBLE SLAB FOR ABSOLUTE SALE

PULLEN, HORNE, & EVERSFIELD will SELL by AUCTION, on the PREMISES, 21, King's-road, St. Pancras (near the Workhouse), on MONDAY, MAY 30th, at TWELVE for ONE, about 2,000 feet of VEIN and SICILIAN MARBLE SLAB, of various thicknesses, which will be sold in lots, for cash.—May be viewed on Saturday previous, and Catalogues had at the Place of Sale, and of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, S.W. and 80, Fore-street, E.C.

HART-STREET, CRIPPLEGATE.—To Velvet and Trimming Manufacturers, Upholsterers, Paint Dealers, and Others

PULLEN, HORNE, & EVERSFIELD are instructed to SELL by AUCTION, on the PREMISES, 7, Hart-street, Cripplegate, TUESDAY, MAY 31, at TWELVE for ONE o'clock, the PLANT, STOCK and FITTINGS of a VELVET and TRIMMING MANUFACTORY, consisting of 8 quilting and embossing machines, of various size, with gun-metal rollers; 2 velvet cutting machines, blocking machine, 3 lock stitch sewing machines, by Simpson, of Glasgow; about 4 free wood roll-rs, with the various patterns, a quantity of gun-metal dittos; several hundred yards of silk and cotton velvet, mahogany top counters, library table, mahogany desk, letter-copying press, a Milner's fireproof safe, nests of drawers, office fittings, and other effects.—May be viewed the day previous. Catalogues had of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament street, S.W.

IMPORTANT CITY FREEHOLD, comprising the Spread Eagle Hotel, Gracechurch-street, with extensive Premises and Yard, containing an area of nearly 6,000 square feet, adapted advantageously for rebuilding.

CHINNOCK, GALSWORTHY, & CHINNOCK are instructed to SELL by AUCTION, at the MART, next the Bank of England, on WEDNESDAY, JUNE 22, at TWELVE (unless previously disposed of by private contract), a valuable FREEHOLD PROPERTY, situate in the very heart of the City where all the chief commercial interests of London are now being centred, comprising the principal portion of that well known establishment the Spread Eagle, Gracechurch street, with extensive premises and yard, having a back entrance to Leadenhall Market; the whole covering an area of nearly 6,000 square feet, and forming one of the most important building sites to be found in the City, its advantageous position rendering it admirably adapted for rebuilding as offices, whereby a very large rental may be created, thus offering a desirable opportunity for the employment of capital.—Particulars may be obtained of G. LUCAS, Esq. Solicitor, 20, Fenchurch-street; of Messrs. WALES & SPARKS, Surveyors, 8, Great St. Helen's, E.C.; at the Mart; and of Messrs. CHINNOCK, GALSWORTHY, & CHINNOCK, Land Agents and Surveyors, 11, Waterloo-place, Pall-mall.

GARRICK VILLA, HAMPTON, formerly the residence of the celebrated David Garrick, with its beautiful pleasure-grounds and extensive lawn, fronting the river Thames, kitchen garden and paddocks, containing together between 11 and 12 acres, of which immediate possession may be had; also an Eyot in the river Thames, with a short distance, containing about 1½ acres, let on lease at £7 per annum.

MESSRS. RUSHWORTH, JARVIS, & ABBOTT are instructed by the Executors of the late owner Silvanus Phillips, Esq. to SELL by AUCTION, at the MART, on FRIDAY, JUNE 17th, the above very interesting and valuable PROPERTY, which is situate on a beautiful side part of the Thames, known as the Hampton Reach, is great preserve for fish, of se to the pictures que village and church of Hampton, and the ferry to Moulsey. Hurst and Hampton Course, partly bounded by Bushy Park, and is within a mile of the Palace and gardens of Hampton Court, and the railway station, and only a few hundred yards distant from the Thames Valley branch to Hampton, rendering this property most accessible both from the City and west end of the metropolis in three-quarters of an hour. The residence is therefore suitable to any gentleman alone as a family retirement or even as a constant residence in town, and it affords every accommodation for a family, with capital stabling and other offices. The property is intersected by the road (and footpath) leading from Hampton Court to Sunbury, occupying a frontage thereto, on either side of 540 feet and 110 feet respectively, besides frontages in the village, and a frontage of 600 feet to the river Thames, which, combined with its beautiful situation, gravelly soil, proximity to the church, and easy communication with the metropolis, render it worthy the attention of capitalists and builders. In a separate lot will be sold the eyot in the river Thames, also referred to. Cards to view may be obtained of Messrs. HOLLAND & SONS, Upholsterers, 23, Mount-street, Grosvenor-square, W., and at the Offices of Messrs. RUSHWORTH, JARVIS, & ABBOTT, Land Surveyors and Auctioneers, Sackville-st. W. and 13, Change-alley, E.C.; and without which no person will be admitted. Printed Particulars may likewise be had as above, and of Messrs. COTTERILL & SONS, Solicitors, Bridgewater-house, Queen-street, E.C.

FREEHOLD LAND, BATTERSEA, SURREY, close to the New Park, and giving Votes for the County.

GEO. TODD will SELL by AUCTION, on TUESDAY, 7th JUNE, 1864, at the AUCTION MART, opposite the Bank, in Four LOTS, a FREEHOLD BUILDING LAND, situate in the Battersea road and Park road, close to the New Park; FREEHOLD HOUSES in the main road, which might be converted into shops, and a FREEHOLD GROUND-RENT of 42l. per annum. Plans and particulars may be had of Messrs. H. & F. CHESTER, Solicitors, 1, Church-row, Newington Butts, and at the Auctioneer's Office, Battersea Bridge-road, Battersea Park, S.W.

GREENWICH.—Three acres of valuable FREEHOLD BUILDING LAND, with 30 feet of Water Frontage.

MESSRS. GLASIER & SONS will SELL by AUCTION, on WEDNESDAY, JUNE 1st, at GARRAWAY'S, in one lot, three acres of valuable FREEHOLD BUILDING LAND, having a frontage of about 450 feet, on Deptford Creek, slightly situate, with good approaches, from Rotherhithe and Road-streets and the Roman road.—Particulars, with plan, may be had of SAMUEL ARCHBUTT, Esq. 34, Ovington-square; of W. W. POCOCK, Esq. Architect, 35, Craven-street, Strand; at GARRAWAY'S, and of the Auctioneers, 41, Charing Cross, S.W.

CROYDON, SURREY.—First class Freehold Building Land, in a charming and picturesque locality, being part of the Ruling Park Estate.

MESSRS. BLAKE will SELL by AUCTION, at GARRAWAY'S COFFEE-HOUSE, Change-alley, Cornhill, on TUESDAY, JUNE 21 at TWELVE, in 24 lots, 5 highly valuable FREEHOLD BUILDING SITES, of about half an acre each, approved plots, having frontages of 50 feet wide, with lodge entrance, fronting one excellent position, commanding beautiful views, and having a substratum of gravel. The land is admirably adapted for the erection of superior residences, and is under ground against the possibility of the character of the neighbourhood being deteriorated, the purchasers will be restricted from building any other than private houses, to be set back 30 feet from the carriage-drives leading in the road. The Estate is 1½ mile from Croydon Railway Station, and in the course of construction, will be within a few minutes' walk of the Park, and will command fine views of Surrey, Kent, and Sussex within easy distances of it.—Particulars, with plans, may be had fourteen days before the Sale at Garraway's Coffee-house, Change-alley; of Messrs. CURREY & HOLLAND, Solicitors, 9, Old Burlington-street, London; and of Messrs. BLAKE, Croydon.

HORNSEY, near to the Wood-green Railway Station and the Alexandra Park.—The Valuable Freehold Building Estate, called Duck-Ground (tithe free), presenting a good opportunity for investment of capital in the way of freehold ground rents.

MR. BRAY is favoured with instructions to SELL by AUCTION, at the MART, on TUESDAY, the 31st day of MAY, at TWELVE, in three lots, a valuable ESTATE, being part of the Lordship Lodge Estate, and delightfully situate on the Wood-green Railway Station, having 1,127 feet of building frontages to Acacia-road and White Hart lane, and presenting sites for the erection of detached and semi-detached villas, which are now much in demand on account of the proximity to the Alexandra Park. The roads and sewers have been made at a considerable expense.—Particulars and Conditions of Sale may be obtained of Messrs. ROY & CARTWRIGHT, Solicitors, 4, Lothbury, E.C.; of Messrs. FORD & LLOYD, Solicitors, 4, Bloomsbury-square, W.C.; of JOSEPH IVIMEY, Esq. Solicitor, 8, Staple's-inn, W.C.; at the Principal Inns in the neighbourhood; at the Mart; and at the Offices of the Auctioneer, No. 164, King's-road, Bedford-row, W.C.

TO IRON BEDSTEAD MAKERS AND OTHERS

MESSRS. FULLER & HORSEY are instructed by the Trustees to SELL by AUCTION, on MONDAY, the 30th day of MAY, 1864, at TWELVE o'clock, on the PREMISES, No. 55, Turnmill-street, Clerkenwell, the Tools and Stock-in-Trade of an Iron bedstead Maker, including 30 tons bar, angle, rod, and hoop iron; 8 tons new wrought-iron bedstead-work, fly press, 2 fly wheels, stocks and dies, a portable forge, bellows and tools; a circular wrought-iron cupola, a cylinder-blower, patent power tools; a circular wrought-iron cupola, a cylinder-blower, patent power tools; a circular wrought-iron cupola, a cylinder-blower, patent power

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

72—74, Bishopsgate-street Within, November, 1863.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS. The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Article, trusting that by so doing their useful Inventions may be introduced more generally in all new buildings.—For prices, apply at the Manager, Mr TYLER, 12 Abingdon street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

COMPETITIONS.

TO ARCHITECTS.—The Local Board of Health for the Hartlepool District are desirous of obtaining Plans, Elevations, Specifications, and Estimates for a COVERED MARKET, POLICE STATION, and OFFICES, to be erected upon a plot of ground in Middleton-street, Hartlepool. A premium of £25 will be paid by the Local Board for the plan and estimate selected by them, and a further sum of £5 will be paid to the successful competitor, on condition that he furnishes a detailed specification for the proposed works, such plan, estimate, and specification to become the property of the Local Board. The whole expense of the erection not to exceed £5,000. The Board do not bind themselves to employ the architect whose plan may obtain the premium. A plan of the ground and printed particulars can be obtained on application to the Borough Surveyor. All drawings to be on a scale of not less than 8 feet to the inch, and to be sent under cover, with sealed packet (carriage free) addressed to the Borough Surveyor, King-street, Hartlepool, and endorsed "Market Plan," on or before the 18th day of JUNE next.—By order,

F. G. MORRIS, Borough Surveyor.

May 13, 1864.

TO ARCHITECTS.—The Trustees of the Deal Wesleyan Chapel are prepared to receive PLANS and ESTIMATES for the ERECTION of a NEW CHAPEL in Queen-street, Deal.—For plans of site and printed conditions, apply by letter to the Secretary, No. 1, Albert-terrace, Deal

HENRY PAGE, Secretary.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to WELL SINKERS and OTHERS.—TENDERS are required for CARRYING DOWN a 5 inch bore PIPE to a depth of 240 feet, if necessary, beyond the bottom of the present 6-inch bore Pipe, in the Well, at the Laundry, at Netley, Hants.

The specified can may be seen, and forms of Tender obtained, on application at this Office.

The Secretary of State does not bind himself to accept the lowest or any Tender. (Signed) P. RAVENHILL, Major

Commanding Royal Engineer, Netley.

Royal Engineers' Office Netley, 23rd May 1864

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.

Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Penarth, near Cardiff, in the county of Glamorgan, may inspect the Drawings and Specifications at her Majesty's Custom house at Cardiff or at this Office, between the hours of TEN and FOUR, from THURSDAY, the 19th of MAY, to SATURDAY, the 4th JUNE (on next evening, and both inclusive Sundays excepted).

Tenders to be sent to this Office not later than TWELVE o'clock at noon, of MONDAY, the 6th JUNE, sealed and directed to the Commodore Controller-General of Coast Guard, and endorsed "Tender for Penarth."

The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.

Dated this 10th day of May, 1864, at the Admiralty, Coast-Guard office, 12, Spring gardens, London, S.W.

WAR DEPARTMENT CONTRACTS.—NOTICE to BUILDERS.—TENDERS are required for ERECTING a WOODEN GYMNASIUM 100 feet by 40 feet, and enclosing a 60 yard, at Weedon-barracks. Parties desiring to Tender for the execution of these Works must leave their names at this Office on or before the 18th day of JUNE, 1864, and pay the sum of 10s. 6d. for the Bills of Quantities.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Portsmouth, 1st June, 1864

TO CONTRACTORS.—The Tottenham Local Board of Health are prepared to receive TENDERS for the GETTING OUT, SHOOTING UP, and FILLING IN certain PIPE TRENCHES, forming Contract No 1, for the Wood Green Drainage, plans, sections, and specification may be seen at the Offices of the Board, on and after MONDAY next, the 6th of JUNE. The Tenders shall be sealed, and addressed, "Tenders No. 1 Contract, Wood Green Drainage," and delivered at the office of the Local Board of Health, Tottenham High Cross, N. on or before FRIDAY, the 17th day of JUNE, at TWELVE o'clock. The Board do not bind themselves to accept the lowest or any Tender. Copy of specification and form of Tender, 10s. each.—By order.

CONTRACTS.

TO BUILDERS.—The Committee of the Hull Church Institute are desirous to receive TENDERS for the ERECTION of their New INSTITUTE, in Wright-street. Drawings and specifications may be seen at my Offices. Sealed and endorsed Tenders to be delivered to me on THURSDAY, the 9th JUNE next. The Committee do not pledge themselves to accept the lowest or any Tender. WILLIAM KERBY, Architect and Surveyor.

14, Parliament street, Hull, May 24, 1864.

TO MASONS and PAVIORS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the SUPPLYING and LAYING complete about 900 feet run of 12 inch by 8 inch IRRESER ABERDEEN FLAT KERB and of about 13,200 feet superficial of 3-inch TOOLED YORK PAVING, in the parish of Battersea. The specimens can be seen at the Offices of the Board, as below, between the hours of NINE and FIVE. Tenders are to be sent in, under seal, addressed to the Board, and endorsed "Tender for Paving Batterses," on or before the 14th of JUNE next. Security will be required for the due execution of the contract. The Board do not pledge themselves to accept any Tender. By order of the Board of Works for the Wandsworth District,

ARTHUR ALEX CORSELLIS, Clerk to the Board.

Battersea-rise, Wandsworth, S.W. May 20, 1864.

TO BUILDERS.—TENDERS WANTED, for the ERECTION of a SEA-WALL, on the estate of Henley Smith, esq. The Priory, St. Helen's, Isle of Wight. Plans and specification may be seen after MONDAY, 9th MAY, with Mr INGRAM, National School House, Nettlestone, Isle of Wight; and Tenders to be forwarded to Messrs. J. & J. GIRDWOOD, 49, Pall Mall, London, S.W. on or before FRIDAY, JUNE 10th, 1864.

TO PAVIORS and OTHERS.—The Commissioners of Sewers of the City of London will meet in the Guildhall, of the said City, on TUESDAY, the 7th day of JUNE next, at half-past TWELVE o'clock precisely, to receive TENDERS for RELAYING the GRANITE CARRIAGEWAY PAVEMENT of Bishopsgate-street Within, and Grace church-street, agreeably to specifications, which may be seen at this Office. Persons tendering are required to give the names and full addresses of at least two substantial householders as their Sureties, to enter into bond with the Contractor for the due performance of the contract. The Commissioners do not pledge themselves to accept the lowest Tender, or any, unless deemed satisfactory; and no Tender will be received after TWELVE o'clock on the day of treaty. JOSEPH DAW, Principal Clerk.

Sewers Office, Guildhall, 28th May, 1864.

TO CONTRACTORS.—PORTHCAWL HARBOUR, GLAMORGANSHIRE.—The Directors of the Llynvi Valley and Ogmore Valley Railway Companies are prepared to receive TENDERS for the CONSTRUCTION of a DOCK and other Works, for the improvement of the Harbour of Porthcawl. Plans and specifications may be seen at the Office of the Engineer, R. P. BRERETON, Esq. 18, Lime-street, Westminster, on and after MONDAY, the 30th MAY, 1864; and the Tenders are to be delivered at the same Office, addressed to the Directors of the Llynvi Valley and Ogmore Valley Railway Companies, before TWELVE o'clock on MONDAY, the 13th JUNE, 1864. The Directors will not be bound to accept the lowest or any Tender.

London, May, 1864

TO CONTRACTORS and BUILDERS.—The Trustees of Watts's Charity, of Rochester, are desirous of receiving TENDERS for the CONSTRUCTION of certain ROADS and other Works, on land near the new Infant School, in Gundulph-place, in the parish of Chatham, Kent. Plans, sections, and specifications of the proposed works will be deposited at the new Almshouses, Maidstone-road, Rochester, and will be open to inspection on and after THURSDAY, the 12th instant, and up to the day of Tender, between the hours of TEN and FOUR o'clock. Information respecting the Land and Specifications can be obtained of Mr. A. ROBINS, Surveyor, St. Margaret's Banks, Rochester. Tenders are to be sent in to the Office of Messrs. LEWIS & MARSH, High-street, Rochester, on or before SATURDAY, the 11th day of JUNE next (after which day no Tender will be received), sealed up and addressed "To the Trustees of Watts's Charity, at Rochester," and marked "Tender for Roads." The Trustees will not be themselves bound to accept the lowest or any other Tender; and the contractor will have to enter into sufficient contract (or bond with or without sureties) as the Trustees shall require, for the due execution of the works, and copies of the same will be prepared by the Trustees' solicitor, at the expense of the Contractor.

By order of the Trustees,

J. LEWIS, Clerk.

Rochester, May 9, 1864.

CORPORATION of MANCHESTER.—To EXCAVATORS and CONTRACTORS.—The Waterworks Committee is prepared to receive TENDERS for EXCAVATING a PIPE TRENCH for the New 30 inch MAIN from the Compensation Reservoir at Godley, to the intended Reservoir on Prestwich Hills. The work will be divided into three Contracts, of a length of about five miles each; and parties are at liberty to Tender for one or all of such Contracts. Plans may be seen, and copies of the specification obtained, on application at the City Surveyor's Office, in the Town-hall, Manchester, on and after MONDAY next, the 30th inst. Trial holes are to be made in the line of trench, and may be inspected on WEDNESDAY and THURSDAY, the 8th and 9th of JUNE next, for which purpose the Engineer will attend at the Waterworks Office, Gorton. Tenders for "Pipe Trench," must be delivered at the Townhall, Manchester, before TEN o'clock in the forenoon of WEDNESDAY, the 15th JUNE next. The Corporation do not bind themselves to accept the lowest or any Tender.—By order,

JOSEPH HELON, Town Clerk.

Town-hall, Manchester, 26th May, 1864.

TO BUILDERS.—TENDERS are required for the ERECTION of THREE HOUSES, at Stockwell, by Messrs. Green & Harris, who do not bind themselves to accept the lowest Tender. The Plans and specifications to be seen at Messrs. ARCHER & CHAMBERS'S, 27, Queen-street, City, to whom Tenders are to be sent, on or before TWELVE o'clock on MONDAY, the 13th instant.

[For remainder of Contracts see next Page.

CONTRACTS.

TO BUILDERS, &c.—Notice is hereby given, that Plans and Specifications for REBUILDING CHANCEL and Vestry walls to the PARISH CHURCH of St. Stephen, at Compton Basset, near Calne, in the county of Wilts, will be open at the Schools, near Compton Basset, from the 6th of JUNE next to the 13th inclusive; and all persons desiring to CONTRACT for the execution of the work must send in sealed TENDERS directed to the Rev. JOHN WM. CLARKE, the Rector, Compton Bassett, on or before the 23rd instant. Not the lowest, nor any, Tender will necessarily be accepted. The Contractor, if required, must be prepared with two good approved sureties to enter into the usual legal half-penalties for the due performance of his contract.

TO BUILDERS. — Builders desirous of TENDERING for certain WORKS required to be done at Portchester Castle, Hants, may see the plans and specification at Major JERVIS COOKE'S, Portchester, on and after the 25th day of JUNE next. Tenders to be delivered at the Office of the Architect, Mr. JOHN COLSON, St. Swithin-street, Winchester, by the 18th day of JUNE next. No pledge is given to accept the lowest or any Tender.

June 4th, 1864.

NORTH-EASTERN RAILWAY.—DARLINGTON SECTION.—WAGGON BUILDERS.—The Committee are prepared to take in TENDERS for 300 MINERAL TRUCKS, according to plans, specifications and pattern waggon, which may be seen on application to Mr. BOUCH, at the Company's Works, North road. The Tenders to be delivered at the Secretary's Office by TUESDAY, the 21st day of JUNE, 1864. The Committee will not pledge itself to the acceptance of any of the Tenders.

By order, THOS. MACNAY, Secretary.

Railway Office, Darlington, May 24, 1864.

BUILDERS wishing to TENDER for the RESTORATION of the NAVE and AISLE of St. John the Baptist's CHURCH, Westbourne, Sussex, in accordance with the plans prepared by B. FERREY, Esq. Architect, may see the plans, specifications, &c. at Westbourne Church, on and after MONDAY, JUNE 6th. Sealed Tenders to be delivered at Westbourne Rectory on SATURDAY, JUNE 18th. The Rector and Churchwardens do not pledge themselves to accept the lowest or any Tender.

Westbourne Rectory, June 1, 1864. JOHN H SPERLING.

GLOUCESTERSHIRE.—To BUILDERS. COUNTY POLICE STATION.—The Magistrates for the County of Gloucester are willing to receive TENDERS for the ERECTION of a POLICE STATION and PETTY SESSIONAL COURT, at Watton-under-Edge. The Works may be viewed (previous to tendering) on the 8th instant, at which time the Drawings and Specification, and obtain form of Tender, and any further information may be had of Mr. ROBERT ROBINSON, the Clerk to the Justices, Wotton-under-Edge, to be sent under cover to the Clerk of the Peace, Gloucester, on or before SATURDAY, the 25th of JUNE inst. The lowest or any Tender will not necessarily be accepted.

Clarence-street, Gloucester, May 31, 1864.

TO SEWER CONTRACTORS.—The Vestry of the Parish of Bermondsey, Surrey, will meet at the Parochial Offices, Rose Hill-street, on MONDAY, the 20th JUNE, inst., at SIX o'clock in the evening precisely, to receive sealed TENDERS, for the CONSTRUCTION of about 2,70 feet in length of BRICK SEWER, 4 feet 6 inches by 3 feet, and of about 1,740 feet in length of BRICK SEWER, 3 feet 6 inches by 2 feet 6 inches, and other works connected therewith, in the Rose Anchor road, St. James's-road, and Drummond-road, Bermondsey. The plans and specification of the proposed works, with the Conditions of Contract, may be inspected and any particulars obtained, on application to Mr. GEORGE PLATING-TON, Surveyor to the Vestry, at the Vestry Offices in Maltby-street, Bermondsey, after the 6th instant, between 9 and 4 o'clock. The person whose Tender may be accepted will be required to enter into a contract and bond, with two sufficient sureties, for the due performance thereof. The Vestry do not bind themselves to accept the lowest or any Tender. GEO. H. DREW, Clerk.

Vestry Office, Maltby-street, S E June 1, 18 4

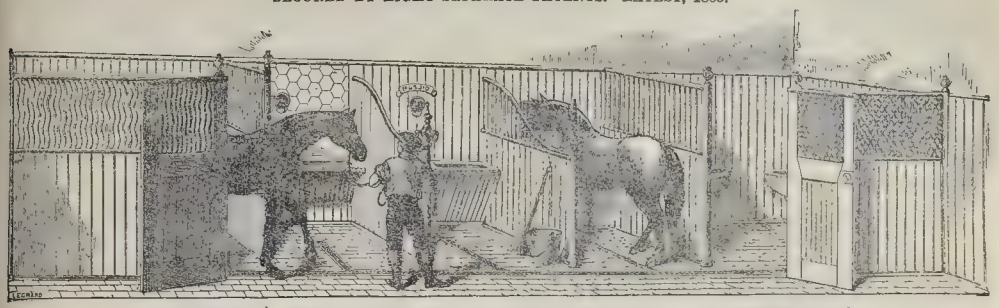
ST. PANCRAS IRON WORK COMPANY,



OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

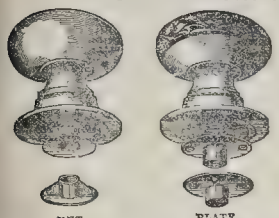
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,



these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c. they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72-74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

NUT PLATE.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)
WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Canal at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Lock and Latch Backs, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

, Illustrations and Particulars sent on application.

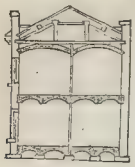
BUNNETT & Co

Original Patentees and Manufacturers. Prize Medalists Great Exhibition



LONDON OFFICE,
17, QUEEN STREET, CITY;
GLASGOW OFFICE,
199, BUCHANAN STREET.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arch is constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted bowl, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens London."

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

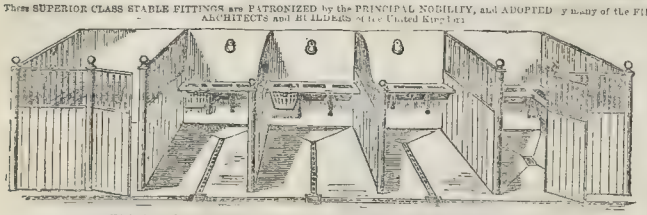
MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now putting up very large establishments under direction of London architects, noted for employing only such as the best of its kind.

Musgrave's Patent Slow-combustion Stove



Is the nearest approach to Warming by Hot Water. It will burn in chamber from Saturday till Sunday evening, without attention during the hours of worship. It hath will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.

These SUPERIOR CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom

PATENT WORCESTERSHIRE RANGE,

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entire new invention, and consists of large MEAT ROASTER, FAN OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole Heats by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most novel inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of side by side; and the ROASTER is constantly replenished with fresh air."

WROUGHT IRON WINE BINS.

FARROW & JACKSON

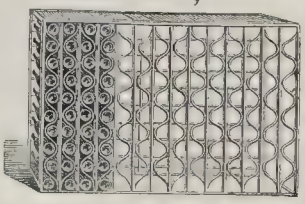
Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR



NEW REGISTERED IRON BINS,

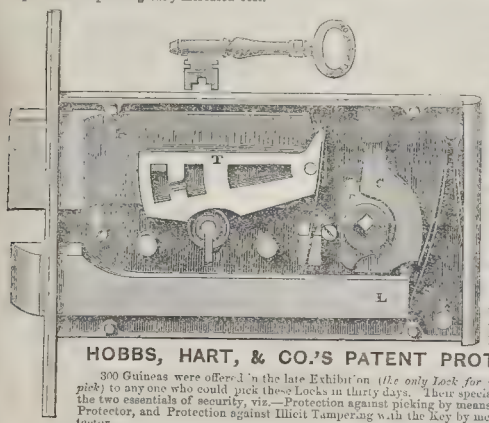
Made any size or shape, to fit any spare corner, with

SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.

FARROW & JACKSON,



18, 17, and 16, GREAT TOWER STREET; and 1, HARP LANE, LONDON, E.C.

FACTORY, 57 and 58, MANSELL STREET.

HOBBS, HART, & CO.'S

MACHINE-MADE LOCKS AND STREET-DOOR LATCHES.

These Locks are recommended for all purposes requiring good security combined with economy of price and durability of wear, as by means of machinery a faultless accuracy is arrived at, which by hand labour would be impossible except at a greatly increased cost.

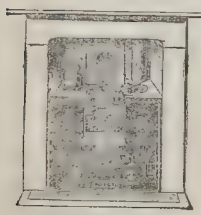
Architects and Engineers are requested to notice that the security of these Locks consists in a series of Levers, that have to be raised to unequal positions by the bits of the key before the bolt can pass. These will bear comparison with those at treble their cost.

These Locks are made with from Two to Five Levers, and can also be made in suits to differ with Master Keys to pass.

The retail prices of Locks for Cabinet purposes are from 2s. to 4s. each; for Room Doors, 4s. to 9s. 6d. each; Street Door Latches, 7s. 6d. to 18s. each.

This Illustration represents the Two-bolt Four-lever Mortise, with Hobbs & Co.'s Patent Follower, price 8s.

HOBBS, HART, & CO.'S PATENT PROTECTOR LOCKS.



300 Guineas were offered in the late Exhibition (*the only Lock for which a Premium was offered to pick*) to any one who could pick these Locks in thirty days. Their speciality consists in their combining the two essentials of security, viz.—Protection against picking by means of their Patent Moveable Lever Protector, and Protection against Illicit Tampering with the Key by means of their Patent Nozzle Protector.

These all-important principles are the special and peculiar features of HOBBS, HART, & CO.'S Patent Locks These Locks vary in price from 10s. to 50s. each, with Solid Keys. For prices, with Changeable Keys, see 16-paged Illustrated List of Locks, Iron Doors, Safes, &c which can be had on application.

HOBBS, HART, & CO. 76, CHEAPSIDE, LONDON, E.C.

BUILDINGS AND SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.

PATENT LIGHTNING CONDUCTORS,

according to the system of Sir Snow Harris, F.R.S, as now universally adopted in every department of the Public Service, supplied and carefully fitted in every detail, under the immediate instructions of Sir Snow Harris, by G. W. GRAY, who has effectually secured a large number of ships, public buildings, and magazines against the destructive agency of lightning, including the Houses of Parliament, magazines, afloat and on shore, of the War Department, and many churches and other important structures. Buildings surveyed, and plans and estimates submitted, if called for.

J. W. GRAY & SON, 115, Fenchurch-street, E.C.

PROTECTION from LIGHTNING.

HART & SON

Beg to call the attention of Architects, Builders, and the public to their

IMPROVED LIGHTNING CONDUCTORS (SPRATT'S PATENT),

As presenting the MOST EFFECTIVE MEANS of OBTAINING SECURITY from LIGHTNING. They are economical, easily fixed, and APPLICABLE TO SHIPS and TO ALL BUILDINGS, including Private Houses, Churches, Chimney-Shafts, Dairies, Powder Magazines, &c. &c.

Price lists and estimates on application.

" 17, South Castle-street, Liverpool
" Exchange-buildings, Dublin.
" 7, Frederick-street, Aberdeen.

THE FURNISHING OF BED-ROOMS.

HEAL & SON

have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to judge properly of the stylean effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large additional showrooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.

Japanned Bed-room Furniture in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.

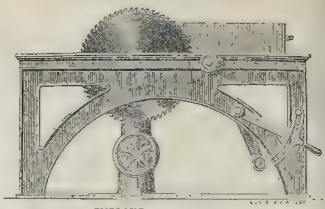
Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.

The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet-work and they have just erected large Work-shops on the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.



They particularly call attention to their Patent Spring Mattress, the Somnier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham-court-road, London.

PRIZE MEDAL, LONDON, 1862.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

ROOFING METAL (WETTENSTEDT'S PATENT or MARINE).
In sheets 2lb. and 3lb. per square foot, 9 feet long by 3 feet wide.

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Southwark, London, and at the Museum of Practical Geology, Jermyn street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE
is 1s. 9d. per cubic foot, delivered in London.

ABERDEEN POLISHED GRANITE WORKS.—Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR
DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,
ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, in above or exclusive of Timber or Iron Framework, in all parts of England.

Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the present extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done on his best accounts to that system.

Good Zinc badly laid will still be a failure, but there is much more importance in the mode of laying than is yet generally known, and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.

This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

THE LAND SECURITIES COMPANY
(Limited).
Capital, £500,000.

DIRECTORS.

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), viz. —
Robert Benson, esq. (Messrs. Robert Benson & Co.)
John Frederick Fuhrmann, esq. (Messrs. Frederick Huth & Co.)
Robert A. Heath, esq. (Messrs. Heath & Co.)
J. S. Morgan, esq. (Messrs. Peabody & Co.)
W. E. Quentell, esq. (Messrs. Fühling & Göschen)
Herman Stern, esq. (Messrs. Stern, Brothers)
} Standing Finance Committee, with three other Directors.

John Bonus, esq. M.P.
Sir James Ferguson, Bart. M.P.
Col. Fulke Southwell Greville, M.P.
Sir John Charles Dalrymple Hay, Bart. M.P.
James Mackie, esq. M.P.
Sir Laurence Peel, Bart. M.P.
Sir Henry Strachey, Bart. M.P.
William Dargan, esq.
Henry Rosenthal, esq.
St. J. Hornby
John Howard Lloyd, esq.
Hon. Wodehouse Napier.
Hon. Henry Petre
Sir Charles R. H. Rich, Bart.
Granville D. Leveson Ryder, esq.
Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, Post End 24, Old Broad-street, E.C.; Office of International Financial Society.

The Company will make advances, repayable with interest at fixed terms, or by instalments, or by terminable annuities, upon the security of—

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interests therein.

2nd. Of rents, dues, assessments, and impositions of a like nature, raised or imposed or to be under the authority of any Act of Parliament, public or private, Royal Charter, Commissioners of Sewers, Drainage, or other corporate or legal authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and interests, whether vested, or settled under the authority of any Act of Parliament, public or private.

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title-deeds, and they undertake the negotiation of special investments.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32 Charing-cross London S.W.

FARRINGDON BRANCH, GREAT WESTERN RAILWAY.

RAILWAY CONTRACTOR'S PLANT,

TO BE SOLD BY PRIVATE CONTRACT.
50 TARPH WAGGONS, Side and End Tip.
50 PAIRS OF WHEELS.
20 BARROWS.
4 CARTS
Apply to WILLIAM LEWIS, Contractor, Carmarthen.

GUTTA PERCHA MILL-BANDS.—The

Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving Bands, Tarpaulings, &c. fully justifies the strong recommendations they have everywhere received. The durability and strength, permanency of pliability at all seasons, freedom from slipping, and especially of injury to, contact with, the grease, acids, alkalies, or water, to all of which they are subject, render the straps used in mills for all purposes, and decidedly the most economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Rollers, Union Joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Tallbottys Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.

THE GUTTA PERCHA COMPANY, PATENTEES,
WHARF ROAD, CITY ROAD, LONDON.

ARCHITECTURAL ENRICHMENTS, in

Plaster, Cement, Papier mache, Composition, &c. Centre Flowers, Trusses and Angles of all descriptions for Cornice, &c. new in design and moderate in price, at G. GROBIS, Modeller and Sculptor's Manufactory, 3, Bedford-buildings, Liverpool-street, Bloomsbury, E.C.

PLASTER ENRICHMENTS,

CENTRE FLOWERS, STOP JOINT TRUSSES,
VASES, ROYAL ARMS, CAPITALS,
And every description of ornamental plaster and external decoration, executed in Plaster, Carton Pierre, Composition, and every kind of Cement, at reduced prices.

MESSRS. HERBERT, MODELLERS,
28, EUSTON ROAD, and PANCRAS.

Bird Gelatine, prepared and ready for immediate use lb
Best Fine White Paste, 2s. per cwt. Casein ditto, 1s. 6d. per cwt.

BALLAST WAGGONS TO BE LET.—

The Midland Waggon Company have a number of low-sided WAGGONS, suited for Ballasting, TO LET. They have also a few for SALE.
Midland Works, Birmingham.

CARTS, LADDERS, BARROWS, &c.—

GEORGE ELL & CO. Builders of Carts, Vans, Waggons, Trucks, and Manufacturers of Implements for Railways, Town use, Agriculture, and Exportation.

LADDERS, BARROWS, TRESTLES, STEPS, PORTABLE SCAFFOLDS, PICK-HELVES, HAMMER HANDLES, &c. and every description of Contractors', Builders', and Decorators' Trade Requisites.

Vans, Waggons, Dobbin and other Carts, specially adapted for exportation. Pug-mills, Jack-rolls, Trolleys, and Portable Railways. Scaffolding, Ladders Barrows, Trestles, Steps, &c. Lent on Hire.
Price Lists on application.

GEORGE ELL & CO.
EUSTON WORKS, 361 and 363, EUSTON ROAD, LONDON, N.W.

PRIZE WAGGONS and CARTS.—

HAYES & SON,
Manufacturers to Her Majesty's Board of Ordnance, and all the principal Railways in the Kingdom,
Coach and Cart Wheelwrights, Spring Van and Waggon Builders, Timber Merchants, Contractors, &c.
Manufacturers of Carts, Vans, Waggons, Trucks, and Implements for all Railways, Town use, Agriculture, and Exportation.
Contractors' and Builders' Dobbin and other Carts, Barrows; Navvy, Excavator, Crowbar, and Oak-bearing ditto, on the shortest notice and of the best materials; &c.

HAYES & SON,
SCOTGATE WORKS STAMFORD.

PENCILS, BLACK LEAD, and

COLOURED CHALKS.

Sole Agents, HEINTZMANN & ROGERS, 9, Friday-street, E.C.
SOLD BY ALL STATIONERS AND ARTISTS' COLOURMEN.

The Builder.

VOL. XXII.—No. 1113.

The Towers of Rome.

THE Mediæval towers of Rome, for the most part mere truncate fragments of more or less extensive fortresses in dusky brick-work, or the masonry of small squared stones, called by Italian writers *Saracenesque*, form, in their grim decay, a characteristic feature in many of the scenes to be admired within the circuit of this city's walls; where town and country, classic ruins, olden churches, solitary villas, gardens and orchards, are blended with such unique effect. Some of these towers are now inclosed by impenetrable convent-walls; others converted into granaries or hay-lofts. One is built up within the premises of a large glass-factory: another serves as an asylum for aged women. The fortifications of the Savelli, on the Aventine, now inclose the peaceful and pleasant gardens of a Dominican convent: the proud castle of the Conti (built by Innocent III.), in part destroyed by earthquake, serves as a granary, with the shop of a greengrocer hollowed out in the thickness of its stupendous walls on one side; this huge ungainly pile being now shut up and impenetrable on its other fronts. The audaciously intruded fortresses of the Frangipani in the midst of and appropriating some of the finest antique monuments within and around the Forum, are now represented only by a substructure of massive stonework near the Arch of Titus, which had been converted into the donjon-keep of their castle on this spot, finally demolished in 1822. A single one of Rome's fortresses, and that not among the more mighty or noted ones, is described as it stood in the twelfth century, with not fewer than sixteen towers on its premises! In 1121, Pope Calixtus II. ordered the destruction of all the castles of the turbulent Cencius (or Cenci); and in 1149 those of the Frangipani and the Senator Pier Leone, even while the latter held the Mausoleum of Hadrian, as still master over Rome, were seized, to be eventually demolished, or defended against the aristocratic by the popular party. In the first years of the thirteenth century all the classic ruins on the Quirinal overlooking Trajan's Forum were fortified by Pandulfo da Suburra, Riccardo Conti (nephew to Innocent III.) and by the sons of the powerful Baron, Pietro Alessio, some of whose structures on this height were of wood, others in enduring material, such as that still erect, one of the most massive and conspicuous brick towers in Rome, now rising above the buildings of a nunnery, popularly called "Torre delle Milizie," and still popularly believed to be the edifice from which Nero contemplated the conflagration, whilst he played on his lute, delighted at that spectacle! In 1258 the energetic senator, Brancaleone, who had been overthrown and imprisoned by the nobles, but afterwards liberated and re-installed by the people, ordered the dismantling or demolition of 140 castles in this city,—an extreme measure directed to checking the turbulent insolence of the baronial families; yet, before the close of the same year Brancaleone was put to death by the still powerful faction, and his head placed in a precious vase at the summit of a column (*vide* Muratori, *Annali*). About the close of the thirteenth century, all those fortresses near Trajan's Forum were purchased, together with the mausoleum of Cecilia Metella, by Boniface VIII., to become strongholds of the Gaetani family. Seeing how comparatively few are the Mediæval towers still extant within this city, we are led to conclude that the work of demolition must have been rapid, wide-spreading, unsparing, even since a date so modern as the middle of the fifteenth century. We read of the existence of no fewer than *forty-four* in a single area of this city's fourteen *Rioni* (regionary quarters), under the pontificate of Martin V. (Muratori, *Antich. Ital.*, diss. xxvi.). Happily all those on the Forum, on the esplanade of the Capitol, on the Bridge of St. Angelo, and elsewhere encumbering the ruins of classic antiquity, have long since vanished. Of those included in the fortifications of the Leonine city remain but four, now of most picturesque aspect in ruins. Many others, especially in Trastevere, have been so cut down from their original altitudes, that they scarce rise above the lines of the other brick buildings in the quaint narrow streets where the greater number are now half concealed.

The Mediæval characteristics in art, of whatever form, have hitherto proved rather a mark for outrage and byword of contempt, than a title to interest or respect, among authorities and umpires of taste in this city. There was, therefore, matter for surprise, even more than pleasure, in the announcement made by the Chev. Visconti, on the 25th of February last, to the Archæologic Academy, assembled at the university, of the decision of Government, conformably with the desire of the Pope, to purchase, with intent of restoring, the singular old edifice, long used as a stable and hayloft, popularly called "House of Rienzo," and once supposed the palace of Pontius Pilate, but in reality of far remoter origin than assumed in the *former* theory, being undoubtedly a work of the eleventh century, raised by Nicholas, son of the Crescentius and Theodora who exercised absolute dominion over Rome in the tenth century, and given by that Nicholas to his son David. Some writers, indeed, assume that the *latter* was the celebrated Crescentius who domineered from the Castle of St. Angelo with his masculine lady; and others state that the first of the Crescentii known to history (by name afterwards modernized into Cenci) was Johannes, who held the prefectship of this city from 1002 to 1012. The extant edifice, close to the Tiber and to the suspension-bridge here crossing it, is but the remnant of a castle, demolished in all but one square tower above an ample basement story, by Arlotto degli Stefaneschi, in 1313, in order to check the influence of the Orsini, its then owners. In glowing isolation, and strangely contrasting with the Classic antiquities immediately opposite, known as the Temples of Vesta and Fortuna Virilis, this most bizarre structure seems a very abstract of the "dark ages," at their lowest decline as to science, good sense, and taste: it impresses us rather as a work of sorcery than of true art; and the utter bewilderment of ideas respecting the dignified and beautiful, peculiar to that fiercely turbulent period, could not be more strikingly represented in brick and stone. We see here, indeed, a silently eloquent monument of that deplorable degradation in the church and state of Rome, amidst whose baleful atmosphere could flourish such evil weeds as the infamous Marozia and Theodora, or the profligate boy-pope, John XII. of the same race. A description of such architecture could scarcely give, to those who have not seen it, anything but a vague notion of the whimsical reality. Its basement-story is in good regular brickwork, like that of the better ancient Roman period, with very little cement; the whole upper part, two stories, in a sort of rubble-work with unhewn stones and brick mixed in barbaric disorder. Along the best-preserved front of the basement story are brick pilasters, alternately flat and rounded, with terra-cotta capitals adorned by rude mouldings: above the rounded pilasters are marble mausolea with reliefs of winged children whose bodies terminate in foliage; two such figures, at the central mausolea, being male and female, in act of embracing,—probably Cupid and Psyche. Between these projections runs a marble frieze, chiselled with foliage. At the upper story this front is crossed by another frieze of marble fragments arbitrarily pieced together, chiselled with various ornamental figures, griffins, children, candelabra, and different animals amidst a maze of foliage, the latter of much smaller scale than the former designs. Above this runs a brick cornice, quite plain, and a series of marble brackets with folial designs chiselled on each (not, however, similar), supporting a projection like a balcony, along whose basement runs another marble frieze with gracefully-designed ornaments, alternating in rosettes and diamond-shaped compartments. Behind the ruinous curtain-wall of the projecting balcony are three arched recesses, probably windows now built up; and above them is carried a string course of dental moulding in terra-cotta. Higher rises the last story, a pile of rude brickwork without any noticeable detail. On the narrower side, towards the river, is an ample arched entrance, now walled up; and near this, the only ingress still open, with a common stable door, at one side of which a block of ruined brickwork advances slightly forward, evidently the remnant of a limb lopped off from this broken body. On the corresponding narrow side, within an obscure lane, is another wide arched portal, also built up, surmounted by a broad lintel of marble, on which is a long inscription in rhymed Latin verse; above this, another archway in terra-cotta; and below, within the archivolt of the portal, may be caught a glimpse of marble mouldings, for the most part hidden by the brick wall that closes up this ingress. At a short distance, is another archway,—once, no doubt, a window, but now alike closed,—the sill adorned by a fragment of marble with a rosette in the centre, and a band of egg-moulding along the lower part. On this side, also, are marble mausolea, with winged figures of children, and another group of Cupid and Psyche embracing (the best preserved), one of these children holding in his arms an animal, either dog or lamb; and on the highest story, at the same (the building's eastern) side, opens the only window still serving as such, without glass or shutters.

The long rhymed inscription begins with lines that singularly evince the ascendency of the religious sentiment even at the darkest period of Mediæval barbarism.

At the head of the inscription are nineteen initial letters, of no intelligible meaning, but which one antiquary, Padre Gabrini, has ingeniously interpreted into a string of names and high titles referring to Cola di Rienzo; while others ascribe the epigraph on the archway over the window near the closed portal, to Petrarch, led by the same idea of the celebrated tribune of the fourteenth century, in association with this building,—*adsu Romanis grandis honor populis*. The interior, or the ground-floor story, is only remarkable for the compact and regular brick-work of its walls, and the groined vaulting over a long quadrangular chamber occupying the entire area; that vaulting partly covered by stucco; and, on one side, those walls opening into two arched niches of different height. A ruinous staircase reaches to the upper story, hitherto used as a hay-loft, and so filled up that our attempts to inspect this part of the gloomy penetralia have been unsuccessful. What is the style of *restoration* projected for this building, Visconti did not indicate to the archæologic

reunion; but local precedents do not allow us to entertain much hope respecting either its animating conception, or style in execution.

THE ARCHITECTURE OF PARIS UNDER NAPOLEON III.*

We have already devoted three articles to the subject of the domestic architecture of Paris, in connexion with a notice of Mons. César Daly's admirable work; and we have not given all particulars that we had collected during long and careful examination of the buildings themselves, and that are essential to knowledge of the general character of the art, and of what are peculiarities of the details. Adequate description indeed would be the office not of the language of words, but of that of drawings; and not of one elaborate publication of some 250 plates, but of many such collections, as much superior to previous works as we have said is this publication by Mons. Daly. Numerous works indeed have appeared, illustrative of the architecture of Paris; but, whilst none of them do the same justice as Mons. Daly's work to their subjects, several of them, by their mere elevations engraved in outline, teach nothing; or, rather, they convey erroneous impressions. Mons. Daly gives few perspective views; but the want of these is less felt than might have been expected.—so thoroughly detailed are the selected examples, and so clear and beautiful are the drawing and engraving.

Although there are symptoms of a time when the practice or pursuit of style will have been exchanged for the pursuit of art, and when writers will have greater difficulty than now, in fitting the character of a building with a name, and in making words serve for description of architectural treatment and details, the question still will not fail to be asked,—What is the *style* of the architecture of new Paris? Now, with the difficulty that there is in answering the question, resides the particular attribute, which we believe to be *art*, of the works of the French architects. For, in proportion to the aptness of application to the new thing, of a term previously recognized for an old form, must be the resemblance of the forms, and consequently the deficiency of invention. It is true that, as we have repeatedly had occasion to say, novelty alone is not *art*. Mere novelty may be realised at any time: whilst novelty, utility with structural sufficiency, and ever gratifying attributes of beauty, *combined*, must form the work of art; and this combination may not be fairly realized once in a generation. The pursuit, then, of novelty, may be regarded, almost as a snare. A slight infusion of it even, is to be counselled, rather than a great one, subversive of old models and their teaching, and endangering accumulated and invaluable results and precepts. Real progress is ever a gradual building up of discovery: the labour of many contributing minds and hands is the essential to it. By no one has this fact, and the danger of impatience in the pursuit of progress, been better recognised, than by one of the best friends to progress, Lord Brougham, as in several of his addresses before the National Association for the Promotion of Social Science. What is true of progress in general, is true in the special case of art-progress. In a subject so vast as that of architecture, some deference must be paid to precedent; or steps will be repeatedly lost; and the same discoveries and conclusions will have to be made and arrived at, over and over again: only, similar conscientious regard should be had in making precedents, to that which prevails in the profession of the law. This is very far from saying that novelty or invention is not an essential quality of art.

English architects have erred in many ways; and so indeed have the French. We have works of which, the common newspaper description,—that the style "is that of" a certain century, or "is that which prevailed" at a specified date,—gives the picture, and does not leave an inducement to visit the structure itself: we have works, and of designs a multitude, that are chiefly novel, or *bizarre*, in the details of form or colour: we have other works that are only copied from a source that had not before been resorted to. In none of the productions to be thus described, can it be asserted that *art* proper, which at the same time demands invention, and is not content with that one of its attributes, has any place.

It has been lately said of inventors, as for example in mechanics, that the true specimens of the class must be busy inventing,—that the utilization and profitable application of their discoveries are secondary with such men. Something of this ascribed characteristic pertains to the French exercise of invention in architecture and the subsidiary arts. The pursuit of novelty is incessant with the French; and fertility in art of one kind or another, is the first attribute to be noted of their decorative artists of every kind. There are other national predilections contributing to the intensification or repression of the one. There is the prevalence of fashion. A thing invented will become the *mode*, and will be then laid aside, without apparent question of its intrinsic beauty. We may admit, there is a similar prevalence with us; and it may be said, as it has been, that this *fashion*, and the true exercise and appreciation of art, are opponents of one another. But it is difficult without observation of French art, to conceive the extent to which fashion can prevail, and to have an idea of the anomaly of the prevalence where the real art-work is at the same time deserving of admiration. Another predisposition is that towards quantity and elaboration of ornament. This may be remarked in the French art for centuries past; and love of show, and a taste for luxury, are affirmed to have greatly increased under the present Empire.

Besides the disposition towards novelty in decoration, there is the same disposition towards contrivance, the elaboration of it merely, as in planning and in mechanism. Also, there is great predisposition to systematizing, and seemingly a perfect readiness to sweep the system away in favour of a new one, pointed to as theoretically better. All that has become recognised as characteristic of France politically, will be found to extend to its architecture.

In the branches of art belonging to the decoration and furnishing of rooms, besides the regard for novelty, ornamentation, and fashion, there is a wonderful power of reproducing with fidelity many different styles. This reproduction is not much observable in the general street-architecture: it may be found in private *hôtels*, and suburban villas; but none of these works would aim so closely at reproduction, as does the villa of Prince Napoleon; for, that is little different from the true Pompeian house. As regards furniture, however, the chief Parisian manufacturers of it are able to fit up any house with every appliance, from chairs to candlesticks, in Greek, Roman, Late Italian, François Premier, Louis Quatorze, Louis Quinze, Louis Seize, or any one of several other styles. The particular productions may not be all that is desired in our theory of art; but wide and accurate study of examples, and the greatest facility with the pencil, are essential for them.

Whatever be the case of the interiors of houses, the external architecture, as we have said, is not characterized to anything like the same extent by reproduction either of one old style or of many such styles. In the exception afforded by a certain number of the private *hôtels*, as well as of the *villas*, the details of trusses and consoles, and the dormer-windows, show the influence of the many remaining examples of the Louis XIV., Louis XV., and Louis XVI. periods.

Much has been written concerning the Louis XV. decorative art, and of want of judgment shown in this country, in going to any such style for models; but much has been left undescribed of the characteristics of the style itself. Some of these are not to be learned from English books; and they are nowhere to be studied so well as in examples which yet remain, and indeed abound, in Paris. The Louis XV. style has been truly enough spoken of as one of internal decoration and furniture, inasmuch as its distinctive scrolls and curves, adopted for such structural members of furniture as the legs of chairs, could not well be substituted for the right lines of the essential parts of buildings, as coins, openings, and mouldings, and since moreover there was a modified Roman style contemporary with it, as seen in the most important works, the churches and other public buildings. In many of these even, the style of decoration prevailed in the interior of the building. But, in the *hôtels*, the manner of the internal decoration flowed over the exterior, and constituted a distinctive character of ornamentation. Trusses to a window-sill, or the springing of an archivolt, were no longer bounded by right lines, as seen in front elevation; the symmetry of corresponding halves separated by an imagined central line, was departed from, as it had been once before in *flamboyant* tracery. The head of the truss was bent to one side, and a twist was given to the foot; whilst in profile, the upper portion was flattened against the wall, and the foot of the truss was made to project more than the head. Thus, all weight-sustaining character in the feature, was taken away from it; indeed many of these trusses seem as though turned upside down. Still, there is in many of the trusses of this period, great elaboration of carving; and some of them are well deserving of intelligent study. Besides the scroll forms, there are several examples of the forms of animals; and these have considerable beauty. The *porte-cochère* forming the entrance to the *hôtel* in which is the office of the *Moniteur*, on the Quai Voltaire, may be instanced. For the key-stone of the arch, there was in place of a head, or of a *console* proper, very generally a circular space or escutcheon supported by branches and leaves. The heads of the windows were commonly segmental, exactly like those in London houses of the same date, of which, perhaps, the best examples are in George-street, Hanover-square. Balconies over *porte-cochères*, with their railings, were gracefully curved on plan; whilst the two cantilevers or trusses supporting the ends, were set obliquely instead of at right angles with the wall. In Paris, numerous examples of the Louis XV. ornamentation of the character described, may be found in the Rue de Grenelle, the Rue de Varennes, and most of the other streets in the Faubourg St. Germain, and about the Sorbonne, as well as in the Rue St. Honoré, and in the district bounded by the Rue St. Martin and the Rue St. Antoine.

It was to be expected that the present French architects taxed by an extraordinary demand upon them, should look to these examples which there are in profusion, and endeavour to glean from them hints. In using them, as they have for a portion of the architecture of new Paris, they have reproduced some of the defects. Throughout the new buildings, indeed, even where the architecture is not of the Louis XV. sort, a truss well profiled is an exception. Generally however, in new works, where resemblance to the character of the old *hôtels* is apparent, it is comprised in an arrangement *cut, cour et jardin*, and of the gateway between low front buildings next the street, or in Mansard roofs with very prominent dormer-windows, and in the form of window-heads. In external steps, no consideration of extra expense of "circular work," seems to prevail for a moment; and in many of the villas, the result is beauty of effect in the whole building, from the treatment of the basement and entrance. The stables are often placed as two front buildings separated by iron gates; the villa itself being seen in the rear. This arrangement is found in one case even in the Champs-Elysées, where the front buildings are of brick. The plan is in Mons. Daly's work.

In the villas, much greater diversity of character is permitted than generally in the town *hôtels*. The showy French books of designs for structures of the class, and addressed probably to builders,—and which it is to be regretted are almost the only works that get displayed in London,—profess to give designs in every style, including even varieties of the Gothic, and what is called English Gothic amongst the number. Amongst the designs, actually employed, in suburban villas, different sorts of Gothic may be found: but they do not seem to us to adhere more exactly to the details of old French Gothic than to those of English. The features chiefly favoured are a hipped roof of very high pitch, and altogether more prominent than the roof in the English Gothic; turrets, round, or square (set diagonally,) at angles, and covered with conical capping or spirelets; and mullions to windows. But although details would not be considered correct, and are in fact sometimes offensive from their appearing to caricature the style, there is occasionally taste and real art along with them in the building. This is the case in Mons. Manguin's villa at St. Maur, already mentioned by us as in Mons. Daly's work. Mons. Manguin is one of those who have great facility in different styles, whilst preserving unity in each subject. He is also a skilful designer of furniture and decoration. His Renaissance villa in the Champs Elysées, not in Mons. Daly's work, is the most remarkable modern house that we are acquainted with, for the profusion and beauty of its external carving, and the richness internally of its decorations and furniture. In Paris itself, we cannot remember more than two or three *hôtels* of the Gothic character. One of them, however,

* See pp. 199 & 218, *ante*; and p. 353, "The Gutter in Modern French Architecture," with illustration, p. 355.

which may be called a villa, is rather remarkable from its merit, and its position next to the villa of Prince Napoleon. A large *hôtel* or villa, somewhat in the style of the time of Louis XIII., has been lately built near the Russian church. Even Mons. Viollet-le-Duc has not adopted Gothic in his villa at Pierrefonds illustrated by Mons. Daly, but a manner bearing about the same relation to French Gothic as the later Jacobean does to English Gothic; whilst his internal decorations are of the Henry II. character.

Of the general street-architecture of Paris, as of the boulevards, where the many-storied, and often long, ranges of building, classed by Mons. Daly as "*maisons à loyer*," are the ruling structures, it is easier to say what it is not, than what it is. We can note some of the general features, and some of the features of detail; but for the buildings in question, the assertion as to the insufficiency of language is applicable.

First of all then, be it observed that the style is not Gothic. In many of the details of the masonry, as in the introduction of chamfers, and in the ironwork, however, the results of study of the Gothic are observable. Secondly, the style is not Greek; nor is it Italian. Columns of the Parthenon Doric, or of the Ionic of the Erectheion, might be looked for in vain; and the cornice of the Reform Club is of a character completely different from what is now used in Paris. Though the older portion of the École des Beaux Arts, by Mons. Duban, is near to the same style as that introduced here by Sir Charles Barry, the recent addition by Mons. Duban, has a front to the quay completely different. Thirdly, the style is not a continuation of the Roman taste of the Napoleon, and Percier and Fontaine, period; and it is not old French of the reigns of the kings who immediately preceded the republic, excepting in the case of such *hôtels* and *villas* as have been alluded to. It has not been lately, the French Renaissance, as it was so much in the time of Louis Philippe: neither the naturalistic ornament, nor the reproduction of arabesque, can be said to prevail now, as then. In the *hôtels*, the style, from the use of stone in place of our red brick, is not the Franco-Dutch manner as we long had it; two groups of houses in the Champs Elysées, where red brick is used, being the only exceptions that call for notice.

But, comparing many of the buildings of Paris with the Greco-Italian of Klenze, we find points of resemblance with it. However, this character will be found in public buildings, such as the Mairies (illustrated in the *Revue Générale de l'Architecture* and our own volumes), or the railway stations, more markedly than in the domestic architecture. It is seen for instance in the Hôtel des Ventes Mobilières lately illustrated by Mons. Daly in his "*Revue*," and in details which we reproduced when explaining forms of the gutter. We are treating of the general street-architecture, rather than of the architecture of public buildings. Were we giving a complete description of the architecture of Paris, we should have to allude to the new churches, of which there might be a dozen or more calling for notice,—some of them being in Gothic, not always satisfactorily treated, some of them having an Italian character, and others a Romanesque.

The style of the general street-architecture may be said to be variously founded upon the old French,—as Louis XIV. or Louis XVI.,—upon the revived Franco-Italian Renaissance of Louis Philippe's time, and upon the German Greco-Italian.

The *porte-cochère* successfully treated, as we described in a former article; the ground-story deficient in footing of base-moulding, and in emphasis, — or, as Mr. Fergusson has the term, *accentuation*; the *entresol* above it; the low stories, equal to one another in height, and mostly having balconies with iron-work; the top or attic-story set back, and the continuous railing along the main cornice, and perhaps along another cornice above or below; the height of the buildings, and the general equality of heights; the Mansard roof and its dormers and lucarne-windows prominent in the *hôtel*, less prominent (or one with the attic) in the *maison à loyer*; and ornamentation far exceeding what would be allowed in London; all these may be set down as universal.

After them the most prominent feature of the architecture of Paris is the panelling. Some idea of the manner of its introduction will be afforded by one of the subjects in our illustration to which we have already referred. The English architect generally considers that to introduce panels on the piers between windows, is to adopt a system that is more suited to joiner's work than to masonry. The French architect positively cannot leave bare space. His system may be compared with that of the Perpendicular Gothic, wherein the wall or side of a building might be regarded as an arrangement of mouldings forming spaces, open where the way for light was wanted, closed elsewhere. The French casement, however, takes the place of mullions; and elegantly designed as it sometimes is, it is certainly more favourable to architectural effect than are our sashes, which, when glazed with single panes of plate-glass, are in some respects even more objectionable than when they have the ordinary panes.

The panels are often formed with raised mouldings richly ornamented.

String-courses designed in continuation of the window-cornices, nearly always run across the piers.

The architraves and cornices of the windows, and any pilasters that may be introduced in the front, have the slightest possible projection. No respect would be paid to the dictum of Sir William Chambers, that pilasters should project one-fourth of their diameter to allow of mouldings of what he might have considered proper projection being stopped against them: the French system is much nearer to that of Soane than of Chambers.

Another feature, which is well-nigh universal, is that of outside shutter-blinds. These are found even in courts, and where the sun's rays would seem never liable to fall; and they are certainly a convenient means of closing the opening and preserving ventilation, when the heat is not so great as to lead to adoption of the Italian method of attempting to keep it out altogether by closing both shutter and window. These shutters are generally ruthlessly placed to fold over no matter what elaborately ornamented architrave. In the Boulevard de Sebastopol, however, they are folded into reveals which become a considerable addition to the effect from depth. The front walls of Paris houses are always very thick, and of massive stones properly bonded: the party walls are less substantial, and are sometimes a mixture of brick and little more than rubble-stone.

The window has frequently a deep frieze for rosettes, or other ornament, or one into which the console rises. Very narrow architraves often contrast with the importance given to the head of the window. In the system of mouldings continued as string-course, a space corresponding to the window-frieze is generally preserved. Sometimes, however, where there is a projection of the balcony of the window above, as cornice to the lower window, and there are cantilevers, the head of the window will be carried up, cutting the line of frieze as marked on the adjacent piers. These cantilevers, as we have said, are not always elegant: there is generally a length of straight line in place of harmonious junction of curves of contrary flexure. In these cantilevers, as in those of cornices, and in the treatment of pilaster-formed projections, it is very common to see mouldings which are only upon the front, not returned at the two sides, or which are at the sides and not returned across the front. In the latter instance the plain space may be decorated with incised ornament. Incised ornament is very common elsewhere; and often it has much beauty of effect.

The lower arris of the corona is often cut off by a chamfer. Of the marked feature of the cornice, the *chêneau*, or gutter with decorative blocking-course, we have sufficiently spoken.

It will have been already understood that sculpture of a high class contributes to the architecture, as in the window-heads, and the supports to the principal balcony.

We have now concluded our account of so much of the decorative architecture of Paris, as belongs to the domestic buildings. We have not refrained from the endeavour to supply something more than a notice of the plates in Mons. Daly's work, although we cannot hope to have rendered unnecessary the text which is in preparation. The latter part of the work, owing to Mons. Daly's state of health, has been delayed. Every member of the profession in this country, who knows the value of Mons. Daly's services, both to art-advancement in France, and for the appreciation of the people of the two countries by one another, should join in our earnest hope that our friend may be soon restored to the health which he has taxed by his exertions. His present work, no less than the volumes of his "*Revue*," should be possessed by every English architect: to any one who is not narrow-minded or imbedded in the prejudice of style, the architecture of our French contemporaries, even taking it to have defects, should afford a world of suggestions.

ON TERRA COTTA.

A LECTURE was delivered on Monday evening last, at the South Kensington Museum, by the Rev. Dr. Brock, on "Terra Cotta and Luca Della Robbia Ware."

The lecturer said, that about thirty-five years ago, when he resided in Staffordshire, not far from the Potteries, it was his good fortune to make the acquaintance of that excellent man Herbert Minton. He frequently conversed with him upon the subject to which he was so very much attached, and on one occasion suggested to him that it would be a good thing to revive the use of those glazed and coloured tiles that were to be found in some old churches. Mr. Minton replied, that he would think of it, but that, he regretted to say, there did not exist a specimen of these tiles in his neighbourhood; and that it was necessary for the workmen to have the specimens before them to examine and to handle, before they could be successfully imitated. The fact was, that at that time no collection of such specimens existed in this country. Even at Naples, there was then no collection of terra cotta glazed ware. At Rome, the most exquisite specimens of art that the pencil or the chisel could accomplish were to be found; but if the history of terra cotta ware were sought for in its different forms, there was nothing to be found that could illustrate it. In Florence and Rome, beautiful specimens were to be discovered here and there in churches; but there was no collection of specimens which might be made use of in an educational point of view. Of Vienna, of Belgium, even of Dresden, the city of china, the same thing was to be said. In Paris, with its Tuileries, where such a collection might from its title be looked for, there was not a series of hardware which could be resorted to by the student. In the British Museum, thirty-five years ago, the magnificent vases collected by Sir Wm. Hamilton, when he was at Naples, were to be found, together with a few specimens brought from Mexico; but there was no specimen of terra-cotta ware worth speaking of. So things remained until that great and good man —great and good in private and in public life— who was wedded to our beloved sovereign, determined that the deficiency should be supplied; and, at his suggestion, and by his exertions, the gathering with which they were all acquainted, and which they all so much admired, was commenced at Marlborough House. Like a little boy outgrowing his clothes, the collection soon outgrew the place of exhibition, and it was transported to the South Kensington Museum. By degrees one and another department had since increased, until the present unequalled collection was secured. He could say, without fear of contradiction, that neither in France, in Germany, nor in Italy, was there such a collection as was contained under the roof of that museum. True, it was not altogether perfect, but it was approaching completion. There were various links in the chain still required, but they were being supplied. The subject of the ceramic art was too extensive to be treated of on that occasion, and he could only touch upon that branch of it which was confined to terra cotta and Luca Della Robbia ware. Terra cotta, as they all knew, meant nothing more than baked earth, or, in other words, burnt clay. It was the material in which the first attempts at decorative art were made, and specimens of it were to be found all over the world. In Egypt they were discovered of the most ancient character, and around the basin of the Mediterranean and in Italy they were constantly being dug up, of varied form, and of most beautiful character. He hoped that a few of the valuable specimens which were discovered in Southern Spain, would be secured with a view to the completion as far as possible of the South Kensington collection. In Mediæval times terra cotta was treated in Italy in the most marvellous way, and applied in various ways to the decorations of churches, whether in Greek, Renaissance, or Gothic. It made his heart glad to think that Englishmen were at length becoming alive to these things, and that in this country such beautiful works of art in burnt clay were made. In the collec-

tion in that Museum they would find objects of the highest plastic art. To one magnificent group he would direct their attention, namely, to that in which the Blessed Virgin is seen weeping over the dead body of our Lord. It was worthy of their careful study, as was also a sweet group, the Virgin with our Lord in her lap. They would also find a "Crucifixion" amongst the basso-relivos, which was a study for an artist. Near it they would find another beautiful specimen, namely, the Birth of St. John the Baptist. Another specimen which deserved their best attention was not only beautiful, but useful, as teaching them a great deal by which they might profit: it was surrounded by a frame divided into three compartments, covered with coarse canvass, which was primed with plaster of Paris, moulded in the most artistic manner. In the panels were exquisite specimens of work in burnt clay, glazed and fixed in. Near it would be found a basso-relievo, representing a man reading at a desk, and looking with the greatest anxiety at the book before him. Nothing in ancient or modern art could be found to surpass that specimen of terra-cotta work. It would be worthy the study of an artist, and of his travelling from a foreign country to inspect it; and it would serve to show to what beautiful purposes the material was capable of being turned. Above it was a beautiful crucifix, the finish of which demonstrated the facility with which burnt clay could be adapted to such a subject. They would also find a large number of busts, all marvellously well modelled. The Florentine artists, by whom some of them had been modelled, where certainly very truthful, as they did not attempt flattery. The physiognomies of some of the subjects were not the most beautiful specimens of humanity; but there was a life-likeness about them which stamped them as works of genius. The study of terra cotta was of great practical importance now, and was likely to be of increasing importance as the love of art spread among the people. The artist and the architect should never forget the climate they had to deal with; the fog, the damp, the smoke, the gas, against which they had to contend. Many persons whose means were small wished to have their houses adorned. Decorations in marble were out of the question, owing to their costliness, and there should even then be the model in clay; but, in the case of terra cotta, they had the model in the first instance,—and a model capable of the greatest expression and of the highest finish and beauty. Family busts might also be obtained, and brackets on which they might be placed; and the passages and halls of houses might be adorned at comparatively little cost. By using red and white clay diversity of colour could be procured. Cornices of a beautiful pattern could be moulded in burnt clay, and used for interior decoration. The material could also be applied to external decoration. The painting of hall doors was very expensive, and it had to be repeated periodically. Why should not the fashion which prevailed in Munich and Bavaria be adopted here? There the panels were formed of burnt clay, beautifully figured and glazed, so that a shower of rain cleansed them thoroughly; and it was so lasting that in a few years the saving in the cost of painting more than equalled the expense of the panelling in baked earth. We might also adopt terra-cotta decoration in public institutions, such as theatres and concert-rooms, with great advantage and at little comparative outlay, and it would remain and be admired for many generations. Clubs also might be adorned in the same way with the characters that they took an interest in, political, military, artistic, or literary. We would also suggest that the same idea might be carried out in public schools, where the children should have before their eyes, not dull walls, but objects of beauty, by which their tastes would be educated and cultivated. Churches, too, might be inexpensively decorated. The cost, as he had stated, would be small, and the material would be what it professed to be and not pretend to be that which it was not. Public fountains might be beautified in the same way—as might also shop fronts. In this age of advertising, why should not the proprietors of establishments let it be known, when the shop is shut, morning and evening, Sunday and holiday, what wares he dealt in, by decorations in terra-cotta, which would be at once beautiful and useful? At railway stations, and on railway bridges, now so unsightly, a great deal might be done, at a very trifling outlay, to please the eye, by the artist in burnt clay. There was also great scope for the employment of the material in our churchyards, in expressing, in a touching and enduring form, the love of the living and the hope of the dead. So far, he had dealt with the application of terra cotta to the purposes of decorative art. He would now proceed to make a few observations with respect to Della Robbia ware. It was nothing more than the process of burnt clay, carried a little further. On the baked earth was placed a metallic colour fixed in by the action of fire. Luca Della Robbia, by whom the art was not originated, but revived, lived in the fifteenth century, and, at an early period, turned his attention to moulding in clay. The Egyptians were well acquainted with the art which he practised with such success, and the secret of which he only confided to members of his own family. At first he moulded white statuary on a blue ground: not content with that, he added more colouring, particularly in the drapery of his figures; and at a subsequent period he introduced perspective. The wreaths of fruit and flowers which surrounded the panels, in some of the specimens in the Museum, were marvels of art, and deserved the most careful examination. How, he might be asked, was the Della Robbia ware to be applied. He answered, amongst other ways in the decoration of our churches and of our houses. If it were so used, the ornamental work on ceilings, which now refused to be painted, frequently owing to the smoke from gas, could be cleaned by a housemaid from a pair of steps without any trouble. There was nothing worse in London architecture than the chimneys—the tall hollow cylinders which topped our houses. At very little expense colouring could be introduced, and that which was now hideous made sightly. Without being extravagant, or procuring anything gaudy, a person of limited means could have his house made beautiful by means of panels and other decorations in this ware. Such of the audience as had looked, on a clear day, from Highgate towards London would recollect the enormous number of dull unsightly roofs that met their gaze. By adopting the Della Robbia ware, beautiful coloured and glazed tiles could be used, which would have a most picturesque appearance—at once relieving the eye, and being in a high degree ornamental. This was a case in which not England alone, but the entire kingdom, expected every man, and every woman, too, to do their duty: and if they did it, they would, at a small cost, render London a city of loveliness and splendour—a city not merely beautiful in its streets and avenues, but in the material of which they were composed;—a city, too, that would have its teachings—not the lascivious teachings of ancient times, but teachings better and purer in every regard. He heartily commended this subject to the attention of all who took an interest in the great city in which their lot was cast.

EXHIBITION OF WORKS OF DECORATION IN PAINTERS' HALL.

THE commendable effort made by the Worshipful Company of Painters, otherwise Painter Stainers, to improve the manner of execution of painting and decorative work, and to revive the practical utility of their ancient Guild, is continued this year; and their fourth exhibition has just been opened at Painters' Hall, Little Trinity-lane. Including awards to exhibitors at the International Exhibition of 1862, there have been five occasions on which prizes have been conferred, the first exhibition in the Hall having taken place in 1860. In our volume for that year,* with a notice of the exhibition, will be found some particulars of the history of the Company, and of paintings and other works of art in the Hall, along with certain suggestions which we ventured to offer, for the extension of the efforts of the Company in directions where there was much opportunity for serving all persons interested in the trade, and for benefiting workmen and improving work. These suggestions do not appear to have received exactly the attention that we are disposed to think they deserved, or that would have been within the means of the Company. The exhibition at present, "is instituted to stimulate the exertions" of persons in the trade, and includes specimens of four kinds of work, viz.—decoration, graining, marbling, and writing; but except in marbling and graining, this year it affords little evidence of success in the one department of the efforts desired, that relating to execution of work: it includes but little diapering or stencilling, or scarcely anything to show steadiness of hand, as in drawing an even line, and in keeping prescribed breadths and edges, which we originally remarked upon as deficient. Good work of the kind that each workman ought to be able to execute, is even now more needed than skill in graining, or than the sort of artist-work to which arabesque decoration may be said to belong. The history of the Company shows that painters, artists,—though, perhaps, more especially decorators, called "Tinctores,"—were of the fraternity that became incorporated under Queen Elizabeth, at a date hitherto given variously, and now stated as 1581; and it shows that in modern times, the relationship with artists was maintained, Sir Joshua Reynolds and others having belonged to the Company, as had Verrio and Kneller in the seventeenth century; whilst living members of the Company are excusably proud of its antecedence of the Royal Academy. But, the present mission of the Company is only subservient in a secondary and subordinate degree, though in an important and necessary manner, to *art*, and we are inclined to urge upon the members (including fewer representatives of the trade than we should wish to see interesting themselves in the efforts), the desirableness of aiming at the perfection of what might seem a lower class of work, and the improvement of ordinary workmen, as much as at the matters which now absorb attention. We may here observe that there is much fallacy in speaking, as did even a Royal Academician on the day of private view at Painters' Hall, of the work which is imitative, graining, or marbling, as art, because of its closeness of imitation: this sort of view of what constitutes art, would degrade the calling of the painter and the office of painting, and ascribe to mere handicraft a character which it could not claim. Art higher than the common house-painter's work, may be within the scope of the Company's efforts; but, then, it will be such decoration as arabesque, or subject-painting in medallions: graining and marbling belong to work of a lower class. Sir Morton Peto, on the same occasion, was equally unfortunate, as in his attempt to prove that what could be done by Frenchmen was already done in England: his purchase of the same silk in Paris, as he had procured in Regent-street, obviously is consistent with an opposite conclusion to that at which he arrived.

The prizes offered this year, consisted of four silver medals, four bronze medals, four certificates of merit, and the freedom of the company, with the addition of two extra prizes from a donation by the Past Master, Mr. D. G. Laing, viz.—one of five pounds for the best specimen of arabesque decoration, and one of the same amount for the best specimen of decoration of the period of Louis Seize. One of these two prizes has been given to Mr. W. Homann, for a decorative panel (No. 22), and designs. The designs, which are to a small scale, and are for ceilings and sides of rooms, though not all on good principles, well deserved to be rewarded. For the painted work of the panel, paper-stained work could be substituted with advantage, and generally would be found better executed. There should be art-merit in work of hand, peculiar to it; or the more mechanically executed work would deserve to be preferred. There is some good arabesque work in the two "decorative panels" (20), by Mr. S. Burnby, which have received a bronze medal. Those by Mr. F. W. Burford (28), three in number, which have received a certificate of merit, are good, excepting in the pictorial portions. There is excellent work in the wall-and-ceiling decoration (25), by Mr. J. J. Lovegrove, which was considered not within the terms of the competition. A "decorative cabinet" by Mr. J. Rodgers, of Sheffield (15), has received a silver medal. Capital specimens of marbling (3) are exhibited by Mr. W. J. Hoodless, and have received a silver medal; and a bronze medal for inlaid marbling has been given to Mr. W. J. Cloake. A certificate of merit for graining has been given to Mr. G. Croker, and one for marbling to Mr. A. Coggan. The writing, much of it, and even some of that which has been rewarded, seems to us irregular, and generally inferior to what has been exhibited previously.

There are 29 numbers in the list, but several of them relate to as many as nine specimens. The exhibition will remain open to the 30th of this month, between the hours of 10 and 7; and admission is gratis. Mr. F. G. Tomlins, who is

* Vol. xviii., p. 357.

the Clerk to the Company, conducts the arrangements of the exhibition, which were originally in the hands of Mr. P. N. Tomlins.

THE CONDITION OF THE METROPOLITAN DRINKING FOUNTAINS.

IT is unfortunately the case that the street-fountain movement has not, upon the whole, been creditable to the taste or skill in design of the present generation: there are a few exceptions; but, if the chief part of the fountains are not pleasant to the view, their great utility is undeniable; and if the objects are in some cases unsightly, there is no reason why matters should be made worse by allowing them to fall into a state of dirt and decay. In some instances the water-supply seems to be irregular; in some stopped altogether: in certain cases the cups look rusty, and not likely to tempt passengers to use them: unpleasant matters are left to lie about, and from one cause or another several of the fountains are anything but pleasing to the view or ornamental.

The permanent upholding and keeping in order of the drinking-fountains is a matter which should be settled; and it becomes a question whether it would be best for the care of them to be left with the Association which has been instrumental in the erection of so many of them, or for some plan to be devised by which the cost of keeping up the fountains should come out of the rates like the maintenance of the foot-paths, the public urinals, and the street-lighting. The entire cost of the fountains each year in even a large parish would amount to a very trifling sum.

ALEXANDRA PARK.

THE works here are progressing very rapidly, and tend to the belief that it will not be long before the directors will be able to utilise their land and recreate the public. A race-course and cricket-ground are being prepared, and the races already arranged for show the favour which this part of the scheme is likely to meet with. Two wooden pavilions are being erected for the use of the cricketers, under the direction of Mr. Giles. On the the top of the hill, commanding most charming views, Messrs. Kelk & Lucas are using up some of the materials of the International Exhibition building in carrying out a design made by Mr. Johnson, architect, the features of which include a nave 900 feet long and 85 feet wide, a centre transept 430 feet long and the same width as the nave, and two shorter transepts, each 320 feet long, the same width also as the nave; and intersecting at a short distance from each end. The centre will have erected over it one of the great domes, which will be 170 feet in diameter and 220 feet high in the interior, but, unlike the late Exhibition, will be for the most part solid, panelled, and decorated; a subdued light being admitted near the top and by lunette windows at the sides. On each side of the nave and transept will be erected buildings about 50 feet wide and two stories in height: these will have brick external walls, with arcaded openings and windows, and will form galleries next the nave and transept, as in the Exhibition building.

The general character of the architecture of the exterior will be made as much Italian as the nature and dimensions of the old materials will permit, and will consist principally of brickwork in two colours, with stone dressing and ornamentation. The dome, as also the octagon cupolas at the smaller intersections, will be covered with Muntz's brass-coloured metal, with moulded ribs and panelling in bold relief.

The terrace on the north-west side, which will be 1,000 feet long and 160 feet wide, supported by Italian arcades, will cover a railway station, from which access will be had directly to the building at the ends of the three transepts, and to which station all the railways of London will ultimately be brought.

The estate consists of 480 acres of well timbered and beautifully undulating land, adjoining the Wood Green Station on the Great Northern Railway. The Park proper will consist of about 200 acres, and the remainder of the estate will be laid out for building purposes.

At a short distance from the main building, a large structure, chiefly of wood, is being erected capable of holding 10,000 persons, and intended to be used before the other is completed: it is making rapid progress. Of this, also, Mr. Giles is the architect. The cost of it will be about 10,000*l*. We do not ourselves clearly see the wisdom of this expenditure, notwithstanding the statement that the building will hereafter be used as a large gymnasium. The directors, however, doubtless see their way.

A large number of brick-making machines are being set up on the ground, and the greatest activity everywhere prevails.

The gardens around the old residence, which forms part of the estate, are in admirable condition just now. The red chestnuts, and the Oak Avenue, with peeps of Hornsey and adjacent villages, are some of the features. Near this end of the estate is the well which gave the place its name—Mus-well Hill. There was a "cell" here that belonged to the Clerkenwell priory.

A certain portion of the land will be let, as we have said, for building purposes, so that we may expect before long to see here, as around the Crystal Palace at Sydenham, a town of villa residences spring up. There is no fear of interfering with the Crystal Palace: there is plenty of room for both. For anything good Manchester, Leeds, and Birmingham will send visitors, besides the metropolis. Nothing but good and enlightened management is required to make Alexandra Park a success.

DOUBLE ACROSTIC.

THE LETTERS.

1. O'ER the waters gliding
   In the race it flies:
2. At the goal presiding
   He awards the prize.
3. To the trav'ller weary
   Glad and welcome view:
4. Sight as glad as cheery
   To the wave-tost crew.
5. Lo! where youth and beauty
   Mingle hand in hand:
6. Thousands owe him duty—
   Bow to his command.
7. From a toil unblessèd,
   From a fate unkind,
   Oft the poor oppressèd
   Seek it, not to find.

THE WORDS.

When my Firsts have reckon'd
Each due estimate,
Then they send my Second
Forth to learn their fate.
Many are rejected:
Still the lowest win:
Then my First selected,
Sees his work begin.

Builder.
Tenders.

THE LATE MR. JOHN WYKEHAM ARCHER.

IT is with extreme regret that we have to notice the death, at the age of fifty-eight, of this able artist and industrious and well-informed antiquary, whose career deserves attention.

Mr. Archer was born at Newcastle-on-Tyne, in the year 1808, and was the eldest son of a respectable and prosperous tradesman of that town. His father had considerable antiquarian and artistic taste, and delighted in the collection of prints, old china, rare violins, and other curiosities. At a very early age John showed skill in drawing, and copied in a vigorous manner some of the designs of the Bewicks and other artists. Having received a very good general education, it was determined to apprentice him to John Scott, who was a fellow townsman, then practising in London, with repute, as an animal engraver.

At the time of the arrival of the young artist in the great city, the antiquities of which he was destined in after years so extensively to investigate and illustrate, Scott lived in one of the houses on the east side of Coppice-row, Clerkenwell, not far from the workhouse, and one of the duties of the apprentice was to go at certain times of the day to the Clerks' Well, not far off, for drinking-water for his master's use.

In many respects the studio of Mr. Scott proved a good school. Cousens, the engraver of some of the best plates after Turner and other well-known artists, was a fellow-student with Mr. Archer, and the master encouraged the youths to practise drawing and sketching, not only from models but from nature; then there were plenty of picturesque materials close by Coppice-row, where multitudes of houses now stand.

The last part of the engagement of Mr. Archer with Mr. Scott was spent in little comfort, for the mind of the master gave way, and the days were passed in trouble and confusion. Mr. Archer then returned home, taking a passage from the Thames to the Tyne in a collier, a very common means of transit for the few travellers who wandered from the north to the south. The voyage lasted three weeks. Arrived at Newcastle, he found that a small artistic community had sprung up in the town, amongst the members of which may be mentioned the elder Richardson, his son George, and Thomas Myles, Carmichael, Balmer the marine painter, David Dunbar the sculptor, and a few others, who became closely associated together. There was also a literary circle of "clubable men," who much assisted each other in mutual mental improvement. In both these little societies Mr. Archer distinguished himself by the skilful use of both the pen and pencil. About this time the subject of our memoir, in conjunction with Mr. William Collard, a local engraver, produced a series of large views of Fountains Abbey, in Yorkshire, from drawings by Mr. Carmichael. These etchings are remarkable for their bold artistic style, and for the original manner of their execution. During the visit to Yorkshire Mr. Archer engraved several plates for Mackenzie's History of Durham, and spent the time pleasantly enough in sketching along the coast, and rambling to places of interest in the neighbourhood.

In the year 1830-31, Mr. Archer returned to London. At this time, Mr. Heath and the brothers William and Edward Finden had large engraving establishments, where artists of ability were engaged in manufacturing the plates for annuals and other elaborately-illustrated books. In the Messrs. Finden's studio, Mr. Archer readily obtained an engagement, but at a small salary; such however was the success of his first etching from a picture by Calcott, that the amount of income was at once doubled. The Findens were then engaged with the illustrations of the Bible, "The Ports and Harbours of Great Britain," and some other important works; but in 1836, 1837, 1838, a change took place in the system of book illustration, and eventually the once crowded studios of the Messrs. Finden & Heath became deserted, and many engravers were thrown out of employment, especially those who had only been accustomed to engrave parts of pictures. Those who had artistic ability and were able to begin and complete an engraving could, for some time after this period, find plenty of remunerative employment from various publishers, and in this way Mr. Archer continued to follow his professional pursuits, with some little assistance at his own residence; and in 1838 he took his chance in one of the most important lotteries in life, and drew as a prize an affectionate wife, who was well fitted to help and encourage an artist in those passages of his life which cause trouble and despondency. This lady was sister to Mrs. Lance, the wife of the well-known painter.

During the next few years Mr. Archer engraved many plates for the new sporting magazine, from pictures by A. Cooper, R.A., Lance, and others. Some of these are remarkable for the richness and variety of the tints, and for dexterous skill in imitating various textures by means of etching and the graver. Numerous other plates might be mentioned, but eventually the introduction of lithography and engraving on wood, especially the latter, almost entirely superseded the old-fashioned plates as a means of book-illustration. In consequence, several engravers, who continued to follow this now profitless work, fell into poverty and distress. Instead, however, of continuing without advantage a pursuit which he had so long followed, Mr. Archer began to look in other directions for a market for his talent, and turned his attention to painting in water-colours. It happened that, while waiting for pictures to be engraved in the old way, the spare time had been filled up by

visits paid by Mr. Archer and his pupil to places of ancient fame, which then remained within the bounds of the metropolis; and on these occasions a series of sketches were made of St. Saviour's, Southwark, Lambeth Palace, and of many miscellaneous subjects. In time these illustrations numbered upwards of one hundred, which were offered, but without meeting with a purchaser, to the late keeper of the prints in the British Museum. These works were, however, brought under the notice of Mr. W. Twopenny, of the Temple, who became a purchaser, and commissioned Mr. Archer to produce twenty drawings each year of the relics of bygone days which were to be found scattered about in the highways and byways of this bustling city.

Up to the close of the artist's life this work was carried regularly forward, and the result is that Mr. Twopenny has a collection of the greatest value illustrative of the various aspects of London. In these sketches there is a happy combination of cleverly drawn figures with the architectural features: for instance, in a view of Temple Bar of twenty years ago, we find the groups delineated with fidelity, and we see the bulk-head shell-fish shop which must have been familiar to Dr. Johnson and his friends, the placards of the day, and so forth. A glance at this sketch and a comparison with the scene at present shows the changes which have been made there since these pencillings were made. In other subjects we find the same attention to truth and matter-of-fact: on the walls of old houses which have a literary or historic interest, the bills of the theatres and other announcements are drawn exactly as they appeared at the time, and show as much character as the figures in front of Sir Paul Pindar's house in Bishopsgate-street, and other parts of East London, or those in connexion with the few bits of antiquarian interest which have been drawn at the West-end.

In years to come, these illustrations will be of importance to persons who are making inquiry into the progress of the metropolis. And this worth is greatly enhanced by careful and copious notes made by the artist, showing the sites, and giving other particulars of many objects which are represented, and have now passed away from the view. Besides, these sketches have much artistic merit.

All who have had the advantage of acquaintance with Mr. Archer, and have at times had opportunities of accompanying him on his rambles amongst old-world matters, will remember the perseverance with which he wandered into dark alleys, amongst ruined tenements, and rookeries; by the margin of unwholesome ditches; and amongst people who required management to prevent them from becoming dangerous to intruders, in search of even the most minute fragment which would illustrate the pages of London historians. The ability of our artist in this way was extraordinary, for no fox-hunter ever entered with more zest on the chase than did he in search of some old stone or other feature which would serve to prove the former existence of more important structures. We must, however, hurry on, and note that, at the time of the decline of steel-plate engraving, Mr. Archer began to draw on wood. Some of the earliest specimens of his work are to be found in the first parts of Mr. Charles Knight's "London." Limited space prevents us from giving any detailed account of the numerous examples of this kind, which form but a limited portion of this artist's works; and must therefore be content with the mention of "Choosing the Wedding Gown," after Mulready; several of the beautiful wood engravings after Mr. George Lance, which have appeared in the pages of the *Illustrated London News*; and the illustrations to "Blackie's Comprehensive History of England," an impression of which was edited by the artist.

Amongst the miscellaneous works of Mr. Archer were several monumental brasses: one of the most remarkable was a large bronze tablet—ordered for India by Lord Hardinge—to the memory of the distinguished officers who fell in the battles of the Punjaub. This was a very elaborate work, the ornamentation surrounding the inscription being of Eastern pattern, and consisting of flowers, elephants, lions, &c., the whole being inlaid with colours. The colouring was a difficult matter, and required unusual means; for tinted wax—or sealing-wax, as it is called,—prepared with shellac, or pigments mixed with oils or varnishes, would speedily have perished in the heat of the Indian climate. To meet the necessity, Mr. Archer prepared a filling-in substance, including silica as a medium, which after a season became as hard as flint, and which but little deadened the brilliancy of the hues. This memorial was exhibited in the Great Exhibition of 1851. In the execution of this and other monumental brasses, the artist used a process of outlining the letters and devices with the graver, and coating over with a wax preparation, which was of sufficient strength to resist the acid which was applied to reduce the sunken parts.

Amongst the other labours of Mr. Archer, we may mention a handsome folio volume of etchings (vestiges of old London) of subjects selected from the sketches in Mr. Twopenny's collection (this was published by the late Mr. Bogue); a series of very able and amusing illustrated papers, called, "The Recreations of Mr. Zigzag the Elder," which might well be reproduced; and some pleasant articles and sketches, illustrating a ramble along the Roman wall; he also contributed extensively to the *Gentleman's Magazine*, the *Illustrated London News*, and many other well-known periodicals. Chiefly, we believe, in consequence of an inspection of the drawings in Mr. Twopenny's possession, the Duke of Northumberland gave a commission, the execution of which afforded Mr. Archer the greatest pleasure: this was, in the course of each summer, to make sketches of the interesting antiquities which are so thickly scattered over his grace's extensive estates. Sometimes, when no other lodging but a shepherd's hut, amongst the wilds of the Cheviots, was to be had, the artist, with a most praiseworthy degree of care, spent long intervals in drawing the singular remains of a people who have been long since forgotten; and at other times the farm in Holy Island, old castles and churches, and many a time-honoured spot, occupied Mr. Archer's attention during these, to him, delightful rambles. Already his grace is in possion of a large number of these drawings, which are as remarkable for their artistic qualities as they are for being faithful transcripts of nature; and it is worthy of notice, that as the experience of this artist advanced, his attention to detail increased also; but this was managed without interfering with the breadth or boldness of his works.

Mr. Archer has been for long an associate of the new Society of Painters in Watercolours; but his varied occupations prevented him from being a very prominent exhibitor. During many years the subject of our brief memoir had collected extensive and valuable materials, with a view towards corrected histories of London and Northumberland; and the last time the writer met Mr. Archer, he spoke hopefully of making those matters the quiet labour of his age. Unfortunately this idea has not been realized. About three months ago, Mrs. Archer, to whom her husband was greatly attached, died somewhat unexpectedly, although after a long illness. This bereavement was seen by his friends to have been Mr. Archer's death-blow. He declined in health, but immediate anger had not been apprehended, when he expired on the morning of the 25th ultimo, to the grief of his family and a large circle of friends. The life of the deceased did not pass without trials, but these he vigorously battled with, and, by honesty and earnest industry, eventually overcame. His pleasing, gentlemanly manner and amusing conversation will be remembered by many; but those who had been most closely connected with him will most deplore his loss.

COMPENSATION CASE UNDER THE THAMES EMBANKMENT ACT.

On the 27th ult. the first case under the Thames Embankment Act came on for hearing at the Sheriff's Court, Red Lion square, before a special jury, under the presidency of Mr. C. Pollock, in the case "Gwynne *v.* The Metropolitan Board of Works," where a claim was made for 30,000*l.*, in respect of premises at the bottom of Essex street, near Temple-pier, where the business of an hydraulic and mechanical engineer was carried on. The case involved an important question, and was likely to affect the cases arising out of the Thames Embankment. It was whether the supply of water from the Thames, which was necessary for the business, could be cut off without compensation. Mr. Gwynne alleged that he should be obliged to remove, and had taken premises at Battersea, for which he had paid 7,000*l.* He proved that he was supplying hydraulic pumps, as shown at the Great Exhibition, and was turning 50,000*l.* a-year. His net profits last year were 10,000*l.* and upwards. On the other hand, it was stated that the premises were not required. Mr. Lloyd, Q.C., with whom was Mr. Horace Lloyd, appeared for the claimant; Mr. Lush, Q.C., Mr. Karslake, Q.C., and Mr Raymond, for the Board of Works. At nearly five o'clock the further hearing of the case was adjourned to the 6th of June.

THE MONUMENTAL ARCHITECTURE AND SCULPTURE OF THIS COUNTRY DURING THE MIDDLE AGES.*

I NOW proceed to the consideration of the principal of the sepulchral monuments of the thirteenth century, when both the architecture and sculpture of this country are deserving of deep attention and study. Recumbent effigies of life-size on tombs are now common: the tombs themselves are generally low,—perhaps, with the effigy, consisting of a single slab; if covered on the sides with architectural detail, not more than a foot or two in height. The effigies are in relief,—of higher relief indeed than those of the twelfth century, but still in relief. There are some tombs of this period with canopies over them, profusely covered with architectural detail, but they are not many in number. The canopied monument in Salisbury Cathedral of Bishop Bingham, who died A.D. 1246, with his recumbent effigy beneath; and that in York Cathedral of Archbishop Walter de Gray, who died A.D. 1255, with his recumbent effigy beneath; and the monuments in the same cathedral of Archbishop Sewal de Bovil, who died A.D. 1258, and of Archbishop Godfrey de Kineton, who died A.D. 1264, are architectural compositions worthy of study. These canopied monuments probably took their origin from the ancient herse under which the body was placed in the church prior to interment. The monument in Exeter Cathedral, ascribed to Bishop Marshall, who died A.D. 1206, consists of a tomb nearly 3 feet high, on which lies the recumbent effigy of the bishop. The sides are covered with quatrefoils inclosing sculptured figures and heads, and the spandrels are filled with a profusion of stiff-leaved foliage. It appears one of the richest tombs of this century. The tombs of this period were generally low and plain, though in some instances covered with quatrefoils, as the tomb in Peterborough Cathedral of Abbot Alexander, who died A.D. 1226. The sculptured recumbent effigies of this century are generally confined to those of regal rank, those of the higher orders in the church, bishops, and priors, and the armed effigies of knights. We have the Royal effigy in Worcester Cathedral of King John, who died A.D. 1216; in Westminster Abbey, of Henry III., who died A.D. 1272; and of Eleanor, Queen of Edward I., who died A.D. 1290. The effigy of King John is sculptured in high relief from a coffin-shaped slab which originally covered the stone coffin in which his body was placed: it is now set on a high tomb of much later date than the effigy, and this was probably erected soon after the burial of Prince Arthur, son of Henry VII. The effigies of Henry III. and Queen Eleanor are of copper, but admirably designed: the folds of the drapery are few and well disposed, with great breadth and taste. One or both of these effigies are considered to have been executed by Italian artists. Henry III. was partial to the fine arts; and, notwithstanding his tumultuous reign, a school of art sprang up under the auspices of his example, which surpassed any previous native school, and is even at the present day worthy of elaborate study.

The materials out of which the effigies of the thirteenth century were chiefly sculptured consisted of blocks of dark-coloured marble, destined to be the covers of stone coffins. When ecclesiastics were represented, which they were at this period always in the vestments worn in the performance of the most solemn rites of religion, their heads were often surmounted by elaborate canopies, sculptured horizontally on the slab, with slender shafts on each side of the body, supporting, as it were, the canopy. At the feet of the ecclesiastics of this period a dragon was often represented, in allusion to the verse in the Psalms, "Thou shalt tread upon the lion and adder, the young lion and dragon shalt thou trample under foot." Episcopal effigies are generally represented with a low mitre, holding the pastoral staff in the left hand, whilst the right hand is upheld in the act of benediction. The sepulchral effigy of a bishop in the Temple Church, London, is of this age, and thus represented. The interesting series of recumbent effigies of abbots in Peterborough cathedral are represented bareheaded, with the pastoral staff in one hand, and a book in the other. But, although a very durable material, this dark-coloured marble was difficult to work, and there is consequently a degree of stiffness observable

* By Mr. M. H. Bloxam. See p. 369, *ante*.

in these marble effigies which for the most part disappeared when the material was of a softer and more pliable nature.

There is one sepulchral effigy of an ecclesiastic of this period I should notice, because it is of a singular description. It is the effigy in dark-coloured marble of a deacon, holding in one hand a scroll hanging down, which no doubt was formerly inscribed. It is in the little out-of-the way church of Avon Dassett, Warwickshire, and is placed under an ogee-shaped sepulchral arch of at least a century later than the effigy, clearly indicating a rebuilding of the chancel subsequent to the effigy being placed there. But this curious effigy, though nameless, has an historic value: it points to a period when the lower grades of ecclesiastics, deacons, sub-deacons, and even acolites, were allowed to be presented to churches as incumbents. This practice, once common, was in a great measure put a stop to by a decree of the Council of Lyons, A.D. 1274. The scroll hanging down from one of the hands is found with a few other sepulchral effigies of this period, as with the effigy of a lady in Tilton Church, Leicestershire; the effigies of a lady and child in Scarcliffe Church, Derbyshire; and the effigy of a lady of the Fitzalan family in Bedale Church, Yorkshire.

The armed effigies of the early part of the thirteenth century are generally sculptured in dark marble: most of the effigies in the Temple church, London, are of this period. They are distinguishable from the effigies of the fourteenth century not so much by the details of armour, as by the greater length of the surcoat, and also the greater length of the shield. Armorial bearings now appear on the shield, which is heater shaped, and fastened to the left arm. The effigies of ladies are stiffly designed, especially if executed in marble. There is a somewhat gigantic effigy of a lady of this period in Worcester Cathedral. On the whole, then, during the thirteenth century we may trace a considerable advance in art, both in sculpture and architecture. The patronage of the crown tending, no doubt, to foster native talent, was emulated by the nobles and the prelates of the church; whilst many of the sepulchral effigies and monuments of this age were sculptured and prepared during the lives of the persons whom they commemorate. This is very evident from the minutiæ of detail and the elaborate manner in which many monuments sculptured in dark marble have been executed. The effigy of Bishop Walter de Cantilupe in Worcester Cathedral, which fits the stone coffin in which his remains were two years ago discovered, was evidently executed in his lifetime, and by his order. In Rochester Cathedral there are monuments of dark marble of this age too elaborately worked to have been, in my opinion, executed otherwise than in the lifetime of the prelate commemorative.

Throughout the thirteenth century we may observe a gradual development of composition, taste, and feeling in the arts of architecture and sculpture. This development continued through the greater part of the fourteenth century. The native school of art never attained such perfection in this country during the Middle Ages as in that period, comprising the reigns of the three first Edwards. The exquisite sepulchral monuments then erected are described by a writer of the fourteenth century, the author of "Piers Plowman's Crede and Vision," as,—

> "Tombes upon Tabernacles, tyled opon lofte,
> Housed in hornes, harde set abouten,
> Of Armede alabaustre, clad for the nones,
> Maad opon martel in many manner wyse,
> Knyghtes in ther conisante, clad for the nones,
> All it semed seyntes, ysacred opon erthe,
> And lovely ladies ywrought, leyen by her sydes.
> In manye gay garnemens, that weren gold beten."

When these tombs stood insulated in the midst of a choir, chancel, aisle, or chantry chapel, for numerous annexations were at this period made to our churches to serve as sepulchral and chantry chapels, the tomb erected was, what was subsequently called by Leland, "A high tomb," adorned on the sides with sunk quatrefoils inclosing shields, or deeply-sunk panel-work, or housings, that is, small recesses, with tabernacle work richly carved, inclosing small statuettes representing the relatives of the person to whom the monument was erected; whilst on the top of the tomb reposed the recumbent effigy of the knight or other personage as it might be, with, ofttimes, the effigy of his lady by his side. Sometimes a gorgeous canopy of tabernacle-work surmounts the tomb. Many sepulchral effigies of this era are, however, often placed on low tombs, within arches in the walls of churches, and on the foundation and construction of a chantry chapel we find these arches formed in the walls for the purpose of sepulture. Sometimes these arches are plain obtusely pointed arches with simple architrave mouldings and projecting hoods over them. Sometimes these arches have bold ogee-shaped sweeps, the hood is richly crocketed and terminates in a finial, whilst the interior of the arch is sometimes cusped with hanging tracery. These arches are often flanked on the sides by buttresses, with triangular crocketed heads. In some instances these arched tombs have rich pedimental canopies over them, of which that over the tomb of Aymer de Valence, Earl of Pembroke, in Westminster Abbey, may be taken as an example. Though there is a diversity of design in these monuments, the general composition is decorative, bold, and good. We next come to the sculpture. As stone, varying indeed in quality according to the material of the particular part of the country, was now generally used rather than the dark-coloured marble, the facility of working it was much greater, and a greater degree of freedom and breadth may be observed in the sculptured recumbent effigies.

Up to the middle of the fourteenth century the ordinary dress, whether of civilians or ladies, the warlike habiliments of knights, the robes of monarchs, and the vestments of the clergy of different grades, from their comparative loose arrangement, and from the manner in which a judicious disposition of the folds of drapery might and were carried out, were well adapted for a display of breadth and taste in the execution of the principal effigy. The armour of the knight still consisted of mail, with a small admixture of plate to protect the knees and elbows. The loose surcoat girded about the waist with a narrow belt, and open in front of the skirts, was still worn. The cross-legged attitude which, up to this time, more or less prevailed, gave full scope for freedom in the arrangement of the drapery. These cross-legged effigies have been generally supposed to be those of knights templars, but for this conjecture there is no foundation. I think it, however, probable that the cross-legged attitude may have distinguished those called "*cruce signati*," who took the badge of the cross on contributing to others, or themselves, journeying in pilgrimage to the Holy Land, as we find occasionally effigies of laymen in this century in civil costume represented cross-legged. There is an effigy of this kind in Much Marckle Church, Herefordshire.

Sometimes sepulchral memorials were erected to many who had been long before dead. In Hereford Cathedral there is a series of recumbent effigies of bishops evidently executed during this century, at the same period, and by the same artist. A like instance also occurs in Aldworth Church, Berkshire, where we find a very curious and interesting series of monumental effigies designed and executed by the same artist. The Lumley effigies, in the church of Haughton le Spring, in the county of Durham, though not executed till the sixteenth century constitute also another instance of this practice.

Painting was much lavished at this period on tombs and effigies. One of the most valuable examples of polychrome thus applied in the fourteenth century occurs in the sepulchral effigy, in Rochester Cathedral, of John de Shepy, Bishop of Rochester, who died A.D. 1360, and whose tomb, having been long concealed, walled up on the north side of the choir, was discovered in the year 1825. The painting on this effigy, partly diapered, has been executed with great delicacy and taste. In Oxford Cathedral, the tomb with statuettes round it, and the recumbent effigy of Elizabeth Lady Montacute, who died A.D. 1352, has been richly painted. On many other monuments of this period we find, more or less, remains of painting.

From the thirteenth to the middle of the seventeenth century inclusive, painting, architecture, and sculpture, in relation to monumental effigies, have gone hand in hand. Ecclesiastical effigies of this, the fourteenth century, period, are numerous, and the vestments are gracefully disposed; so are those of ladies of rank, whose robes during the early half of the century, not conforming, as subsequently, to the shape of the body, were arranged with great simplicity, breadth, taste, and skill. There is an effigy of a lady of this period, in Worcester Cathedral, which is well worthy of study. The regal effigies we possess of this century are those of Edward II., in Gloucester Cathedral, and of Edward III. and his queen, and of Richard II. and his queen, in Westminster Abbey, all of which are well deserving of study.

In the latter half of this century the gradual change from mail armour to armour of plate, led to the disuse of the loose flowing surcoat, and the adoption in its stead, first of the cyclas, a shorter kind of surcoat, without any skirt in front, and subsequently to the *jupon*, a close-fitting vest, of silk or other material, worn over the breast-plate, as exemplified in the effigy of the Black Prince, in Canterbury Cathedral. The dress of the ladies also changed in fashion, and in lieu of the loose flowing robe, wimple, and veil, capable of such graceful arrangement, a variety of head-dresses, more or less formal, was introduced; and in the body dress the upper part of the outer robe or gown conformed to the shape of the body, whilst the sleeves were close fitting, so that though more elaborate in detail and valuable as examples of costume, the sepulchral effigies at this period, become less and less pleasing as works of art.

In the fifteenth century monumental architecture attained its greatest degree of richness and exuberance of detail. This is exemplified in the splendid sepulchral chantries in Winchester Cathedral, containing severally the tombs of Bishop William de Wyckham, who died A.D. 1404; of Cardinal Beaufort, who died A.D. 1447; and of Bishop Waynflete, who died A.D. 1486. These are not annexations to the building itself, but shrine-like structures of open screen work, and elaborate ornamentation in accessories, vaulted with stone, and erected within the cathedral, containing, in the midst, a tomb, with a recumbent effigy of the prelate whose remains it contained.

The chapel of Henry VII., in Westminster Abbey, and the Beauchamp chapel, St. Mary's Church, Warwick, are sepulchral chapels, annexations to, but not included within, the minster or church to which they are attached. The numerous details in these structures consist to a great extent of a repetition of panel-work and other sculptured accessories. The richness thus attainable is, however, at the sacrifice of taste and beauty: the effect is meretricious rather than grand or striking. It is obvious that our native Mediæval school of architecture was now in its decline.

The sepulchral monuments of the fifteenth century are very numerous: those which are canopied, but open in front, have their canopies carried horizontally, and not vertically, as in the fourteenth century: an embattled moulding, or row of that peculiar style of ornamentation called the Tudor flower, surmounts, as a crest, the horizontal cornice. The mouldings of this age may be considered angularly disposed as to their general contour: a bold cavetto or hollow moulding is, however, almost always met with. The tombs, whether under canopies or without canopies, are generally charged on the sides with armorial escutcheons or shields, the quarterings on which are sometimes numerous.

These shields are set in panels, or more frequently in square divisions foliated all round, or within a quatrefoil with numerous cuspings. These foliations, far more numerous than those in the preceding century, exhibit a greater degree of richness, and more of minute and elaborate detail, but are neither so tasty nor so beautiful as the earlier designs of the fourteenth century. Sometimes images or half images of angels bearing shields surround the sides of the tomb: sometimes the tomb is encircled with housings or small rich canopied recesses, including statuettes, or small sculptured figures, called weepers.

The effigies recumbent on these tombs are simply passive, with little variation of attitude. Two effigies, that of a warrior, or civilian, and his wife, often repose on the same tomb. Sometimes three effigies are thus placed, betokening a second marriage.

The change of armour during this century was continually progressing, and we have a great variety of detail and elaborate sculpture; but in the armed effigies, from want of drapery, there is a sameness and want of breadth in the design. In some few instances we may observe over the body armour the heraldic tabard, or cote armour, as it was called, borne in procession in splendid funerals. The heads of the recumbent effigies in armour are now for the most part represented bare, resting on the tilting helme on which we often find a large and heavy crest. The disuse of the shield on sepulchral effigies is now apparent.

The ladies are represented with wonderful head-dresses, stretched out by means of wires on either side, in a variety of fashions. Towards the close of this century the pedimental head-dress was introduced. The lady's dress con-

formed to the shape of the body down to the hips: the skirts of the gown are sometimes tastefully disposed, and the mantle, hanging down behind and fastened by a cordon in front of the breast, is often found. The vestments of ecclesiastics were the same as those previously worn, though the cut or fashion was somewhat modernized. The effigies were frequently painted, and we have many instances of polychrome applied to the tombs of this century; but the native style of art was about to disappear, and be superseded by a mixed and foreign school of art.

In the early part of the sixteenth century we have a continuation of the costly designs of the preceding century for sepulchral chapels, in the erection of the tomb-house connected with St. George's Chapel, Windsor Castle, by Cardinal Wolsey, and intended by him as a place of sepulture for his own remains. His tomb, intended to be placed therein, commenced A.D. 1524, but never finished, was designed and partly executed by one Benedetto, a statuary of Florence.

In Winchester Cathedral we have the rich chantry chapel of Richard Fox, who died A.D. 1528, and that of Bishop Gardiner, who died A.D. 1555. The latter is perhaps the latest of this class of sepulchral memorials. It exhibits, however, the change of style in architectural composition. The sepulchral chantry chapel in Worcester Cathedral of Prince Arthur, who died A.D. 1502, is a late instance of our native school of Gothic art.

The Italian school of the Renaissance as applied to sculpture appears to have preceded the change of style in architecture in this country. The magnificent tomb of Henry VII. in Westminster Abbey, by Torregiano, shows a complete change of style in both. It has no particular distinctive architectural features, and the effigy is designed after the Italian school. In the Rolls Chapel, London, we have another fine and graceful recumbent effigy, by the same artist. We also find marks of his school in the statuettes, now much mutilated, ornamenting the rich reredos of Prince Arthur's sepulchral chapel at Worcester, and in some small statuettes on the side of a tomb in St. Michael's Church, Coventry. From an early period in this century, details of semi-classic design began to creep in, and to alter, in no slight degree, the appearance of our sepulchral monuments. In the latter part of this century we perceive a total change to have taken place. Costly monuments now appear beneath coved or canopied recesses, with horizontal entablatures above, and a multiplicity of detail in the semi-classic style, comprising columns of the different orders, obelisks, escutcheons, scrollwork, and other devices, the whole painted with different colours, but with little taste, and resembling huge masses of confectionary. There are monuments of this description in Westminster Abbey. The monuments in Croydon Church, Surrey, of Archbishop Grindal, who died A.D. 1583, and of Archbishop Whitgift, who died A.D. 1604, are also good representations of the costly monuments of this era.

Amongst these, the canopied monuments of Queen Elizabeth and of Mary, Queen of Scots, though executed early in the seventeenth century, exemplify the general style of design,—huge, cumbrous, and tasteless, but costly. The monument, in one of the Stamford churches, of Cecil Lord Burleigh, is another coved or canopied monument of this description. The monument in the Beauchamp Chapel, Warwick, of Dudley, Earl of Leicester, is a specimen of costly design, but of questionable taste; not placed detached, but against the wall. Monuments of this age are sometimes placed at the east end of an aisle, where an altar had anciently been; thus blocking up the window, and defacing the architectural features of the building.

The tombs on which effigies are recumbent are divided on the sides into compartments, each containing an escutcheon surrounded with scrollwork or other accessories, and charged with numerous quarterings. A complete revolution with regard to the fashion of sepulchral memorials had, indeed, now taken place.

Hardly any of the clergy but bishops and deans were now represented in recumbent effigies. In lieu of the ancient vestments in which the most solemn offices of the church, before the change of ritual, were performed, the rochet and chimere, with the square cap and tippet, were worn, and sometimes the cope. In some instances, in lieu of these habits, the academical doctor's gown is worn, as in the effigy of Archbishop Grindal in Croydon church, Surrey. In this diversity of apparel we may see traces of historical import, of that bitter controversy on the vestments and church discipline which broke out in 1554, and continued to the close of the civil wars in the seventeeth century.

We have during this century few sculptors of note, or of those whose works we hold in estimation. The majority of sepulchral effigies are simply correct, some indeed executed coarsely, others in more workmanlike style. Many effigies are sculptured in alabaster, a material introduced in the fourteenth century. These we often find in a mutilated condition, whilst effigies of freestone of an earlier period are perfect. This state of mutilation I rather attribute to the effigies having been sculptured in different pieces, fastened together by cement or plaster, and become loosened. We have now numerous small kneeling figures of children, one behind another in gradation of size, the males on one side the females on the other, facing them. In a compartment above these we have the father and mother, represented of a larger size, and kneeling opposite to one another before a double faldstool or prie-Dieu. On the sides of tombs also, we find, not unfrequently, these small kneeling figures. Mural monuments with kneeling figures came into fashion during the latter part of this century: we meet, indeed, with a few mural monuments of an earlier period, but they are of very rare occurrence.

Recumbent effigies of males not ecclesiastics are generally, as before, represented in armour; ladies in ruffs and open gowns or fardingales —the crinoline habit of the period—worn over richly worked petticoats.

The effigy of Henry VII., and the effigies of Queen Elizabeth and Mary Queen of Scots are the only recumbent effigies of monarchs that pertain to this period: that, indeed, of Queen Elizabeth is the latest recumbent effigy we have of a monarch represented on a tomb. Since the commencement of the seventeenth century no sculptured sepulchral memorial exists over the remains of any sovereign of this country.

The suppression of the monasteries in the early part of the sixteenth century was followed by a very general, though not total, destruction of the monuments contained in the churches belonging to them: where, however, the monastic church, or a portion of it, as was frequently the case in towns and cities, was preserved for parochial worship, the monuments were preserved: still the minds of many were averse to them from their reputed connexion with the old worship, and an indiscriminate destruction of many might have taken place but for a royal proclamation, which was found necessary, against the defacers of sepulchral monuments.

We sometimes find represented skeletons, the lively pictures of death, and emaciated corpses, beneath the recumbent effigies of persons of note, ecclesiastics or otherwise. This practice originated in the fifteenth century, and lasted to the middle of the seventeenth.

The large canopied monuments of the seventeenth century were plainer, more devoid of ornament, and yet more cumbrous than those of the sixteenth century. A huge square-shaped tester, supported by columns of various coloured marbles or alabaster, and of different orders, with a wide valance, formed the canopy over a tomb, either plain, or on which one or more effigies reposed. This tester-like canopy appears to have been in imitation of the funeral hearse, —not a carriage, but a temporary erection of wood and black cloth, profusely decorated with escutcheons, set up in the church, beneath which the coffin of a person of note, whose funeral was marshalled by the heralds, in due accordance with precedent, was placed; for not only religious services were here performed, but heraldic observances exemplified in the carrying, in procession, not the real but the supposed armour of the deceased,—the helmet with its crest, the targe or shield, the sword, the spur, and the tabard, or what was called "the cote armour," together with divers banners, banner rolls, and pennons; and these were first offered at the altar or communion table, in a certain prescribed form, and were then set up against the wall over or near the grave of the deceased. This custom has fallen into disuse; but thus it is we often find in churches tattered flags and remains of armour fixed up against the walls. These are no other than the remains of the old funeral achievement which was thus carried in procession, but has now degenerated into the lozenge-shaped escutcheon, many of which escutcheons we sometimes find placed against the walls of our churches.

Having thus explained what I believe to have been the origin of these tester-like canopies; I may adduce an example. Such a tester-like canopy, with a valance on each side, appears over the tomb in the chapter-house adjoining the church, once collegiate, of St. Mary, at Warwick, of Fulke Greville, the friend of Sir Philip Sidney. The tomb beneath this canopy is shaped like a sarcophagus.

Other high tombs of the early part of this century have escutcheons or shields, sometimes with supporters, on the sides and ends, and sometimes kneeling figures of children. The position of effigies on tombs at this period was not always recumbent, a very usual position was now that of one reclining on his side, with his head supported by his right or left hand, the elbow leaning on a cushion, as in the monument in Croydon church of Archbishop Sheldon, who died A.D. 1677. Sometimes, but not often, we find a monumental effigy, in a sitting attitude, as that in Canterbury Cathedral of Dr. Boys, Dean of Canterbury, who died A.D. 1625, and that fine and interesting monumental effigy, in St. Michael's Church, St. Alban's, of Francis Bacon Lord Verulam, who died A.D. 1626. This statue represents him sitting in his chair, clad in his ordinary habit, doublet, trunk hose, and broad toed shoes, with his hat on his head, in the attitude of meditation, and as the inscription beneath tells us, "*Sic sedebat.*" I know not the name of the artist by whom this monument was designed and executed, but it is one by no common hand. My ideal of a memorial statue to Shakspeare would be such a one as that erected to the great Lord Verulam: the treatment of the somewhat uncouth costume is exceedingly well managed. Lord Verulam died only ten years after the death of Shakspeare, and the ordinary habit of both would, in fashion, be the same or nearly the same.

Sir Francis Chantrey, before modelling his design for those exquisite monumental sculptures of the two sleeping children in Lichfield Cathedral, is said to have gone to Ashbourne, and studied there the admirable sleeping figure, by Banks, of Miss Penelope Boothby. Why should not one intending to design a monumental statue of Shakspeare study that of his contemporary, the greatest philosopher of his age?

We have numerous cumbent, kneeling, or reclining effigies of this period, many interesting from the variety of costume. There is a class of effigies nearly confined, I think, to this century, representing the body in grave-clothes, tied at the head and feet. Dr. Donne's effigy was of this class, a mutilated fragment of which is preserved in the crypt of St. Paul's Cathedral. A monument of no less than four erect figures, in winding sheets, is set up in Maidstone Church, Kent, and a monument of two erect effigies thus draped, in East Carlton Church, Northamptonshire. In Bentley Church, Derbyshire, on a high tomb, is a recumbent effigy thus draped, and round this tomb is a singular series of smaller effigies, all represented in grave-clothes. The recumbent effigy of the Duchess Dudley, in Stoneleigh Church, Warwickshire, and that of her second daughter Frances Kniveton, in the church of St. Giles-in-the-Fields, Westminster, are also of this class. In East Barsham Church, Norfolk, is the effigy of Mrs. Mary Calthorpe, who died in 1640. She is represented in a winding-sheet.

In the latter half of the seventeenth century we find the practice of erecting upright effigies on the increase. Many of these, representing members of the nobility, are sculptured in their robes of state: others are represented in classical or Roman costume. In Yarmouth Church, in the Isle of Wight, is a fine statue of Italian or Sicilian marble, evidently of foreign execution, of one in the garb of a Roman warrior. This is a memorial of Sir Robert Holmes, governor of the Isle of Wight, who died A.D. 1692. The profile of the head of this statue appeared to me, when I saw it, now many years ago, to be excessively like the well-known profile of Louis XIV., king of France, known also as "Louis le Grand." Now, putting a question to the cicerone, a woman, who showed me the church, she told me a story about this statue having been a prize and taken with a ship during war time. If this be true, it may turn out that this statue is no other than one of Louis le Grand, but here set up as a memorial to another.

Mural monuments containing sculptured busts, were of a numerous class during this century. One of the earliest and perhaps the most interesting of these is the rude old bust of Shak-

speare in the church of Stratford-upon-Avon, rude as regards artistic execution: it was executed by one Gerard Johnson, who also executed the full-length recumbent effigy near it of John Combe; but it has, in the opinion of eminent judges, the late Sir Francis Chantrey and others, been evidently sculptured from a cast. It therefore presents the *vera effigies*, the only true resemblance we have of that most remarkable man, to whose undying memory we have lately paid all homage. We have also the full-faced bust shaped effigy in relief of the venerable and learned divine, Hooker, in Bishopsbourne Church, Kent. He died A.D. 1600. And in Upper Shuckborough Church, Warwickshire, we have the very image of an old cavalier, in the bust of Sir Richard Shuckborough, who, in the civil wars of the seventeenth century, being personally appealed to by his sovereign, raised and armed his tenants, and fought manfully, though unsuccessfully, on behalf of the Crown. The face, with the moustache over the upper lip, and peaked beard, is not unlike the head and bust of Charles I.

Many tombs of this period, both with and without effigies, are backed by a kind of architectural composition, consisting of Corinthian or Doric columns sustaining a divided pediment. Within this composition is a panel containing the inscription. The Lee Warner Chapel, in Rochester Cathedral, contains three monuments of this class, which is a sufficiently numerous one. They were executed by an artist of the name of Marshall. These monuments are generally composed of black and white marble, and the opposition of colour adds greatly to the relief. We sometimes find fine sculptured effigies of Italian marble, designed and executed in a superior style. Such are to be found in Campden Church, Gloucestershire, in Gloucester Cathedral, in Ludlow Church, Salop, and in a private chapel near to Ludlow. These works of art are to be considered the production of either Herbert le Sœur, a Frenchman, of Francesco Fanelli, a Florentine, or of Bernini. A fine monument by the latter, with the reclining effigy of Sir Thomas Lucy, who died A.D. 1640, and sculptured accessories in relief, is in the church of Charlecote, near Stratford-upon-Avon.

To Nicholas Stone, a sculptor of no mean eminence during the early part of this century, we are indebted for some noble memorials worthy of admiration. Though we have not a complete list of his works, we have notices of several, as that fine specimen of the Lady Latimer in Stow Church, Northamptonshire; sepulchral effigies at Watford, in Hertfordshire; at Cottesbrooke, and at Brington, Northamptonshire. In his arrangement of the figure, Stone appears to have broken through the monotonous, stiff, and stereotyped ideas of the age preceding him.

Indeed, it is to Nicholas Stone, Le Sœur, Fanelli, and Bernini, that we may trace the foundation perhaps of the school of modern sculpture; not but that much was owing to the collection of antique marbles acquired by Thomas Howard, Earl of Arundel, who died A.D. 1646, which collection was, I believe, the first introduced into this country.

I must not omit to state that Grinling Gibbons, the inimitable carver in wood, who flourished during the latter part of the seventeenth and early part of the eighteenth centuries, was also a sculptor, executed a splendid tomb in Easton Church, Rutlandshire, for Baptist Noel, Viscount Campden, with the effigies of him and his lady, and bas-reliefs of their children.

At the commencement of my remarks, I adverted to the ancient sepulchral monuments of this country in the ancient cemeteries and burial-grounds, which must be distinguished from those contained in our churches; and I brought my remarks upon these monuments down to the close of the twelfth century.

Now, although, in by far the greater number of the ancient graveyards surrounding our churches, we find no memorials of an earlier date than the seventeenth century; and we also find churchyard monuments, even of that century, not so common as we might imagine, except in districts abounding in stone; there are yet to be found, scattered over the churchyards of this kingdom, a considerable quantity of sepulchral memorials of earlier date, many of which may be ascribed to the thirteenth, fourteenth, and fifteenth centuries: some of these consist of sepulchral effigies: others are more or less covered with architectural detail.

In some churchyards, especially in Kent, we find circular head-stone sepulchral crosses, nine or ten inches in diameter, about three or four inches thick, on a plain stem about four inches wide, and the same height above the level of the ground. On some of these, the most simple form of cross is incised by plain vertical and transverse straight lines, on each side of the face or circle. On other circular head-stones, foliated and globular *pattée* crosses appear in relief in many a varied design. These sepulchral crosses I should ascribe, some to the thirteenth, some to the fourteenth century. We often find fragments of ancient crosses of this description, in the demolition of old churches, in the walls or foundations of which they were built up or imbedded.

A number of ridge-shaped coffin-stones, wider at one end than the other, with crosses and other emblems raised in relief, are to be found in many of our churchyards, especially in those parts of Huntingdonshire, Northamptonshire, and Rutlandshire, lying contiguous to each other; for even in churchyard monuments we find a provincialism to prevail: that is to say, one peculiar style of ancient churchyard monument, though it may be found elsewhere, prevails more or less in one district; another kind in another district.

We also find flat slabs, or coffin stones, wider at the one end than the other; and this is an indication of antiquity. Ancient sepulchral slabs in the form of parallelograms, or of equal width throughout, bearing crosses raised in relief, or incised upon them in many a varied fashion, may be ascribed to the fifteenth century; and sometimes by the sides of the stem of the cross are incised other devices, as a sword, a shield, a horn, a pair of shears, and so forth, emblematic of the calling of the person commemorated. Many of these incised sepulchral slabs are found in the north, as in Cumberland. Some are worked up into the walls of the churches there.

In the fourteenth century it was by no means a rare practice for sculptured recumbent effigies to be placed as sepulchral memorials in churchyards, as well as in churches. These effigies we generally find much abrased from exposure and the effect of the weather. When I first commenced my study of this subject, I thought that these monumental effigies had been removed from churches. I am no longer of that opinion. I will not relate to you in a tedious detail the different churchyards in which these effigies are to be found. In the churchyard of Brailes, Warwickshire, is the sculptured recumbent effigy, in stone, of a priest, on a high tomb, panelled at the sides, of about the latter part of the fourteenth century.

In the churchyard of Loverscal, near Doncaster, South Yorkshire, is a curious high tomb, evidently erected in the latter part of the thirteenth century, or early in the fourteenth century. The covering slab, flat on the surface, bears a foliated cross and sword, raised in relief. The sides of this tomb present a very singular appearance. They are worked in sunk panel-work, in imitation of a series of windows in the Transition style, from Early English to Decorated. Each window is designed differently. We sometimes find the sides of fonts thus decorated, but this is the only instance of a tomb I have found so adorned.

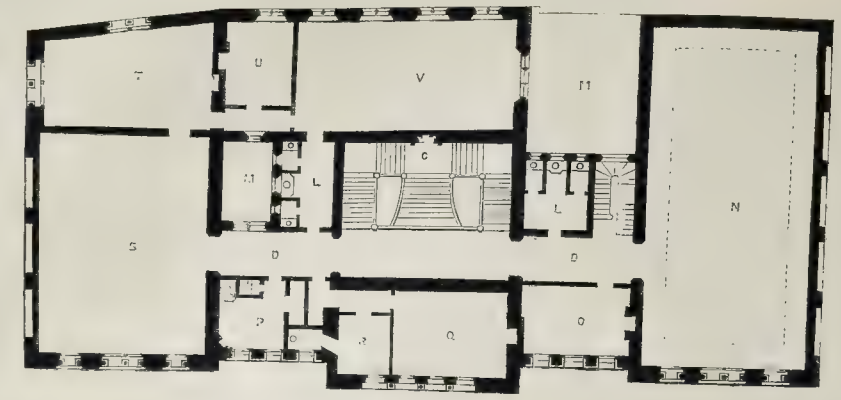
In Astbury Churchyard, Cheshire, is a tomb of the fourteenth century, with a pedimental-shaped canopy over it, with hanging tracery. This is a design which, though much defaced and weather-worn, is deserving of considerable study.

In the external walls of churches we sometimes meet with sepulchral arches of the thirteenth or fourteenth centuries, mostly plain in design. Sometimes beneath this arch is a sepulchral effigy, as that of a priest at Brington, Northamptonshire; sometimes a plain sepulchral slab, or one bearing a cross.

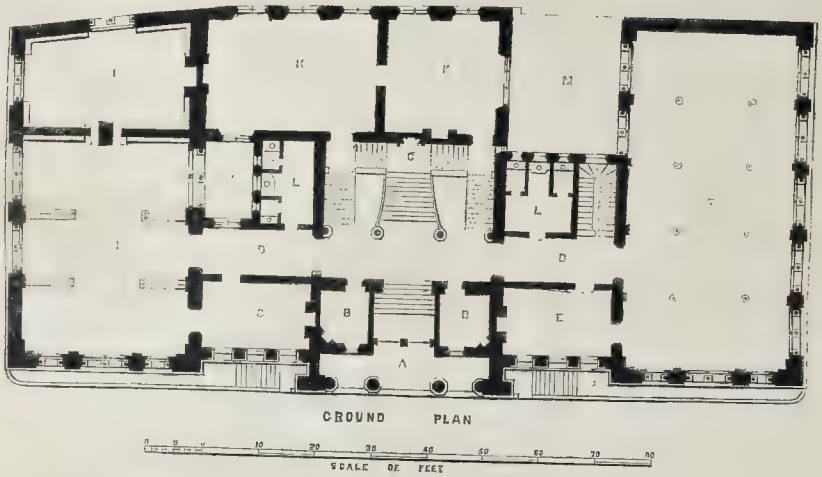
Of churchyard monuments of the fifteenth century I may notice a fine engrailed headstone cross in the churchyard of Detling, Kent. The fragment of a sepulchral cross, nearly similar in design to that at Detling, but with an inscription within a hollow moulding along the transverse, was, some years ago, preserved in St. Martin's Church, Canterbury. This last description of sepulchral cross, with an addition beneath to carry an inscription, has been very appropriately adopted in several churchyards in my neighbourhood.

In the churchyard of Church Handborough, Oxfordshire, are two small plain gable-headed sepulchral crosses, one standing 14 inches the other 16 inches in height. These are very similar to the sepulchral crosses we find delineated in illuminated manuscripts in illustration of the burial rites of the Middle Ages. They were, however, most frequently made of wood, and have consequently thus perished; and in the will of John Coote, dated A.D. 1502, and preserved in the registry of Bury St. Edmunds, is the following entry:—"Also I wole so aft my decesse to have ij crosses goodly of tymber, on at my hede the tother at my feete, wyth my armys y' vpon, and also a wrytyng to p^ay people of ther charite to p^ay for my soule."

We find many high tombs—the term "high tomb" is given by Leland to signify the table or altar-shaped monuments of and prior to his time—of the fifteenth century in our churchyards, especially in those in Oxfordshire and Somersetshire. The sides of these tombs are filled with quatrefoils boldly sunk. These are sometimes placed within circles, and the quatrefoil contains a four-leaved flower in relief. Sometimes the quatrefoils inclose shields, and the spandrels are cusped or sunk. The sepulchral monuments of this description in our churchyards, though in one sense rare, are, in another sense, too many for particular enumeration.



One of the latest monuments or high tombs of this class is in the churchyard of Mutchingly, Somersetshire: it is one, apparently, of the early part of the sixteenth century, erected, either immediately before or just after the suppression. The sides of this tomb are covered with ogee-headed panels, the heads of which are cinque-foiled within, and in the spandrel of each panel is a circle inclosing a trefoil. There are many other details of which I cannot now speak; but I think it not improbable that this may have been the tomb of one of the last of the heads of the conventual establishment at Mutchingly, remains of which religious house are still existing near or contiguous to the churchyard on the south side.



Panelled church-yard monuments came down to the seventeenth century. I could say much more on this branch of my subject, but time will not allow.

Sculptured effigies of the seventeenth century have also been erected in our churchyards. I will only mention one: it is the effigy, in a reclining position, of a Captain Kingsmill, who, fighting as a Royalist at the battle of Edge-hill, A.D. 1642, was slain, and his body buried in the churchyard of Radway-under-the-Edgehills. Nearly forty years after his death a monumental effigy was set up over his grave. This, however, represented him not in the costume, the military accoutrements, worn at the battle of Edge-hill, but those worn at the time this effigy was executed, in the latter part of the reign of Charles II.; for in lieu of the plain falling collar, or elaborately worked vandyke collar of the reign of Charles I., he is represented in the laced flowing cravat of the close of the reign of Charles II.: the other details of his dress differ accordingly. This effigy, a remarkable and most interesting one, now much mutilated, has been removed from the churchyard into the church. It is interesting in a general view in this way: it represents him, as the stereotyped expression of old topographical works tells us, "in the dress of the times," not of those times in which he lived, but of those times in which this effigy was sculptured and set up.

For reasons I will not now dwell on, I have not ventured to bring down my subject to a later period than the close of the seventeenth century.

In conclusion, it is difficult in the space allotted, to do more than give, and that but imperfectly, a very short and succinct account of the most interesting of all our national antiquities,—for so they may well be considered,—our ancient sepulchral monuments. Diversified in form, style, and execution, in each succeeding age; as memorials of the past, they convey to the mind the customs, the practices, the attire, regal, military, civil, and religious, changes in rites and ceremonies, even the controversies, of former times. They are evidences of the affectionate remembrances of friends, of the posthumous honours paid to those who had done good service to their country. They exhibit the germs, rise, and progress of art, its decadence and subsequent revival. In whatever aspect we view them, they are worthy of our deep attention: there is much in every way to be learnt from their study. Lastly, they point to the future: they remind us that we are beings endued with reason; that we are not as the beasts which perish.

MUSEUM AND ALBERT MEMORIAL, EXETER.

MONUMENT TO BISHOP BLOMFIELD IN ST. PAUL'S CATHEDRAL.

WHAT has become of the plan, which seemed cordially received at the time, for erecting such a monument to this distinguished and useful prelate, which seems to have been long in abeyance? He assuredly well deserves it at the hands of the clergy and attached laity of the metropolis, and, by reflection, of the country; and willing contributors might yet occur in his former diocese of Chester. The neglect is, of course, not toolate for remedying. The following idea, or its substance, was suggested some years back, as part of an inscription:—"The Prince of Church-building Bishops since the Reformation. He desired the erection of fifty new churches for London and its suburbs. He lived to see nearly one hundred completed."

THE PROPOSED EXETER ALBERT MEMORIAL.

THE building is to contain a museum, school of art, and free library. The walls are to be built of brick, relieved by quoins and bands, and limestone, which material is also to be used for the walls up to the ground-floor level. The windows are to be of freestone, with detached shafts of marble, the glass being set back in wooden framework on the inside of the walls. The principal internal feature will be the great staircase 30 feet by 24 feet, common to the whole building, and lighted by a lantern. It is proposed to place a full-length statue of the Prince Consort in a niche at the top of the central flight, and to employ mural decoration both here and, as far as possible, throughout the building. The corridors, to the right and left on both ground and upper floors, will be vaulted in stone, and paved with encaustic tiles.

The museum for antiquities, and the free library, are to be on the ground floor, as well as two rooms for classes of scientific study. On the upper floor will be the museum of natural history and the school of art,—the various rooms of the latter being all connected together.

The principal portions of the building will be warmed by hot-air apparatus contained in the basement, and the smaller rooms by open fireplaces. Ventilation will be effected by means of extraction flues, from the whole building, carried into the tower. Provision is made in the basement for a laboratory in connexion with the scientific class-rooms on the ground-floor, for the hot-air apparatus, and various store-rooms for the several parts of the building. It will also contain two large cellars with external access, which might, if thought desirable, be let at a good rental. Apartments for the attendants are provided in the roof.

Twenty-three designs were submitted in competition for this building, from which that by Mr. Hayward, of Exeter, here described and illustrated by a perspective view and plans, was selected for the first premium.

Ground Plan.

A. Arcade.
BB. Porter's room.
C. Staircase.
DD. Corridors.
E. Curator's rooms.
F. Museum of Antiquities.
G. Librarian's room.
H. Free library.
I. Reading-room.
KK. Rooms for scientific classes in connexion with the laboratory, in the basement.
L. Lavatories, &c.
M. Courts.

Upper Plan.

C. Staircase.
DD. Corridors.
L. Lavatories, &c.
M. Courts.
N. Museum of Natural History, with gallery on four sides.
O. Museum of Numismatics.
P. Attendants' room.
Q. Ladies' class-room.
R. Retiring-room.
S. Elementary class-room.
T. Painting-room.
U. Master's room.
V. Room for casts.

(P, Q, R, S, T, U, V: School of Art.)

SELECTED DESIGN FOR THE EXETER ALBERT MEMORIAL MUSEUM.—Mr. Hayward, Architect.

CONDITION OF THE SOLDIER.

A CONSIDERABLE improvement has taken place in the men who compose the British army and navy: barracks have been made more wholesome, and the new ones which have been reared are of better construction: schools for the soldiers and their children have been opened at the various military depôts, and elsewhere: the medical inspection of the men, both in time of sickness and in health, is extensively practised; and gymnastics are made a part of the drill of the soldier: the costume also has been changed; and all these introductions have already been of marked advantage. Persons complain of the increased cost, and compare the charge of our army with that of France. In connexion with this matter Major O'Reilly lately remarked in the House of Commons, that the French army, which now consisted of 400,000 men, cost seventeen millions sterling; but if the men were as highly paid, as well pensioned, and had as costly medical attendance as English troops, and were recruited to and from the colonies at so great an expense as in our army, the additional cost wouldbe 34*l.* per man, or 30,000,000*l.* altogether. But if, in addition, the French adopted the English system of clothing, paying for military law, stores, education, and administration, the total would be increased by 5,000,000*l.* On the other hand, if our expenditure were pruned down in the last-mentioned items, the difference in our army, which does not consist of nearly half the number of the French, would be about 2,000,000*l.* Savings might, doubtless, be effected in some departments; but, in making seemingly economical changes, we must not lose the evident advantages of those social and sanitary reforms which have been with so much difficulty forced upon the Parliament and the Government. Furious battles have been fought by earnest persons for the salvation of life and increase of comfort amongst the men who compose our army; and the result is evident; for in 1850, 1851, 1852 the number of deaths in the army was 29 per 1,000; while the returns of ten years later showed a death-rate of only 18 per 1,000; and we have faith that, as new and well-arranged barracks come into use, the old ones altered or removed, and the proposed changes carried out, this rate will be materially decreased; but, as it is, the saving in our army is equal to about 2,200 men's lives in the year.

Any one who has been in Charles-street, Westminster, or in other recruiting neighbourhoods, or who has seen the bands of recruits in and near Woolwich, passing through the London streets, waiting at the railway-stations, or marching through Liverpool and other large towns, may readily form an idea of the raw material of the British army, and judge of the large extent to which they require working up in their social condition.

Wonder is sometimes expressed that, when so much distress exists in Bethnal-green, especially amongst the Spitalfields weavers, more of the young men from that district have not entered the service of the Queen; but, for the most part, they are physically incapacitated, either by the want of sufficient height in proportion to the age, or of sufficient width across the chest. The physician and surgeon must report that the intended soldier is free from any disease: he must be perfect and without blemish in every limb: his teeth must be complete; his voice clear and distinct; and his eyesight of more than usual clearness and length of range.

We refer to the above facts in order to show that, with so much care in selection—for, besides passing the medical examination at the recruiting depôt, the young soldier has also to pass the scrutiny of the regimental surgeon,—and as the men of the army when they join are in the flower of health and strength, of the proportions which should insure a long life, and of ages ranging from eighteen to twenty-five years, with the general term of enlistment limited to ten years,—it is very clear that in time of peace 15 deaths in 1,000 is very greatly in excess. It would be a most unwise policy to suspend our sanitary exertions, or, in order to seem to save money, fall again into those conditions which have caused such known loss of human life.

THE DUBLIN EXHIBITION OF 1864.—The Exhibition was opened on the 25th ult. The Lord Lieutenant was unfortunately absent through indisposition. A collection of pictures is included, and some other works of art.

NEW MATERIALS FOR THE LIFE OF PAUL VANSOMER.

IN the Privy Council Register of the Crown, under the 30th of June, 1621, is the entry of a warrant to "The Treasurer of the Chamber" for the payment of *sixty pounds* to Paul Vansomer for two full-length portraits of King James I. and the Prince of Wales, afterwards Charles I.: the entry adds,—"To be delivered to the Polish ambassador." For the knowledge of this interesting payment to Vansomer (now first published) I am again indebted to the varied reading and courtesy of Mrs. Everett Green.

The Polish ambassador was Osalinskie Count Palatine of Sindomerskie, who came to London in great state, and was lodged and dieted, at the king's expense, in the Crutched Friars. He left in equal state. "The Polonian ambassador," says the master of the ceremonies at that time —Sir John Finett,—"not long after departed, having obtained of his Majesty (by the cunning assistance of the Count de Gondomar), the loan (I may say the gift, as never to be restored) of ten thousand pounds sterling." The master does not add that the count carried with him as well full-length portraits, price 30*l.* a-piece, of King James and baby Charles, from the pencil of Vansomer.

Queen Anne of Denmark encouraged Vansomer, and at her death was in the painter's debt: witness the following posthumous payment,—170*l.* for "pictures:" 1,000*l.* at least of our present money:—

"To Paul Vansomer upon the Counsells Warr^t. dated at Whitehall iiij^to ffebr 1619 for diverse pictures by him made for the late Quene's Matie as appear'th by a bill of p'rticulers anexed to the warr^t,—clxx^li."

I hunted in vain for the "bill of particulars."

Surely some Scottish antiquary, William Stirling, esq., of Keir, M.P.; or Mr. David Laing, of the Signet Library, can name the whereabouts of the pictures referred to in the following entry:—

"To Paull Vansomer upon the Counsells warr^t dated at Whitehall iij^o November 1619 for making by comandem^t his Maties picture and the late Quenes delivered to Sr Robert Anstrother,—lx^li."

Thirty pounds a piece,—that is, some 150*l.* of the money of Queen Victoria.

"To Cornelia Vanzomer executrix to Paull Vanzom^r upon the Counsells Warr^t dated x^mo Octob^r 1621 for two whole pictures of his Matie and one of Prince Henry made by his Maties speciall comaund,—xx
iiij x^li."

"To Cornelia Vanzomer wyfe of Paull Vanzomer picture drawer upon the Counsells warr^t dated decimo Januarij 1622 for drawinge his Maties picture at length given to the Erle of Holdernes,—xxx^li."

"To Cornelia Vanzomer wife to Paull Vanzomer picter drawer upon the Counsells warr^t dated at Windsour viij^mo Julij 1622 for his Maties picture by him drawen and given to Mr. Gibb,—xxx^li."

Vansomer lived in the Strand, in London, on "the waterside," next door to Sir Edward Dymock, the Champion of England. In the Rate Books of St. Martin's-in-the-Fields he is described as "Mr. Vansomer." He was of good standing in the parish. A daughter, Lucy Elizabeth Vansomer, was baptized in St. Martin's on the 23rd of September, 1618, and buried the 6th of October following.

In "A list * of His Majesty's Pictures as they are now (1697) placed at Kensington House," I observe the following:—

In the Great Bed Chamber—

"Vanzomer.—King Charles ye 1st (at length) in Coats'
Vanzomer.—Prince Henry in Armour to the Waste."

Are these traceable? King Charles "in coats" would, indeed be a curiosity.

A very fine original by Vansomer may be seen in the Painted Hall at Greenwich, a full-length of Lord Charles Howard of Effingham, the Armada Earl of Nottingham. He is in his robes, with a stick in his right hand.

Vansomer "walked" at the funeral, in Westminster Abbey, of Anne of Denmark, Queen of James I.: the accounts of Sir Lionel Cranfield, afterwards Earl of Middlesex, recording an allowance on the occasion of four yards of black cloth to — "Paul Vansomer, picture maker."

I will now mention *two* uncatalogued portraits by this great painter:—Three-quarter of Chief Justice Hobart, at Blickling, in Norfolk (very fine); three-quarter of Lord Abergavenny, at Cassiobury, Herts (fine).

The following catalogue of portraits, painted in England by Vansomer, with the names of the places where they are still to be seen, will be found more ample and accurate than any hitherto compiled. The labour of collecting, comparing, and adjusting minute facts, on which points of importance so frequently turn, can alone be fully understood by those who have made such a study a labour of love.

Male Portraits.

King James I.—Full-length in a black suit, holding the George and Ribbon: at Hampton Court. The head engraved by Vertue. This, to my thinking, is by far the most valuable portrait we have of the king.

The same king.—Full-length, among the sovereigns of Great Britain, in St. George's Hall, Windsor Castle. Same king at National Portrait Gallery.—only the date 1622. Mr. Scharf is a little unfortunate.

Christian IV., King of Denmark.—Full-length, leaning on a stick, at Hampton Court: very fine, and rich in colouring.

Henry, Prince of Wales (died 1612).—Full-length, in rich armour, holding a truncheon.

Henry, Prince of Wales (died 1612), and Robert Devereux, Earl of Essex, the Parliamentary general, about the age of twelve: at Hampton Court.

Charles Prince of Wales (King Charles I.), in coats, as a child, with a hat and feather by him. This is mentioned in Vanderdort's printed catalogue of King Charles's collection.

Lodowick Stuart, Duke of Richmond and Lenox, died 1623.

James Hamilton, Marquis of Hamilton (died 1625). Lord Steward of the Household to James I. —A fine full-length, over the fireplace in the first presence-chamber at Hampton Court. He holds the white staff of office as Lord Steward. Mrs. Jameson (p. 295) ascribes it to Mytens.

William Herbert, Earl of Pembroke, Lord Chamberlain (Shakspeare's Earl).—Full-length, in the Queen's drawing-room, at Windsor.

William Cavendish, 1st Earl of Devonshire.

Henry Wrothesley, Earl of Southampton (Shakspeare's patron).

Charles Howard, Earl of Nottingham (the Armada earl), died 1624; buried with monument at Reigate, in Surrey.

Henry Howard, Earl of Northampton, son of the poet Earl of Surrey.

Thomas Howard, Earl of Arundel, the collector.—Whole-length, at Arundel Castle: engraved for Dallaway's edition of Walpole's Anecdotes.

Thomas Howard, Earl of Suffolk, father of the Sir Thomas Overbury Countess of Essex.

Henry Hastings, Earl of Huntingdon.

Charles Blount, Earl of Newport.

Francis Bacon, Baron Verulam, Viscount St. Alban's, and Lord High Chancellor (died 1626).—Three-quarters, at Gorhambury, Herts. The viper-eyes of the great Lord Chancellor of human nature are intently visible in this picture.

Henry Cary Viscount Falkland and Lord Deputy of Ireland.—Purchased 1842, at the Strawberry-hill sale, for seventy guineas, by John Tollemache, esq., M.P., and now at Pickforton Castle, his seat in Cheshire.

Female Portraits.

At Hampton Court, Anne of Denmark, Queen of James I., with a prospect of the west-end of old St. Paul's.

At Windsor and Combe Abbey, Elizabeth Stuart, Queen of Bohemia.

At Longleat and Welbeck, the Lady Arabella Stuart.

At Longleat, Frances Howard Duchess of Richmond and Lenox, in mourning, with a miniature of the duke, at her breast.

At Arundel Castle, Alathea Talbot, Countess of Arundel, wife of the Arundelian Marble Earl—whole-length and fine: engraved for Dallaway's edition of Walpole's Anecdotes.

In the burial register of St. Paul's, Covent Garden, I found the following entry:—"1683 July 20, Susana, wife of Paul Vansomer."

To which I have to add, that I saw in the hands of the late Mr. John Sheepshanks, the collector and public benefactor, a printed paper of the year 1689, in which "Jo. Vansomer, painter," is—in that year—catalogued as an inhabitant "lodger" in James-street, Westminster.

PETER CUNNINGHAM.

* Harleian MS. in British Museum, No. 7,025.

CHURCH-BUILDING NEWS.

West Retford.—The church of St. Michael, West Retford, has been re-opened after having been restored from designs by Mr. Fowler, of Louth. There is now a north aisle, separated from the nave by an arcade of five bays: it has clustered shafts, with carved capitals and chamfered arches of two orders, with a hood mould on the side facing the nave. In the second bay from the west is a porch, with an acutely pointed moulded arch and high pitched roof. The new chancel stands upon the site of the old one, but with new foundations. In the east gable is a traceried window with three lights, with serpentine shafts internally. On the south side are two windows of two lights each, and, being memorial windows, filled with stained glass by Messrs. J. Hardman & Co., of Birmingham. In the western bay on the north side is an arch of two orders, opening to the organ-chamber and vestry. The interior of the walls of the chancel is faced with red brick, with terra-cotta, embossed tile, and stone bands. The roofs are all new, and of deal. The seats are low and open: those in the chancel are of English oak, enriched with carvings, as are also the prayer-desk and lectern.

Hitchin.—For some years past the want of church accommodation has been much felt at this town. The Rev. George Gainsford, formerly a curate, and now a resident, has offered to build a church at his own expense, on a site in the Dacre-road, about midway between the railway station and the town. The church is to be of mixed style of architecture, with a bell turret. The edifice will be 110 feet long, 44 feet wide, and will contain seats for 400 persons. The seats are to be open,—those in the nave of stained deal, and those in the chancel of oak. The roof will be open, and of stained deal. The brickwork of the walls is to be faced inside; and externally it will be ornamented with bands and diaper work, with Bath stone dressings. The tenders were as under:—Myers, London, 4,250*l.*; King, Shefford, 3,768*l.*; Warren & Son, Hitchin, 3,285*l.*; Butterfield, Hitchin, 2,839*l.* 15s. 1d. Messrs. Butterfield's contract, being the lowest, was accepted.

Marsworth (*Bucks*).—The restoration of the ancient church here, for several years in progress, has been at length completed, and the re-opening services have taken place. The chief feature in the external restoration is the opening of an old door in the south side, which has long been blocked up, with the addition of an ornamental oak porch. The roof of the chancel has been made good, and a new coping and cross have been added. A parclose separates the chancel from the old chapel, which forms a continuation of the south aisle; and oak stalls have been placed in the chancel. The chancel has been paved with encaustic tiles. In the body of the church various improvements have been made. The ancient door leading to the rood-loft has been re-opened. The pulpit has been removed from its former situation to the north side of the church, and placed on a stone pedestal. The font has been removed to the south side, and placed on a new stone base. The seating of the church has been entirely re-arranged, and the aisles have been re-paved with Maw's Broseley tiles. The architect employed in the restoration was Mr. Slater; and the work, including the oak screens, sedilia stalls, and the porch, have been executed by Mr. G. Cooper, builder, Aylesbury.

Cambridge.—All Saints' New Church is progressing. The original estimates have been exceeded by about 350*l.*, and it will require 500*l.* to seat the church. Subscriptions are also required towards an additional fund for completing the tower and spire, &c.

Little Compton.—The new church at Little Compton has been consecrated by the Bishop of Gloucester and Bristol. The old structure had long been in a very dilapidated state, besides being of limited size. In July last the work was commenced, Mr. Bruton, of Oxford, furnishing the design, and the contract being taken by Mr. T. Cowley, builder, Oxford. The greater portion of the cost has been raised, and by the re-use of the old material and other means the expense was brought within the sum of 1,000*l.* The new church extends eastward about 30 feet farther than the old one, the nave being lengthened to that extent, and about 20 inches wider. It now consists of nave, chancel, tower, south aisle, and vestry, and is of fourteenth century character throughout. The south aisle is two bays in length, and has two arches, with stone column and responds, dividing it from the nave, with the increased length of which it corresponds. The roofs are all open timbered, and of high pitch, covered with Staffordshire tiles. The floors of the passages are of tiles, Maw's being used in the chancel, and encaustic tiles in the sanctuary. The whole of the masonry is of local stone. The church is seated with open timber benches, varnished: those in the chancel are of pitch-pine.

Ottershaw.—The Bishop of Winchester has consecrated Christ Church here, designed by Mr. Gilbert Scott, and erected and endowed at the sole expense of Sir Edward Colebrooke, of Ottershaw Park, for the use of the inhabitants of the village of Ottershaw and its adjacent hamlets. The design is Early English, and the material brickwork, with stone facings. The windows are of stained glass. The structure consists of a nave divided into four bays, and an apsidal chancel, and is calculated to accommodate 220 persons. It is fitted with open seats and surmounted by a spire 60 feet high, covered with shingle. The cost of the building will be about 4,000*l.*

West Gorton (*Lancashire*). The foundation-stone of a new church has been laid at West Gorton. The edifice is to be dedicated to St. Mark. The church-work of the district has been mainly kept up by Mr. C. F. Beyer, of Gorton Foundry, whose firm employs a large proportion of the workpeople in the locality. Mr. Beyer has given 1,000*l.* towards the church building fund, and is about to build new schools for 400 children at his own cost. Mr. Robertson, who is a member of the same firm, has given the 1,000*l.* required by law for endowment. The total cost of the church, churchyard, and fittings will probably be between 3,000*l.* and 4,000*l.*, the estimate for the building, irrespective of the approaches, heating, and lighting, being 2,800*l.* The church is to be built of common bricks, with coloured banding and stone dressing; and it will consist of a nave, 65 feet 7 inches by 24 feet 2 inches; north and south aisles, each 67 feet 7 inches by 13 feet 9 inches; and chancel, 21 feet by 19 feet 2 inches. There will be a western porch and door, and a north door projecting slightly from the wall. The building will be in the later Early English style. The building will accommodate 510 persons; and 260 seats will be free. The architect is Mr. Holden, of Manchester. The builder is Mr. R. M. Neill, of Manchester.

Harrogate.—The new cemetery here is nearly completed. It is reached from High Harrogate by a new road which diverges from the high road a little below the Dragon Hotel, and runs past the cemetery gates into Baker-lane, which forms the approach from Low Harrogate. The cemetery is entered through a pair of low iron gates which, together with the adjoining piers and railings, are of simple design. At the right hand side, within a few yards of the entrance, is placed the lodge, constructed of stone with high pointed roofs covered with slate. The cemetery covers an area of about four acres, and is divided into two nearly equal parts by a broad central carriage drive as far as the chapels. The western half is set apart for the interment of members of the Church of England, the remainder for Non-conformists. The chapels, which are identical in plan design, and with the exception of the cross on the gables of the Episcopal chapel, are placed on either side of the avenue fifteen yards apart, at a distance of fifty yards from the entrance gates. A dwarf stone wall, railing, and ornamental piers serve to group together the two buildings, and to terminate the central carriage drive and relieve an otherwise formal straight line of path. The Episcopal chapel, on the right, is entered through a moulded doorway with cusped head enriched with carving, giving access through the porch to the chapel and vestry. The chapels are placed north and south. The porch occupies the lower part of the north gable: the tower, the ground-floor of which is the vestry, forms the western side of the porch. Internally the chapel is 33 feet long by 19 feet wide, with a plain open timber roof plastered between the rafters, the timber being stained dark oak and the plaster a French gray. Three small two-light windows on either side, and a slight traceried window at the south end, give the chapels a more cheerful appearance, rather than the general charnel-house effect. The material of the chapels is Birk Crag stone, roughly dressed. When plans and estimates for the buildings were advertised for and premiums of 20*l.* and 15*l.* offered as first and second prizes to be awarded to the two best designs, upwards of forty were sent in, and finally the first prize was awarded to Mr. T. C. Sorby, of London, who was appointed to carry out his design; and the second prize to Messrs. Bellamy & Co., of Lincoln. The contractors were,—Masons, Messrs. Wood, Brothers, of Pickering; joiner, Mr. H. Horner, High Harrogate; plasterer, Mr. R. Fortune, High Harrogate; plumber, Mr. J. H. Place, Low Harrogate; ironwork, Mr. James England, Low Harrogate. The total cost of the two chapels and the lodge, including boundary walls and entrance gates, will be about 4,000*l.* An estate at Ripon has recently been laid out by the same architect, whose design for the general arrangements and for suitable houses to be erected thereon, was selected out of a considerable number, submitted in public competition by some of the principal surveyors and architects of the county.

Rainton (*Durhamshire*). The new church of St. Mary, Rainton, has been consecrated by the Bishop of Durham. This church, which replaces one of a very mean and debased character, has been built under the direction of Mr. E. R. Robson, of Durham, and contains accommodation for 500 persons. The whole of the seats are free and unappropriated. Owing to the want of funds, the tower has not yet been added. The edifice consists of nave, aisles, chancel, organ-chamber, vestry, &c. The aisles are remarkably low, while the clerestory and chancel are very lofty, a treatment which conceals the unavoidable shortness of the church. The style is an early and severe form of Decorated Gothic. The cost has been 2,300*l.*

DISSENTING CHURCH-BUILDING NEWS.

Melbourne. The new Jerusalem Church is now completed. It is situate in the Derby-road. The style adopted is Gothic. The gable end is placed back about 12 feet from the street, and is of stone, flanked with buttresses, and having in the centre a large four-light equilateral window, filled with tracery, and above is a trefoil ventilation opening; the whole surmounted with an ornamental finial and apex stone. The floor of the chapel is upwards of 5 feet higher than the level of the adjoining street, and the entrance at the side is approached through an iron gate, hung to stone pillars, with moulded Gothic heads, the latter to be surmounted with ornamented lamps. The chapel is 50 feet by 25 feet, and rises to a height of 30 feet to the square, and 63 feet from the floor to the top of the roof. The latter is open-timbered, with arched ribs springing from moulded stone corbels. The spandrels are filled in with light ornamental ironwork, and varnished. The ironwork in the roof is picked out with bright blue, relieved with gold. The seats are open-framed. The building will be lighted by ornamental coronas, suspended from the ribs of the roof, and coloured blue and gold. The whole has been designed by Mr. B. Wilson, of Derby, and erected by the contractors, Messrs. Bullock & Barton, of Melbourne.

Nottingham.—The foundation-stone of a new chapel and schools in connexion with the Wesleyan Methodists worshipping in Halifax-place Chapel has been laid. The building is situate in Arkwright-street, Nottingham, a large and rapidly-increasing district. The cost is being wholly defrayed by voluntary contribution. The building will comprise a chapel to seat 700, and school-rooms, with class-rooms in connexion, for 500 children. Vestry accommodation will be provided behind the chapel. The style of the building will be Gothic. The chapel, having galleries, is regarded as a two-story building, and there will be, accordingly, upper and lower windows. The internal length of the chapel (exclusive of the orchestra, which will be provided behind the pulpit) is 70 feet, and the width 41 feet. The roof will be in span, and ceiled at the level of the collar-beams, which, together with the principals, will be exposed. The cost of the whole of the buildings (not including the site) and work in connexion will probably be about 2,500*l.* Mr. T. H. Lomas, of this town, is the architect; and Mr. William Ellis the contractor. Mr. Slim contracted for the brickwork.

Hull.—The Primitive Methodist Jubilee Chapel here has been opened. The dimensions of the edifice are,—length, 79 feet; breadth, 50 feet 6 inches; Spring-bank front, 90 feet. Seat room has been provided for 1,030 persons. The exterior of the building is for the most part in the Italian style. At the east and west corner of the principal façade there are towers which are carried to a few feet above the rest of the build-

ing, and serve for staircases to galleries, and also for ventilation. They are surmounted by cast-iron cresting and finials. The principal portion of the building is of red and white brick, with a large admixture of stonework in the south front, and at the east and west corners. On the floor, which is level with the chapel, there is a preacher's vestry, committee-room, and a steward's-room. On the basement floor there is a large school-room, 50 feet by 30 feet, besides an infant school-room, seven class-rooms, kitchen, and boiler-house. The galleries are supported by nine light cast-iron columns, with Corinthian capitals. These will be decorated in white and gold. The front af the gallery is in iron scroll-work panels. The entire front is white enamel, backed by a scarlet ground. The pulpit or platform is supported on two fluted cast-iron columns, with Corinthian capitals, and is surrounded by a cast-iron balustrade, with mahogany rail. The chapel will be heated by hot-water apparatus, which has been fixed by Messrs. Longbottom, of Leeds. Mr. Wright has been the architect; Mr. R. Bailey, the contractor for the excavations, bricklaying, and plastering. The carpenter's, joiner's, plumber's, glazier's, and painter's work has been done by Mr. A. Stamp, of Barton; and Messrs. Wallis & Tadman have had the carrying out of the stonework. The gas-fitting has been done by Messrs. Stones, Settle, & Wilkinson. The new building it is estimated will cost about 5,000*l.*, and between 1,000*l.* and 2,000*l.* have been raised.

FROM SCOTLAND.

Edinburgh.—A large company recently assembled at the foundry of Mr. John Steell R.S.A., her Majesty's Sculptor for Scotland, to witness the casting of the bronze statue of Professor John Wilson, which is to be placed in East Princes'-street Gardens. The operation was completely successful. The height of the statue, which has been cast in two pieces, is 11 feet 6 inches, and it weighs 5 tons 6 cwt.——A proposal, which has often been mooted, to establish in Edinburgh a College-hall in connexion with the University, is now made in practical form. A joint-stock company, on the limited liability principle, has been formed, and shares to the amount of 7,600*l.* subscribed in furtherance of the undertaking. The document says:—"The accommodation contemplated, in the first instance, comprises a common dining-hall for students in general, bed-rooms for from fifty to sixty students, a library for resident students, reading-rooms common to several, and separate sitting-rooms for those who may desire them." It is not proposed to imitate, in every particular, the collegiate arrangements and discipline of the English universities. Mr. Stirling, of Keir, M.P., is chairman, and the council of the company is composed of influential gentlemen, professors, and others. The sum required to carry out their plans is estimated at 15,000*l.*

Gilmerton (near Edinburgh).—A clock has been supplied by Mr. Benson to Miss H. Kinloch, of Gilmerton, East Lothian, for schools at that place. The clock shows time on a dial 2 feet 6 inches diameter, and strikes on a bell weighing 56 lb.

Munraw (Haddingtonshire).—In making alterations on a mansion here which was a nunnery in the Middle Ages, a painted Mediæval ceiling has been discovered. There are innumerable figures, but the most prominent are armorial bearings of the monarchs who flourished at the time. The apartment measures 30 feet by 18, and is 16 feet in height. The side-wall of the old refectory still also bears traces of paintings.

Kelso.—The foundation stone of the new Mansion-house of Stickill has been laid by a son of Mr. Baird, the proprietor, in presence of the Duchess of Roxburgh and other local celebrities. The masons and labourers, nearly 100 in number, were afterwards provided with a substantial dinner in a tent fronting the house.

Galloway.—We learn that the granite needed for embanking the north side of the Thames, first section, has been contracted for by the lessees of the granite quarries of Kirkconnell, and of Old Lands, on the Urr. The quantity of stone required is immense; and, whilst the demand for it will develop the resources of the recently-discovered quarry at Kirkconnell, the River Nith Commissioners will share in the benefit, as the whole of the granite taken from that quarry will be sent to London by sea.

Cowpar-Angus.—The estimates for a new United Presbyterian church have now been settled, the following being the successful competitors:—Mr. T. Reid for the mason work; Mr. R. Reid, Blairgowrie, for the wright work; Messrs. M'Ritchie & Donaldson, for the plaster work; Mr. Templeman, Blairgowrie, for the plumber work; and Messrs. A. Butter & Son, for the slater work.

Stirling.—Excavations are now being made at Cambuskenneth Abbey, under the inspection of the provost and magistrates of Stirling and the Royal Society of Scottish Antiquaries. The foundations of what must have been an extensive edifice have been already exposed. A slab of black mountain marble stands in a slanting position before what formed the high altar. Broken shafts or pillars of freestone and parts of capitals finely cut, as well as portions of stained glass, interesting to the antiquary, have also been found. The building must have covered nearly two acres of ground.

Dundee.—The Caird Fountain Committee have requested the Corporation to grant a site for the fountain at the Old Tron, in the High-street, opposite Crichton-street; but as an interdict had been obtained against the erection of the fountain in the High-street, the matter was referred to the Property Committee. Mr. Caird is only willing to give the fountain on condition of its erection on the site applied for, and refuses to allow the Corporation to erect it elsewhere.

Perth.—The viaduct over the Tay at Perth, in connexion with the Dundee Branch of the Scottish Central Railway, has been opened for general traffic. The strength of the structure was tested by an engine and tender, weighing together nearly 56 tons, being run over it at the rate of twenty miles an hour. The cost will be upwards of 28,000*l.*, including the removal of the old timber bridge.

PROVINCIAL NEWS.

Wolverton.—The new Science and Art Institute has been opened at Wolverton with great ceremony. Three years since the foundation stone was laid by the Duke of Sutherland, who would also have been present at the opening had it not been for his absence from England with Garibaldi. The new building was erected by Mr. Dunkley, of Blisworth, from the plan of Mr. G. E. Street, of London. The rooms in it are, an exhibition and lecture hall, 60 feet by 39 feet; an elementary room, 39 feet by 30 feet; a reading-room, 34 feet by 16 feet; a library, 34 feet by 16 feet; two class-rooms, 24 feet by 16 feet; a modelling-room, head master's rooms, committee rooms, &c., &c. The principal room (the exhibition room) has an open timbered roof, the tie-rods of which, with all the other wrought-iron, has been supplied by Mr. Roberts, of Northampton, ironfounder. The walls of the room are of uncovered brickwork, the bricks of the commonest and most unfinished kind. The cost of the building has been between 2,500*l.* and 3,000*l.*, the amount having been principally raised by the workmen themselves. The contractor was Mr. Dunkley; foreman, Mr. Thomas Martin. Mr. C. Aveline was clerk of the works.

Bath.—The foundation-stone of the new Militia stores has been laid. The stores are for the 2nd regiment of Somerset Militia, and are now in course of erection in a field adjoining the cemetery, in the Lower Bristol-road. The new structure has a frontage of 236 feet, and stands on a raised terrace. The centre part, which projects, and is raised much higher than the wings, is devoted entirely to the stores. The style of the elevation will be Italian Romanesque. The architect is Mr. C. J. Phipps. The contractors are Messrs. Bladwell & Ambrose. Clerk of works, Mr. J. Grant.

Liverpool.—The Raffles Memorial Mission-room, Greenland-street, has been opened. The rooms are to be used as ragged schools, workingmen's hall, preaching-room, &c. The ground floor is principally devoted to a large school-room and class-room,—the latter, on Sunday, being filled by upwards of 540 children. The dimensions of the school-room are 70 feet by 45 feet. The middle or second story is divided into a workmen's hall (52 feet by 45 feet) and two smaller rooms. The latter are intended for the convenience of those who wish to possess more quiet and retirement than that afforded by the hall, which is furnished with a bagatelle-table. Arrangements are being made for the introduction of harmless games. The walls are embellished with maps and engravings. Immediately in the rear is another room in which it is intended mothers' meetings will be held and winter lectures delivered. The lecture-hall is furnished with a piano. The next or upper story is chiefly taken up with what is termed a preaching-room, the dimensions being 70 feet by 45 feet, and sufficient to seat 700 people. The committee-rooms are attached; and semi-detached are the keeper's apartments. The edifice is situate about midway in Greenland-street. Mr. W. J. Mason was the architect, and Mr. Thomas the contractor. The total expenses incurred in the erection of the rooms amounted to 5,000*l.*, 3,000*l.* of which have already been subscribed.——At a recent meeting of the Markets Committee the surveyor submitted a long report and plans on the proposed alterations of St. John's Market—namely, the erection of shops at each end, and the replacing of the present roof with one of a lighter character. The total expenditure was estimated at 16,200*l.* The adoption of the report and plans was agreed to. The report of the surveyor on the wholesale market scheme was also read. It is proposed to remove all the buildings between Queen-square and Williamson-square, bounded by Murray-street and Roe-street on the east, and by Marble-street and Hood-street on the west, with the exception of the shops and publichouses on the north-west side of Roe-street, facing the north end of the market; and, with the exception of the Weights and Measures Offices in Hood-street and Murray-street, using the area thus obtained as a wholesale market. This area will be 8,000 yards. This scheme would afford an opportunity to widen Murray-street, at present inconveniently narrow, although one of the principal thoroughfares from the southward and westward to the markets, the assize courts, and the London and North-Western Railway: the street would be made 16 yards wide. It is also proposed to widen Marble-street and Hood-street, the portion of which between Marble-street and Roe-street being made also 16 yards wide, forming an improved access to that extent between the north-eastern portion of the borough and the intended new public offices. The total cost is estimated at 53,300*l.* The approval of the plans and a recommendation for their adoption to the Council, were unanimously agreed to.

Hereford.—The Archdeacon of Hereford (Lord Say and Sele), who a few years ago restored the basement of the ancient monument erected by the second of the two Bishops Charlton, *temp.* Edward III., known as the White Cross, one mile west of this city, on the Hay-road, is about to supplement that good work, according to the local *Times*, by a complete restoration of the shaft and cross. Mr. Scott has been entrusted with the work. It is said that there are sufficient remains to determine the form and character of the original cross. Mr. Arkwright, of Hampton Court, is also, we understand, about to undertake the restoration of the Preaching Cross (also *temp.* Edward III.) at the Blackfriars Monastery, in Widemarsh-street, to the decayed condition of which attention has been frequently called.

LOCAL AND GENERAL ACTS.

BRISTOL.

MORGAN *v.* POPE.—This was one of those cases which are now constantly occurring, in which there is a complication, if not a conflict of law, created by the many Acts passed of late for the general regulation of various objects of local improvement or government, in connexion with the previously existing local Acts passed for similar purposes. The present case came by appeal from Bristol, and involved an apparent confusion or conflict between the local Building and Improvement Acts of that city, the Public Health Act (1847), extended to the city by order in council in 1851, and the Local Government Act (1858), which also applied to the city. The matter arose thus: The appellant, Morgan, a builder in Bristol, had erected a house, without paying to the district surveyor, Mr. Pope, the fee of three guineas, to which he claimed to be entitled, under the local Acts, by which the town council were empowered to appoint such functionaries. They had appointed Mr. Pope as one of the district surveyors, and had done so in the usual way—by resolution, entered in the books of the council. The surveyor summoned the builder before the magistrates for non-payment of the fee; and the latter disputed the validity of the appointment—as not being under the seal of the corporation—and also the application of the provisions as to fees, &c.; contending that, though the local Acts were not expressly repealed by the general Acts, they were virtually displaced by provisions of a similar character in those general Acts which ought to do away with the provisions of merely local Acts. The magistrates, however, thought otherwise; and it was admitted that, if the local Acts were still in force, there was nothing in either point.

Mr. Karslake, Q.C., argued that they were in force.

Mr. Coleridge, Q.C. (with him Mr. Prideaux), argued that they were not.

The Court were clear that they were, and so gave judgment in favour of the surveyor.

PROGRESS AT BRISBANE, IN EASTERN AUSTRALIA.

THE principal event of importance, in connexion with the public works of Queensland, by last despatches, of date 18th March last, was the cutting of the first sod of the Southern and Western Railway, which ceremony was performed by Lady Bowen, at Ipswich, on the 25th of February. There were about 3,500 persons present, who came from all directions within an area of 150 miles to take part in the demonstration. The work has since been proceeded with, the contractors, Messrs. Peto, Brassey, & Betts, having imported a number of navvies, who are making rapid progress. Mr. Fitzgibbon, the Government Engineer, states according to the *Brisbane Courier*, that at the end of fifteen months from the day on which the first sod was cut, the first railway train will run in Queensland.

In Brisbane, building operations are still increasing, and every portion of the town is being improved. In Queen-street, low ill-constructed little wooden buildings are rapidly being converted into large, commodious, and shapely shops and stores; and in the suburbs, works of a similar nature are going on. The town-hall has been commenced, and the tender of the same contractor has been accepted for building the bridge. The foundation of a Roman Catholic Cathedral is nearly finished by the contractor, Mr. Teevan. A quarantine station and hospital have been erected, and a new school of art and a temperance hall are spoken of. Roads still form an important item of works in progress.

Among works throughout the colony in progress under charge of the colonial architect are military barracks at Brisbane, contractor Mr. R. Hope; cost 6,820*l.*;—a lunatic asylum at Woogaroo, nearly completed;—a jail at Toowoomba, well forward, and another at Rockhampton now finished; also a lock-up at Mackay, in course of erection, along with others in various parts of the colony. A design has been prepared for a new hospital at Brisbane to accommodate 400 patients.

The competition designs for the new Houses of Parliament were to be sent in by the end of March.

THE BUILDERS' BENEVOLENT INSTITUTION.

ELECTION OF PENSIONERS.

A GENERAL MEETING of the subscribers to this Institution was held on Tuesday, the 26th ult., at the London Tavern, for the purpose of electing five pensioners on the funds,—three males and two females,—from a list of nine candidates. Mr. Alderman James C. Lawrence (president) occupied the chair.

The Chairman, in commencing the proceedings, said the meeting was aware that this Institution was one of a very peculiar character, it being established for the purpose of giving relief and granting pensions to all the various branches of the building trade; and further, for affording temporary relief to workmen in cases of accident to which the trade was liable. He found the number of pensioners, including those to be elected on that occasion, would be thirty-four,—sixteen males and eighteen females. The amount of stock in the Three per Cent. Consols was 9,370*l.* 5s. 10d.; 6,930*l.* 15s. 2d. for the relief fund; and 2,439*l.* 10s. 8d. for the building fund. By the last report of the treasurer, there was a balance at the bankers' of 546*l.* 11s., part of which would be funded this month. The last published report, ending July, 1863, showed an increase of annual subscriptions amounting to 49*l.* 17s. 6d., and donations, 45*l.* 13s. 6d. That would show they were progressing, but there was still much to be done. They, however, confidently looked forward to a further increase of their means of doing good, seeing that there were still a large number of persons engaged as builders, and the trades connected with them, who had not yet subscribed, but who, they hoped, would, when applied to for their support, perceive the necessity of aiding a charity which relieves and soothes the declining years of those who have not been so prosperous as themselves in a business which perhaps was more frequently subject to losses and fluctuations than any other. The object of this charity was to relieve those who were no longer able to sustain their positions, and who had perhaps outlived their friends, and were left destitute and helpless. By its means, and the generosity of its supporters, many very industrious but decayed and aged tradesmen had been enabled to end their days contented. In November next there would be another election, and there was every confident hope that the unfortunates at the present time would then receive the return of their anxious desire.

The poll was then declared open; and during the contest the candidates were supplied with a substantial dinner provided by the Institution.

On the return of the scrutineers, the following were announced as being successful: W. H. Walsham, aged 69, bricklayer, &c. (suffering from old age and losses in business); John Jenkins, aged 68, builder, &c. (loss of business and an accident); Robert Longstaff, Lincolnshire, aged 74, plumber, &c. (losses, and infirmity of age). The females were Sarah Clements and Elizabeth Efford, the husband of each having been on the funds of the Institution.

Mr. Joseph Bird said a great number of votes had been unrecorded; but, notwithstanding, the total far exceeded that of any former occasion. He proposed a vote of thanks to the scrutineers, whose labours had been so quickly and correctly performed.

Mr. Thorne replied, and said, he and his brother scrutineer now so well understood the business that it was with much pleasure they performed the duty, no matter how extensive might be the number of the votes to go over.

The successful candidates then returned thanks, through Mr. Bird; and, after the usual compliment to the chairmain, the proceedings terminated.

THE DWELLINGS OF THE WORKING CLASSES.

ON the first meeting of the conference invited by the Society of Arts, the following resolutions were passed:

"That in the opinion of the meeting there is at present in town and country a very insufficient number of dwellings for the labouring classes, and that the accommodation is bad and unsuitable for the classes who occupy them."

"That the evil effects arising from this state of things in a religious, moral, social, sanitary, and economic point of view, in the opinion of this meeting, demand the instant and serious attention of the country."

"That in the opinion of this meeting, the present lamentable state of the dwellings of the labouring classes is materially induced by the law of settlement and the limited area of Poor-law rating."

"That the tenure of property and the legal difficulties attending its transfer, and the obstacles they interpose in obtaining sites, impede the labouring classes from becoming possessors of suitable dwellings, either separately or as portions of detached buildings."

"That by proper attention to economy, by building to the extent only required by each district, and by the utmost care in avoiding unnecessary outlay in preliminary expenses, proper dwellings for the labouring classes can be provided which will realize in towns a fair dividend on the capital expended; and that although in rural districts, commonly speaking, the pecuniary return for capital invested in labourers' dwellings, considering the rates of their wages and their general circumstances, and the cost of repairs, can only be moderate, yet it may be regarded as satisfactory when the consequent improvement of the character of the occupants, their comfort, their health, and the additional value of their labour are taken into account."

On the second day the following comprehensive resolution was come to at the close of it:—

"That the Legislature can promote the erection of proper and sufficient dwellings for the labouring classes. 1. By loans at a low rate of interest, repayable within a limited time and under proper security and conditions, for building dwellings and cottages upon the precedent of the Dwellings of Labouring Classes (Ireland) Act, 1860, 23 Vic., c. 19, and other similar Acts of the Legislature. 2. By assimilating the law of this country with that of Ireland and Scotland (Tenure and Improvement of Land (Ireland) Act, 1860, 23 & 24 Vic., c. 153), (Act for Facilitating the Building of Labourers' Cottages, 1860), and giving facilities for obtaining advances on the securities of settled estates. 3. By throwing upon public companies requiring houses inhabited by the working classes for their own commercial purposes the obligation of erecting an equal number to those destroyed. 4. Improvement of the Lodging-house Act as regards provision for sanitary purposes, and giving greater power to inspecting officers. 5. By giving facilities to owners of property under disabilities (such as tenants for life, minors, &c.), for conveying sites for building cottages upon the principle of the Montgomery Act in Scotland (10 George III., cap. 31), and the Tenure and Improvement of Land in Ireland Act (23 & 24 Vic., c. 153). 6. By cheapening the cost of title and transfer of property, as far as respects cottage property. 7. By enabling cottage property and labourers' houses in towns, and the sites of such property, to be registered, under local authorities, as personal property transferable in the local registry alone, in the same manner as Government stocks and railway shares. 8. By abolishing the law of settlement and extending the present limited area of assessment for local taxation, so as to equalize the payments of all classes."

It was further resolved, that the council be requested to take such steps as might appear desirable, in accordance with the former resolutions.

Mr. W. Hawes presided on both occasions, and the discussion, which was opened by Mr. Godwin, was vigorously sustained by Mr. Lowe, the Rev. L. Tugwell, Mr. White, the Rev. Thomas Pyne, Mr. Westgarth, Mr. Hare, Mr. Bodkin (Assistant-Judge), Mr. Whalley, M.P., Lord Berners, Lord Lyttelton, Sir C. Rawlinson, Mr. Murphy, Mr. Maynard, Mr. Hickson, Mr. Kime, the Rev. Mr. Moss, Mr. Gregson, Mr. Sparke, the Rev. Harvey Brooks, Mr. Redgrave, the Rev. J. B. Owen, Mr. E. Ackroyd, Mr. Marsh, Mr. Harrold, Mr. Goldsmid, Alderman Waterlow, Mr. Bowkett, the Rev. Mr. Robinson, Mr. Hoskyns, Mr. Brooke, Mr. Dillon, Mr. Ireland, Rev. Mr. Thorold, Dr. Greenhill, Mr. Mortimer, Mr. Gatliff, &c.

ST. MARTIN'S SCHOOL OF ART.

THE eighth annual *conversazione* of this school was held on the evening of the 19th of May in Castle-street, Long Acre. Lord Elcho, M.P. presided. The room, which was decorated by the ladies of the committee, was further adorned by various works of art,—an exhibition of the students' drawings.

The proceedings commenced by the distribution of prizes and medals to the successful students; after which an appropriate address was delivered by the chairman.

The next feature of the evening was the presentation of a testimonial, consisting of a bronze statuette, to the late assistant master, Mr. E. T. Burchett,—which having been accepted by him, and votes of thanks passed to the present masters, and acknowledged by Mr. W. L. Carey and Mr. Stopford, the evening concluded with a vocal and instrumental performance by the students of the school.

THE ARCHITECTURAL MUSEUM.

THE Council have issued a report of their proceedings, with most of which our readers are acquainted. We quote the following passages:—

"The President's lecture was published by request, and circulated among the subscribers and friends of the Architectural Museum.*

The cause of the Art-workman, to which it referred, was again taken up by the president in his evidence before the commission appointed by Her Majesty to inquire and report to both Houses of Parliament respecting the present position of the Royal Academy in relation to the Fine Arts, and it is the pleasing duty of the Council of the Architectural Museum to announce that the suggestions thrown out by their president have been mainly adopted by the Commission in their report, in the following terms:—

'We also recognise great value in the suggestion first made to us in the evidence of Mr. A. J. Beresford Hope, that there should be a class of art-workmen connected with the Royal Academy. Looking at the intimate connexion between the fine arts and those of a more mechanical character, and the great importance of extending the influence of the former over the latter, we think that workmen of great excellence in metal, stone, wood, and other materials might be properly distinguished by some medal or certificate of honour conferred by the Royal Academy, and in certain special cases become members of the Academy, at least as associates: each of these art-workmen might properly receive a bronze medal, and the appellation of "Royal Academy Medallist."'

This acknowledgment of the Art-workman's value and importance by such a commission is a signal mark of success. It is not too much to say that it is mainly owing to the efforts of the Museum in behalf of that gifted though humbler class of artists, and to the teaching it has provided for them.

The Council have already made known, by the published correspondence on the subject, their opinions as to the formation of a National Museum of Architecture, of which their own collection forms the nucleus. Although a more central position for such a museum might have been desirable, the counterbalancing advantages of South Kensington should be borne in mind. The Government art collections which it contains, and which are every day growing more extensive, and of greater value to architectural and other art-students, afford materials for study in connexion with the simpler models of the Architectural Museum, whose sterling value is independent of the question of site, while the presence of our own unrivalled collection makes the advantage reciprocal. The casts, with the exception of a few of the heavier objects, have been provisionally arranged in the ground-floor of the South Kensington Museum, underneath the west gallery, and also along the spacious and well-lighted corridors leading therefrom to the

* This and Cardinal Wiseman's lecture are published by Mr. Murray, and may be obtained by the public.—ED.

extreme west entrance opposite the Exhibition building of 1862.

At the southern end of the space under the west gallery will be found that curious and interesting collection of Hindoo sculptures, presented by Sir Bartle Frere, and referred to in more than one of the Council's reports. At the western end of the corridor are displayed the larger casts of the collection of Perpendicular work, formed by the late Sir Charles Barry for the guidance of the workmen at the Houses of Parliament.

The casts belonging to the Architectural Museum will need cataloguing afresh. For this purpose arrangements will be made, and also for placing a descriptive label on each cast or set of casts."

The Council of the Architectural Museum having been invited by the Royal Institute of British Architects to select four of their members as representatives of the Museum on the general committee formed to take into consideration the subject of architectural education, Mr. Beresford Hope, Mr. Ruskin, Mr. Ferrey, and Mr. Joseph Clarke have been nominated.

THE ARCHITECTURAL ASSOCIATION.

THE ordinary meeting of members was held on Friday, the 27th ult., at the House, in Conduit-street.

The chair was taken by the president, Mr. Roger Smith.

Mr. W. G. Wallis, 139, St. George's-road, Holloway, was, on ballot, elected a member of the Association.

The chairman announced that, on Saturday, the 5th of June, the members would be enabled to pay a visit to the bank buildings now in course of construction for Messrs. Barclay, Bevan, & Co., of Lombard-street.

Mr. J. D. Mathews (honorary secretary) read a letter from the secretary of the Society of Arts, announcing the result of the judges' award for the best drawings, &c., for the Denton prize for dwellings for the labouring classes, and stating that the designs were now on view at the rooms of the Society of Arts.

The chairman observed, in reference to the award, that certain members of the Association who had sent in designs, being of opinion that, as the judges had given the prize to an exhibitor (No. 23) who had not strictly complied with the conditions which were to regulate the competition, they had remonstrated with the Society of Arts, setting forth that, in their opinion, the designs submitted by them were quite as worthy of consideration as that to which the judges had awarded the prize. He requested that the letter might be read.

Mr. L. N. Ridge read the letter in question, which asked for certain details in reference to the cost, &c., of the proposed cottages, and contained a request on behalf of the signatories that the subject might be reconsidered.

The chairman said that the Patent Concrete Stone Company had offered for competition among the members of the Association four prizes of the value of 21*l.*, to be divided into one of 10*l.* 10s., one of 5*l.* 5s., and two of 2*l.* 12s. 6d. respectively, for the most approved sets of designs for portions of buildings, or accessories to buildings, suitable for execution in their patent concrete stone. The drawings were to be delivered by the 1st of July next, and the judges were to consist of three members of the Association not competitors, to be nominated by the committee of the Association, and three gentlemen to be nominated by the company; and the judges, equally with the competitors, were to be bound by these conditions. The chief points to be regarded by the competitors were to be novelty of design and application, artistic merit, and suitability to the properties of the material. The designs after the award to become the absolute property of the company.

Mr. Thomas Piper, the secretary to the Patent Concrete Stone Company, explained the properties of the material used by them, and stated that, although the primary object of the company in offering the prizes was one of self-interest, still they hoped some impetus might be given to the art of design by the proposal which they had made.

In reply to a question, Mr. Piper said, that in case of "a tie" between the judges as to the relative merit of any design, the company would be satisfied to leave the point in dispute to the decision of Professor Donaldson.

The chairman recommended the class of design especially to consider the subject, as now-a-days detail appeared to be more considered in architecture than design.

Mr. Penfold being unable to read his paper on "Metropolitan Improvements,"

Some short discussion ensued, and at the conclusion it was announced that the next subject for the class of design would be a boat-house, and that on the 10th instant the members would be invited to nominate their president and office bearers for the session of 1864-5.

The delegates appointed by the Association as their representatives at the Committee on Art Education are, Mr. J. H. Christian, Mr. Blashill, Mr. R. M. Ede, and Mr. J. D. Mathews (Hon. Secretary).

VOTES FOR BUILDINGS AND DESIGNS.

New Foreign Office.—On the sum necessary for completing the vote of 75,000*l.* for the new Foreign Office, Mr. Augustus Smith complained of the enormous cost of the new building, and called attention to the item of 4,899*l.* for preliminary expenses of designs which were not adopted. He found, when he added this item to the sums of a similar nature voted in previous years, that upwards of 10,000*l.* had been paid for designs not used. He moved the omission of the item. Mr. Cowper said, the estimate of 200,000*l.* for the new Foreign-office was based upon the original tenders made in 1860. Since that time the price of labour and materials had risen about 10 per cent., and now the amended estimate for the work was 228,415*l.* He reminded the committee, that in July, 1861, he stated that the Government could not bind themselves to the estimate of 200,000*l.* The item of 4,899*l.* was made up of various sums paid for drawings and plans. First, there was a sum of 500*l.* due to Mr. Scott, for work done between November, 1858, and March, 1859; next, there was a further sum of 2,000*l.* payable to Mr. Scott, for working drawings and specifications for tenders, in 1859; then, the model exhibited to members of the House cost 300*l.*, and 1,500*l.* were paid to surveyors for preparing bills of quantities. The vote was agreed to.

Architectural Designs.—On the vote of 3,260*l.* for architectural designs and estimates of public buildings, questions were asked, and Mr. Cowper said, the present vote was confined entirely to the claims of Mr. Pennethorne, which were not sent in until the question of the Foreign-office was finally decided, because Mr. Pennethorne was not sure until then that he would not be employed himself. Mr. Kinnaird asked whether Mr. Pennethorne was not a permanent servant of some department, and whether his whole time was at its service. Mr. Cowper said that under the present arrangement Mr. Pennethorne had a salary of 1,500*l.* a year as surveyor and architectural adviser to the Board of Works. In both these capacities he had rendered great services to the department, for which he would have received a larger remuneration had he been paid in the ordinary way. With respect to plans for new buildings, Mr. Pennethorne was in the position of any other architect, and entitled to his commission.

The Exhibition Building.—A vote of 53,000*l.* to complete the purchase of the land occupied by the exhibition building, and of the arcades which were used as refreshment-rooms, was agreed to.

THE PATENT ENDLESS LADDER.

IN one of your earlier numbers you gave a description of my patent endless ladder as applicable to building purposes.

The Messrs. Cubitt adopted it simply on permission, without any pecuniary consideration: by its help they raised many of their most notable structures and loftiest in this metropolis.

Mr. W. Cubitt, nevertheless, dissuaded me from renewing the patent on the ground of its success, referring more to the ease of the labourer, and the quietness and safety of his labour, than to any pecuniary advantage that could devolve to me as the patentee. Notwithstanding my sacrifice of several hundred pounds, I suffered the invention to pass away from patent protection into beneficial chances for the public, content to be a benefactor thereto to some extent.

This boon has, however, been subsequently intercepted by a private party taking out a fresh patent for the very same idea and plan, differing in no solid or positive respect, that I can discover, from the specification which was the ground whereon my patent was legally conceded.

What the new ground was which induced the authorities, to whom the law of patent rights is entrusted, to grant a new patent upon the prior basis of their own sanctioning, I cannot imagine.

To my eye, it would have been a generous proceeding on the part of the new patentee to have apprised me of his purpose. As matters stand, he is reaping a harvest from the costly seed of my sowing; and in this consists the unjust operation of our Patent Laws, to say nothing of their suffering the originator of a useful invention to be a loser, in common with the public, by the step he has supplied towards the gains of the imitator who succeeds him.

JOHN STURGIN.

Great Cumberland-street.

SHAMS.

SIR,—I was much surprised, on reading your last impression, at seeing "Art Lover" openly announcing his predilections for shams. I did not know before that "Art Lover" was a lover of art in its sense of fraud and deceit. But such it seems to be; and he has thrown down the glove to all your readers. And this is all,—a bare assertion, and no supporting arguments. He says one thing, which, as he thinks, will be disputed by no one; namely, "that good—nay, even very superior—taste may be shown, be the means employed for exhibiting it ever so cheap." Of course, no one would ever dream of denying this. But then comes the assertion, that we should not object to "innocent licences, such as graining and other deceptions," if the general effect is pleasing or captivating. We are to do evil that good may come. Art must be very circumscribed indeed, if all it can afford is either costly, or imitation of what is costly. Does "Art Lover" deny that good effects can be produced without apparent expense? It would be a pity indeed if a door could be decorated in no other way than by imitative graining; and there are other alternatives than "smearing it over with one uniform coat of paint."

But, having accepted "Art Lover's" challenge, I will say no more, but will leave him to bring forward some proofs to support his case.

EX STIRPE.

OUR STATUES AND STREETS.

WILL you allow me to call the attention of those whom it may concern, to the disgraceful, dirty condition of the Queen's statue, in the quadrangle of the Royal Exchange. The face looks as if a tar-brush had been passed over it, and both eyes are of an unmistakable jet black. It appears very strange that day after day the "merchant princes" assemble under the very shadow of this statue, and yet do not try to remedy this blot upon their loyalty. Surely times are not so bad but that a few pounds might be expended occasionally in cleaning with soap and water the profile of the "beloved of her people." What must foreign visitors think of our loyalty, let alone our want of taste? Why not have a few hardy plants, in tubs, placed around the base of the statue—during the summer months especially?

Travelling westward last week, I was much pleased to observe that the Board of Works are waking up to a proper sense of their duty towards the statues of our worthies, at that end of the town. The statue of George III., at Cockspur-street, has been thoroughly cleaned, and looks as good as new, and I find preparations are making at Trafalgar-square to take off some of the grime attaching to George IV.* This is a step in the right direction, and deserving of public thanks. The alterations effected in the fountains are a decided improvement, although the centre jet does not reach high enough to give it just proportion with the other streams. Why not finish this good work by placing a few orange-trees round the basins, and thus relieve the stony aspect of the place? A few orange-trees on the terrace above would also have a capital effect. How grateful to the eye to fall upon the beautiful green colour of the leaves after wearying of the stone and brick composing

* They appear to have been treated after the new French process.

our street thoroughfares. In such matters as these we are sadly behind our foreign friends.

While the pen is in my hands I would beg to call attention to the state of the grass in Hyde and other parks, the pathways being allowed gradually to encroach upon the sward, and no system of enclosure appearing to be adopted to prevent the public passing over the affected parts, so that the growth of the grass again is rendered an impossibility, unless promptly seen to.

One word more and I have done. Why do the police seem to ignore the existence and utility of our public drinking-fountains?—is that part of their instructions? They seem to relish the idea of our British youth, of both sexes, giving one another shower baths, in which the public are often unwilling participators; or trying their skill in bending the cups, or breaking the chains to which they are attached. Sometimes they vary the amusement of Policeman X by wetting the pavement, so that ladies are obliged to raise their dresses higher than delicacy would prescribe. But surely the police must have strange notions of their duty when they permit our *gamins* to play such fantastic tricks; and I hope this notice may cause them to look sharper after the public property vested in drinking-fountains. EAGLE EYE.

OUR STREETS AND ROADS.

IN the road, "Dulwich-lane" I think it is called, that goes from the "George Canning," Tulse-hill, to the Lower Norwood-road, three new roads have been opened out, running Londonwards. They are named "Spenser-road," "Shakspeare-road," and "Milton-road." "Very good names, too," you will say. True; but what think you of disgnising them with this orthography,—"Spencer," "Shakspere"?*

Fortunately, at present, the names are only painted up on large fingerpost sort of things; but pray do get them corrected before the mistakes become indelibly fixed on people's minds.

I have another grievance in a drive I constantly am compelled to take. It is a hideous caricature, bronzed, of our beloved Queen, which stands before a public-house on the right hand going from Battersea Bridge to the Wandsworth-road. Recently, the eyebrows and parts of the hair have been gilded, making it more frightful than ever. Really the taste of passers-by† ought to be preserved from such outrages. Reformer of abuses! go and look at it, and do have it demolished forthwith. VIATOR.

CHURCHES FOR MECHANICS.

SIR,—About twelve months ago, you were good enough to insert a letter from me commenting on the sad want of church room for mechanics in the suburbs.

About that time, a friend of mine, struck with the same want, built an iron church, and the result was disappointing. He found that the working classes would not attend it. Having built his church, he is now compelled to use every means in his power to get it filled, and that with indifferent success. Among my own men, I find that scarcely one per cent. ever goes to church of any kind. There is a large Wesleyan chapel now built near my place, and it is nearly empty. I now tell my men, that in a money point of view it is my interest to employ men who are influenced, while working, by a higher motive than the hope of their Saturday night being favourable, and that by going to church they have the best chance of gaining those motives; and that therefore I would in future give the preference, between two equally good men, to him who went to church; and as a beginning, I paid the pew-rents for a few of them,—only a few shillings for a year, each. I am glad to say this seems to promise well: some of them go, and if it be only to please me they may continue for better reasons. Indirectly, also, good seems to come of it, as I have not for months heard a bad word among them, and I fancy that it must be some encouragement for a man to feel that his employer interests himself in his welfare, recognising his rights in the great brotherhood of Christianity. On the whole, I find my efforts are a good investment even in a money point of view.

My experience in this affair bears out the wisdom of the provision in the Bishop of London's Fund management for employing lay agents. If when churches were built the working classes would go, clergymen alone might almost be enough; but the main difficulty is to persuade the people to go to church: therefore visitation from house to house by laymen is essential.

Now, why should not employers of labour help in this matter? Every man is the centre from which radiates good or evil influences to those among whom he moves. Every man is, to an extent, his brother's keeper: employers of labour are thus responsible for the use of the influence they have over their men, and most powerful that is.

Messrs. Peto & Betts, and the Messrs. Silver, of North Woolwich, seem to recognise this responsibility fully: the former keep a teacher or preacher at all their large contracts: the latter do the same at their establishment.

If the majority of the City builders and contractors, without naming any other large labour employers, were personally to use all their endeavours to induce their people to go to church, there would be very little talk of the City churches being empty. If the men say they cannot afford to pay seat rents, it would be easy to make some arrangements with the clergymen which would make the burden easier. J. P. W.

* Mr. Charles Knight spells Shak*spere*, and tries to prove it correct. This spelling is not unfrequently adopted. Did not Shakspeare vary his own spelling?

† I was going to say the taste of the "public;" but *that* evidently has no taste. I wonder *if its beer has!*

BASILICA OF CONSTANTINE AND MAXENTIUS.

IN reply to your query I beg to say that the authority for the peculiar arrangements of the coffers at the insertion of the groins of the vaulted ceiling is from the late celebrated Luigi Canina. That gentleman discovered some fragments among the *débris* removed some years ago, which clearly showed this to have been the original design.

The arrangement is peculiar, and I do not think very pleasing; but with such an authority before me I had no alternative.

ARTHUR ASHPITEL.

STABLE ARCHITECTURE.

I OBSERVE Mr. Mayhew advises a bed of flints, broken, to be below the paving or flagging of the floors of stables. Permit me to observe that there is nothing so liable to cause *damp* as a bed of broken flints: they "sweat" so. The best bed is quarry sand mixed with cinders; or, better still, bricklayer's rubbish. I should also floor my verandah with saw-dust and tan, on a good hard bed of clay, well puddled; or, what is better, concrete. All heads of doors ought to be circular. There are several excellent remarks, but with the size of loose boxes suggested, a stud of fifteen horses would take up a large space. All mangers ought to be long and narrow, as horses eat from side to side. EBORACUM.

COMPETITIONS.

Chester Town-hall.—The plans have been opened to public view, and visited by considerable numbers of citizens and also strangers. The committee have determined to apply to the council for professional assistance in respect to adjudicating upon the plans, as they feel considerable difficulty in the matter. Some of the most imposing of the designs as to external details are disqualified, according to the local *Chronicle*, in consequence of a very material departure from the requirements of the council. Whether or not they will be allowed to compete rests with the council.

The Hawks Monument, at Gateshead.—In the council chamber of the Town-hall, Gateshead, the designs for the late Alderman Hawks's monument, to be placed in the chancel of St. Mary's Church, Gateshead, have been exhibited. Few of them differ from the ordinary run of mural monuments, and nearly all include a medallion portrait of the deceased. Coloured marbles are employed in some.

Bradford Exchange.—Objections to the selection have reached us as being opposed to the report by the professional referee, on the six designs sent in.

Wyggeston Hospital, Leicester.—The designs have been sent in, and are to be exhibited this Friday, Saturday, and Monday. Five months were allowed for their preparation, and the contemplated outlay is 15,000*l.* The subject is extremely interesting, viz., the rebuilding of a structure for an old foundation similar to Leicester Hospital at Warwick, and Fords at Coventry.

STAINED GLASS.

Peartree Church, Itchen.—This church has just received the addition of a painted glass memorial window, which has been placed in the eastern gable. The stone work of the gable and the old window have been taken down, and a new Portland stone Gothic window in the style of the fifteenth century inserted. It contains three lights with a traceried head, which has been designed and adapted by Messrs. Guillaume, Parmenter, & Guillaume, of Southampton, architects, under whose superintendence the whole of the works have been carried out. The painted glass was executed by Messrs. Ward & Hughes, of London, and the contract for the stone work was taken by Mr. James Brown, of Northam; the carving, &c., by Mr. Brain, of Shirley. The centre light, which is the largest, contains the principal subject, viz.—"The Ascension." Underneath is a medallion of "The Last Supper." The side lights are occupied by the following subjects in medallion:—Commencing at the top on the left hand are, "Our Lord's Baptism," "The Flight into Egypt," "The Adoration of the Magi," "The Apparition to the Shepherds," "Washing the Disciples' Feet," "The Crucifixion," "The Appearance to Mary in the Garden," "The Walk to Emmaus," "Christ blessing little Children," "Our Lord disputing with the Doctors." The last is contained in the centre quatrefoil of the tracery, the smaller openings being filled in with angelic forms.

St. Stephen's, Kirkstall.—A painted glass memorial window has been placed in the north transept of this church, to the memory of the late Mr. William Beckett, of Kirkstall Grange, by his widow. The following subjects, arranged on a blue ground, beneath canopies, occur in the window, which is of four lights:—Our Lord blessing little Children; the Good Shepherd; the Good Samaritan; Sermon on the Mount; Raising of Lazarus; Our Lord washing Disciples' Feet; Healing the Cripple at the Pool of Bethesda; the Son of the Widow of Nain raised to Life. In the tracery of the window the subject is—Our Lord in Glory, with Angels giving Praise. The artist employed was Mr. F. Preedy, of London.

St. Mary's, Taunton.—A new stained-glass window is about to be placed in the west end of St. Mary's Church. The money required to defray the expense has been collected by Mr. P. Taylor.

Trinity Church, Gainsborough.—The subject of the stained glass window, the gift of Mr. H. Capes, which has just been placed in this church, is "The Transfiguration of our Lord." In the upper part of the tableau Jesus is represented "with His face shining as the sun, and His raiment white as the light," accompanied on His left by Moses, bearing a copy of the law, and on His right by Elias. The three favoured disciples, Peter, James, and John, are lying on the summit of the mountain, prostrate with fear, and "heavy with sleep." In the lower panel is a group of nine figures representing the bringing of the lunatic demoniac child to the disciples at the foot of the mountain, and their inability, in the absence of their Lord, to cast the devil out. Owing to its being placed on the north side of the aisle, in a dark angle formed by the aisle and the north transept, the glass is not seen to the best advantage. This is the seventh window we understand, which has been placed in Holy Trinity Church by the same liberal donor. The artist was Mr. Clutterbuck, of London.

Trinity Church, Ayr.—One of the transept windows of this church has recently been filled with stained glass by Messrs. J. T. Lyon & Co. of London. This window consists of two large lancet-lights, and a vesica-shaped light above. The three subjects chosen are intended to represent the three persons in the Trinity. They are taken from parables contained in the 15th chap. of St. Luke's gospel;—the lost son,—"His father fell upon his neck;" the lost sheep,—"I give unto them eternal life;" and the lost silver,—"There is joy over one sinner that repenteth." The field portion of this window consists of grisaille pattern in the Early English style, of different tints of cathedral glass, with coloured lines showing the geometric forms. A coloured border of Early English ornament surrounds the whole.

THE BUILDING TRADES MOVEMENT.

Birmingham.—Nothing has occurred here as yet to alter the conclusion that the differences between masters and men are coming to an end. Some few operatives still stand out on minor points, but not so as to lead to a continued suspension of building operations. The local *Gazette* takes a view of such disputes which we have often urged; and it is well to quote this view as that of a disinterested public authority. "In future building operations," says the *Gazette*, "the advance of wages will go to increase the costs to the proprietors of buildings; and it is far from improbable that this advance will materially lessen the amount of work to be done. If this should be the case, the reduced amount of employment required will inevitably bring about a fall in wages. Considerations such as these should be present to the minds of the men as much as the advantage of the moment. These, in fact, are the justification of the statement, made by those who are not immediately connected with the dispute, that the interests of master and men are identical. It is to this extent only that the general public are concerned in the settlement of the late dispute."

Wolverhampton.—A strike has commenced in Wolverhampton. The masters had just settled a difference that had sprung up between themselves and the bricklayers and others, by conceding one hour a week; and they are paying them now at four every Saturday afternoon instead of five as hitherto. Now, however, the labourers are moving for a rise in their wages of 3s. a week during the three winter months, and 1s. a week during the remaining nine months of the year, so that their payment may be 18s. a week all the year round. Six firms have been selected for notice. Five are resisting the demand, and the sixth has given it on condition that the other masters do the same. The men say that they can stand out three months, and receive 12s. a week as strike money during that time.

Leeds.—We regret to learn that the trade is showing tokens of a disagreeable conflict here also. It began with a strike of the joiners working for Mr. Thorpe in fitting up the civil court at the Town-hall; and it afterwards became quite apparent that a general movement was taking place among the operatives for reducing the week's work from 58½ hours to 56 hours. Consequently the employers held a meeting, when it was resolved that the men should be offered payment at the rate of 5½d. per hour. This offer was refused, and the masters therefore determined that the whole of the joiners' shops represented at the meeting should be closed, unless the proposition of payment by the hour were previously accepted. This led to a crowded meeting of the men, who objected to work by the hour, and passed a resolution pledging the meeting not to work by the hour system. Attention was called at this meeting to the fact that whilst numbers were locked out because the masters refused to employ them unless they agreed to the hour system, there were others whose masters were willing to allow their men to work according to the old rules, namely, 58½ hours a week. Those men would be in doubt what they ought to do. It was resolved, therefore, that liberty be given them to remain at work on these terms. The masters also had a meeting, when payment by the hour was adhered to. An effort, however, is being made to effect an arrangement, and the joiners have been allowed by the unionists to return to their work at the town-hall; but men had already been got to replace them.

Leicester.—The bricklayers, slaters, plasterers, and stonemasons' labourers, employed at Leicester, have struck work in consequence of the masters having refused to comply with an application made to them by their labourers for an advance from 2s. 6d. to 2s. 9d. a day. It is the intention of the bricklayers in the town to strike, in the course of a few weeks, for an advance of 4d. a day, and the carpenters, joiners, and painters for an increase of 6d. per day. Their average wages at present are from 3s. 10d. to 4s. a day.

Hull.—The master joiners of this town have held a meeting, at which they unanimously resolved to accede to the request of their men for an advance of 2s. per week.

Middlesborough.—The builders here have had a second demand made upon them for an advance of wages. A few weeks ago the men in their employ had their wages raised from 26s. to 27s. per week. They now ask for a further advance of 3s., making their wages 30s. per week. There is every probability, it is said, that this will be granted, as the masters are just now in such a strait as to be unable to refuse what is asked.

Sheffield.—The edge-tool forgers of Sheffield have struck, and their strikers here are also idle: it is feared, too, that the grinders will also be soon out of employment. The advance demanded by the forgers is larger on some descriptions of tools than on others. The average advance demanded is said to be about twenty per cent. The men, however, say it does not exceed 12½ per cent. They complain that their wages are at present too low to maintain a family upon. The masters, on the other hand, say that the wages of a forger and his striker amount to from 3*l.* to 4*l.* a week for the two, and that it is impossible to concede the advance demanded without driving the trade from the town. The Continental manufacturers, they say, have made such progress of late in the manufacture of edge tools, and from the lowness of wages can sell them at such low prices, that already they are running the Sheffield manufacturers very hard in the race of competition. It is also urged that the competing houses in the Birmingham district have become formidable rivals, owing to the smaller amount of wages paid there, thus adding to the difficulty of conceding increased wages here.

Miscellanea.

MONT STORM'S BREECH-LOADING RIFLE.—In this ingenious and simple invention, the cartridge-chamber turns back on a hinge on the upper part of the barrel, so that when it is in this position the cartridge is inserted from the rear, the powder forward, and the ball towards the stock. Then, by closing down the chamber, the powder comes in the reverse position and the ball forward, the front of the moveable chamber thus forming a joint with the barrel round the ball, and the rear fitting firmly against the breech part of the connexion between barrel and butt. In order to prevent the escape of gas usual in breechloading arms, a steel valve of peculiar construction is inserted into the chamber, so as to enter the place where it joins the barrel. The action of cocking the gun gives the crank a reverse motion, which at once unlocks the chamber from the breech, and allows it to be raised by a force only sufficient to overcome the resistance of the spring which holds the chamber down under ordinary circumstances. The chamber can be raised when the gun is at half-cock, if required, an advantage which materially increases the security from accident. On opening the chamber after firing, by throwing it back, by means of its handle, to the top of the barrel, the exploded cap separates and falls from the cone, and the spring of the hinge striking on the barrel relieves the shock on the chamber, which may be loaded with powder and ball without changing the horizontal position of the barrel. Perfect solidity, combined with complete freedom in use, seem to be attained by the most simple means in this beautiful invention.

THE EFFECT OF VEGETATION ON THE RAIN FALL.—In the notes of the month's science and art in *Chambers's Journal*, it is remarked that the news of the cinchona plantations is most encouraging. There are nearly 360,000 plants in the Neilgherries, 8,000 in the slopes of the Himalaya, and 22,000 in Ceylon; all yielding a satisfactory quantity of bark. As is well known, Kew had a share in the work of transplanting the cinchona from Peru to India. It has been lately raising young cork-trees, which are to be sent in glazed cases to South Australia, where the Colonial Government intends to form plantations of that useful tree. The island of Ascension, once bare and desert, has been planted from Kew with trees, shrubs, and grass, all of which thrive,—and under the influence of which the climate of the island is much ameliorated. This reminds us that, since the growth of the trees planted in Lower Egypt, light showers of rain have fallen—a phenomenon never before witnessed in that country, by even the oldest inhabitant.

ST. PAUL'S CATHEDRAL. — A correspondent complains of the dirty state of the exterior of St. Paul's.

ARCHITECTURAL PUBLICATION SOCIETY. — The general meeting was held on Friday last. We will speak of the proceedings in our next.

CLOCKS.—A musical clock has been ordered by Mr. Guinness, for St. Patrick's Cathedral, Dublin. The dials are of copper, and are each 8 feet in diameter, and the main wheels are each 18 inches in diameter. The hours will be struck on a bell weighing one ton and a half, and the tunes played on nine other bells, varying in weight from 5 cwt. to 25 cwt. The pendulum measures upwards of 15 feet in length, oscillates once in two seconds, and has a weight or "bob" at its end of upwards of 2 cwt. Its present repertoire consists of four tunes, which will be performed at intervals of three hours, day and night; that is to say, at three o'clock a.m., and at three o'clock p.m., the clock, having struck the hour, will play "Adeste Fidelis" twice, with an interval of one bar between the parts: at noon and at midnight it will play the air "Martyrdom" twice, with two bars interval: at nine o'clock, morning and evening, it will play the "Sicilian Mariner's Hymn;" and at six a.m. and six p.m., "Rosseau's Dream," both airs, as in the former instances, being repeated.——The Rev. A. M. Wilson, Ainstable Vicarage, Penrith, has been supplied by Mr. Benson, of London, with a clock which shows time on a dial 3 feet 6 inches in diameter, and strikes on a bell weighing 1¼ cwt. The same clockmaker has sent one to Burbage, Derbyshire, which shows time on a 3-feet illuminated dial, and strikes on a bell of 10 cwt. This clock has been erected by order of Mr. E. W. Wilmot.

UTILIZATION OF METROPOLITAN SEWAGE.—The select committee appointed by the House of Commons to inquire into the best means of utilizing the sewage of the metropolis, have had several meetings, at which various gentlemen have been examined as to their respective schemes. Mr. G. Hopkins, C.E., was examined as to the scheme of Messrs. Napier & Hope, for conveying the sewage to the Maplin sands; Mr. James Moore as to his scheme for utilizing the liquid sewage; Mr. G. Townsend, secretary of the London Sewage Utilization Company, and Mr. Roberts, director of that company, as to their scheme for utilizing the liquid sewage; Sir C. Fox and Mr. Richard Smith as to their scheme for distributing the liquid sewage over 30,000 to 40,000 acres of land; Mr. G. Shepherd, C.E., as to his plan of dealing with the liquid sewage; and Mr. Thomas Ellis as to his project for spreading the liquid sewage over something like 500,000 acres of land, retailing it to farmers, and retaining the sewage in his own hands. Mr. Ellis complains of inaccuracies in the committee's printed proofs of his evidence.

DISCOVERY OF ANCIENT BRICKKILNS IN FRANCE. At the last sitting of the Academy of Sciences, a paper was received from M. Vionnois, describing six brick-kilns of the Gallo-Roman period discovered at La Roche-du-Thay, in the department of Ille-et-Vilaine. The fragments of tiles lying about sufficiently prove their origin, their shape being Gallo-Roman, and some of them even bearing the trade-mark of the brickmaker, which, however, it has been impossible to decipher. The tiles are flat, 40 centimetres in breadth and 2 in thickness, with lateral rims. The kilns were all alike, and one of them is still in good preservation. It is rectangular, 2·08 metres long by 1·70 in breadth. Its walls are vertical. The fireplace is 10 centimetres deeper than the kiln itself, and separated from it by a floor resting on three supports, and pierced with holes through which the flame penetrated between the tiles placed vertically in rows. The holes near the perimeter are wider below than above, while the contrary is the case with those near the centre. From all this it appears that bricks used to be burnt in kilns similar to those now used for earthenware.

LONDON LABOURERS'-DWELLING SOCIETY.—The objects of this society, as we have before intimated, are to purchase and put into decent condition houses for the residence of the labouring classes; and let them at rents which, after paying all expenses, will give a fair interest to the members. The society already possesses house property to the extent of more than 10,000*l.* The directors state that for the three years during which the society has been in existence the members have received equal to 5*l.* 3s. 6d. per annum on their investments (*i. e.* 5 per cent., the society paying the income tax); and that there is every reason to expect that this rate of dividend will be maintained. They are now extending their operations, and are receiving applications for a new issue of shares to the extent of 10,000*l.* The secretary resides at No. 2, Carlisle-parade, Hastings.

CHURCH STRUCK BY LIGHTNING. During a recent thunderstorm, the lightning entered Llanelian Church, Denbighshire, at the top of two of the arches of a three-light window in the north chancel, having burnt two holes through the lead at the apex of the arches. It knocked out some of the oak panelling of the chancel, scattering it about; then passed to the roof, scorching and blackening the gilding of the chancel arch; and out at the top of the gable, shattering the wall, here about a yard thick, and raising some of the coping. The lightning struck the outer wall in several places about the window, without breaking a single pane. It forced a passage for itself only through a small hole in the leads, but at the same time divided and separated the strong stone mullioned arch at the top, and some stout stonework inside above the glass. The hail which fell at the time was very large, and the thunder-cloud very near, the sound having a peculiar crashing, cracking effect. St. Elian's Church is very high, and in an exposed situation.

THE LATE INUNDATION NEAR SHEFFIELD.—A Bill is now under the consideration of the examiners of the Houses of Lords and Commons on standing orders, Messrs. Smith & Frere, prior to its coming before committee, to make provision for the assessment of damages claimed against the Sheffield Waterworks Company, arising out of the late inundation. For this purpose it is proposed to appoint three commissioners to assess the amount of damages, compensation, and purchase-money, the chief commissioner to be a barrister of not less than seven years' standing, to be nominated by the Board of Trade, unless otherwise agreed upon; the other two to be justices of the peace for the West Riding; the chief commissioner to receive 1,500*l.*, the two other commissioners 750*l.* each, and the clerk 500*l.* for their services, during the whole period of the duration of the commission, or a proportionate part, according to the duration of their services, the expenses to be paid by the Sheffield Water Company, and the sittings of the Court to be open.

THE WEST LONDON UNION WORKHOUSE.—The first stone of the new West London Union Workhouse has been laid by the Chairman of the Board of Guardians. The site selected is in the Cornwallis-road, near the Hanley Arms, Upper Holloway. At the present time the workhouse of the union is situate in West-street, West Smithfield, in the city of London, and it has been required by the Corporation of the city to be given up to them, under the compulsory clauses of an Act of Parliament which they had obtained for the erection of a new metropolitan meat and poultry market in Smithfield. The population of the West London Union, as taken in 1861, was 27,142: as taken in 1831, it was 27,929. The architects are Messrs. Searle, Son, & Yelf, of Bloomsbury; and the builder, Mr. Hart, of Great Dover-street.

CLIFTON SUSPENSION BRIDGE.—The construction of the roadway has been commenced. Some lengths of the longitudinal girder have already been fixed in their permanent positions on each side of the river. These lengths are 16 feet long, and weigh about a ton each, and the two girders which enclose the carriageway from pier to pier will each be formed of 40 lengths.

ARTIFICIAL DIAMONDS.—A correspondent, in reference to our remarks on this subject, suggests that even from carbon mixed with other matter, and thus dissolved, perhaps diamonds could be formed by galvanism, or electro deposit. As we have thrown out the suggestion as to the formation of diamonds, he thinks, the consideration of the subject may lead to some results.

TELEGRAPHIC.—A letter from St. Petersburg states that the telegraph intended to place the Old and New Worlds in communication by way of Behring's Straits, separating Russia from America, is not only decided on, but is actually in course of execution.

ELECTRIC LIGHT IN FISHING.—A stranger, from Paris, has been making experiments recently at Honfleur with electric light in fishing. The fish, attracted by the light, arrive in shoals at the surface of the water, and are taken without any difficulty with a net.

LONDON HOSPITAL.—The foundation stone to the new west wing is to be laid by His Royal Highness the Prince of Wales, on the 4th of July next.

OPENING OF THE ALBERT WING OF BATH HOSPITAL. The first stone of the Albert wing of the Bath United Hospital has been laid by Major A. W. Adair, Provincial Grand Master of the Masons in Somerset, the ceremony being observed as a grand masonic festival. The erection of this wing is not so much to increase the number of beds for patients as to provide them with better accommodation, particularly as regards light and air, and to supply many improvements. A colossal bust of the Prince, executed by Mr. Noble, and which received the approval of Her Majesty, will be placed in the entrance-hall of the wing.

ROYAL HOSPITAL FOR INCURABLES.—The first stone of a new wing to the mansion recently purchased for this charity at West Hill, Putney Heath, and known as Melrose Hall, has been laid by Mrs. Henry Huth, wife of the treasurer of the institution. The stone bears the following inscription:—"Founder, Andrew Reed, D.D., 1854; Treasurer, Henry Huth, Esq., 1861. This stone was laid by Mrs. Henry Huth, 11th May, 1864." Mr. W. P. Griffith, London, is the architect of the new wing; and Mr. William Bird, of Kensington, is the builder. The works are in rapid progress, and the building will be opened before the autumn.

DESTRUCTION OF MILTON'S HOUSE IN LONDON. Another of the ancient buildings in the City will, in the course of a few days, be razed to the ground—namely, the dwelling which was built for, and for some time occupied by, John Milton, situate in Barbican, near to Albion Chapel, and exactly opposite Dixon's repository. This house, and several others contiguous thereto, have been for some time scheduled by the directors of the Metropolitan (Extension to Finsbury) Railway.

INDUSTRIAL ART EDUCATION IN FRANCE.—With reference to improved art education in France, several associations have been founded. One of these, "*La Société du Progrès de l'Art Industriel*," which has for its president M. Viollet-le-Duc, the architect, has just appointed a commission to draw up a working plan for a Museum of Industrial Art, with galleries for permanent exhibition, sale-rooms, lecture-theatres, and library in the centre of Paris, and has issued an appeal to those interested in such matters for aid and advice.

CRYSTAL PALACE.—A very interesting collection of modern pictures, the property of a private gentleman, has been added to the attractions of the Crystal Palace.

ARCHITECTURAL ASSOCIATION: VOLUNTARY EXAMINATION CLASS.—The meeting of the class will be held as usual on Monday next, the 5th inst. Subject, "Masonry," by Mr. E. J. Tarver; commencing at 7·30 p.m.

TENDERS.

For taking down four cottages, and erecting warehouse and machine-room, in Lambeth Marsh, for Mr. Edward Grove. Mr. Robert Parriss, architect. Quantities supplied:—

Stevens	£678	15	0
Mann	630	0	0
Lathey Brothers	627	0	0
Shelton	583	0	0
Wayman	580	0	0
Green & Pearce	577	0	0
George	509	0	0

For alterations and additions to house and premises, Finsbury-place South. Mr. H. H. Collins, architect:—

Pritchard	£1,397	0	0
Ennor	879	0	0
Macey	865	0	0
Newman & Mann	856	0	0

For the erection of a dwelling-house, at Acton, Middlesex, for Mr. Raefelle. Mr. H. Phillips, architect:—

Wills	£407	0	0
Preston	400	8	0
Kent	395	0	0
Marsland	390	0	0
Adamson	390	0	0

For alterations and improvements to No. 473, Old Kent-road, for Mr. W. G. Jackson. Mr. Phillips, architect:—

Preston	£571	0	0
Wills	567	0	0
Kent	559	0	0

For works at Littlebourne Church, Kent:—

Tagg	£407	10	0
Cox & Son	440	0	0
Phillips	404	10	0
Wilson	415	0	0
Bonnett	357	6	0
Cozens, Brothers (accepted)	347	4	0
Jarvis & Co.	309	0	0

For taking down and rebuilding top portion of spire, St. Mark's, Hull. Mr. William Kerby, architect:—

Hall	£95	0	0
Haswell (accepted)	80	0	0

For a parsonage at Airmyn, near Howden. Mr. Willi Kerby, architect:—

Kassell	£968	0	0
Wilson	954	9	0
Richardson	904	0	0
Sinclair	890	0	0
Taylor	870	0	0
Richardson & Elliot (accepted)	867	0	0

For the erection of a Protestant institute, in Kingsto square, Hull. Mr. William Kerby, architect:—

Barrett	£2,172	14	0
Holmes	2,099	0	0
Foster	2,045	0	0
Jackson	2,040	0	0
Haswell	2,010	0	0
Musgrave*	1,960	0	0

* Accepted, subject to certain reductions.

For a parsonage, at Ulrome, near Burlington. M William Kerby, architect:—

Holderness	£340	0	0
Sergeant	323	0	0
Bennard (accepted)	609	1	6

For making roads and footpaths on the Essex Freeho Land Company's estate, Leytonstone. Mr. John Dean, Surveyor:—

Harrison	£347	0	0
Birt	300	0	0
Green	298	0	0
Pound	281	0	0
Porter	272	0	0
Horn	261	0	0
Ingham	250	0	9
Banker	249	0	0
Hill	249	0	0
Hubbard	245	0	0
Pizzey	242	0	0
Harris (accepted)	229	0	0

For the sewerage works of the Local Board of Healt district of Jarrow, near South Shields, county of Durha Mr. T. M. Clemence, C.E.:—

Robson & Hall	£5,934	4	8
Eden	5,453	0	0
Wood	5,400	0	0
Hall	5,250	14	0
Craig	5,054	10	9
Kennedy & Armstrong	5,000	0	0
Nixon	4,800	0	0
Thane	4,354	0	0
Wells, Lough, & Thomson	4,345	7	1
Hudspith (accepted)	4,305	1	0

For adaptation of ground-floor of No. 3, Victori street, Westminster, to a new branch of the London an County Bank. Mr. C. Octavius Parnell, architec Quantities supplied by Mr. C. Balam:—

Higgs	£1,950	0	0
Myers	1,939	0	0
Carter	1,875	0	0
Hill	1,875	0	0
Fist	1,788	0	0

For the North End sewer, Fulham:—

Hill & Keddle	£13,297	0	0
Reddin	12,899	0	0
Bird	12,699	0	0
Lavers	12,500	0	0
Thirst	12,295	0	0
Moxon	10,960	0	0
Mann	9,745	0	0
Nowel & Docwra	9,725	0	0
Wigmore & Wittick	9,500	0	0

For new west wing, London Hospital. Mr. Cha Barry, architect. Quantities supplied by Messrs. Strud wick & Co:—

Hill & Keddell (accepted)	£22,966	0	0

[ADVERTISEMENT.]

CHURCH, TURRET, and STABLE CLOCKS. J. W. BENSON, having erected steam-power and improved machinery for clock-making, at the manufactory, Ludgate-hill, will be glad to furnish to clergymen, architects, and committees Estimates and Specifications of every descrip tion of Horological Machine, especially cathedra and public clocks, chiming tunes on any number of bells. A descriptive pamphlet on Church Clocks post free for one stamp. Watch and Clock Maker by Warrant of Appointment to H.R.H. the Prince of Wales, and maker of the great clock for the Exhibition, 1862. 33 & 34 Ludgate-hill, E.C. Established 1749.

ADVERTISEMENTS.

THE FINE ART EXHIBITIONS OF THE SEASON.

THE ART-JOURNAL for June (price 2s. 6d.) contains elaborate critical and descriptive articles on the Fine Art Exhibitions now open in London, by eminent and well-informed writers, viz.:—

The Royal Academy.
The Society of Painters in Water-Colours.
The Royal Marriage Picture.

The Institute of Painters in Water Colours.
Exhibition of French and Flemish Pictures.

The line engravings are:—"Christian in the Valley of Humiliation," by George Greatbach, after F. R. Pickersgill, R.A.; "Orange Mechanician going to Places," by E. Wallis, after J. M. W. Turner, R.A.; "Ariel," by E. Roffe, from the statue by J. Lough. Among the other contents of the number will be found "The Dublin Exhibition of 1864," with illustrations; "Wedgwood and Etruria," by Llewellynn O. Jewitt, illustrated; "Portrait Painting in England," by Peter Cunningham, F.S.A.; "Art Work in June," by Rev. J. G. Lloyd, M.A.; "History of Caricature and of Grotesque in Art," by Thomas Wright, illustrated; "Almanack of the Month," from designs by W. Harvey; "Reflections in Water Geometrically Considered," by Captain A. W. Drayson, Royal Artillery, illustrated with Diagrams; "Illustrated Prayer Books," with illustrations; Parliamentary Grants for Art, &c. &c.

London: JAMES S. VIRTUE, 26, Ivy Lane.

ARCHITECTURAL MUSEUM LECTURES.

Now ready, 8vo, 1s. each,

LECTURES DELIVERED at the ARCHITECTURAL MUSEUM, SOUTH KENSINGTON, MARCH 16, and APRIL 12, 1864.

I.

The ART-WORKMAN'S POSITION. By J. B. BERESFORD HOPE, M.A. D.C.L. F.S.A. President.

II.

JUDGING from the PAST and PRESENT, what are the PROSPECTS for GOOD ARCHITECTURE in LONDON? By HIS EMINENCE CARDINAL WISEMAN.

JOHN MURRAY, Albemarle-street

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the Present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts Royal 8vo. price 8s neatly bound.

London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions in Quarto, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING, Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten Parts at 3s. or in boards, 30s.; containing upwards of 120 Steel Plates, and numerous Woodcut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Churchyards, &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates and Numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 35s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE: containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Description of the Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 39s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other building for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 30s. boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and adapted to the various styles of Architecture. By D. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by actual Specimens of Hard Drying Graining and Marbling. Ten Parts, at 3s.; or in boards, 33s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1833, of the Encyclopædia. The Inventions and discoveries recently made have claimed the sedulous attention of the Editor; for, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing "the existing estate of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth lettered, price 30s.

TO CARPENTERS, JOINERS, STAIRCASE BUILDERS, &c.

Now Publishing, the Twelfth and greatly improved Edition of the JOINER'S INSTRUCTOR: a new work on Staircasing, Handrailing, &c. on the Orthogonal system, upon entirely new principles.

By LANGLEY BANKS, WESTON, CLARK, PERRY, FOSTER, WHITE, and other of the most experienced men in the trade.

Edited by JOSEPH GALPIN.

The work contains upwards of 90 plates, with letter-press description. Published in 6d parts, at One Shilling each; or neatly bound in cloth, in three volumes, at Fourteen Shillings each.

TERRA COTTA and Fine STONEWARE
POTTERY, warranted to stand Frost.
JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.
A Medal at the International Exhibition was awarded, in Class 10 Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra'Cotta."
Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Consoles, Gargoyles, Roofing, Guttering, silk, nine, and twelve inch Paving Tiles, &c. &c.
Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.
London Office, 377, Oxford-street, W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq., together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, fringe, &c. will be sent on application to Benthall Works, Broseley, Salop.
May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.
Sole Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No. 21, Wharf Freeleefield-street North, City-road Basin. N. Sndly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and 3dly, that the "Reports of the Juries," page 683, of the Great Exhibition. 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Stafford shire, as the first of the kind in the world.

FOR SALE, a STEAM SAW FRAME, for cutting 16-inch stuff; quite new; only been in use two months proprietor having no further use for it.—Apply to F. SAGE, Builder, Sompton-lane, Gray's Inn-road.

TO BUILDERS and OTHERS.—A first-class DOUBLE and SINGLE PURCHASE STEAM CRAB TO BE SOLD; well arranged for hoisting heavy goods, a circular saw-bench and mortar mill may be applied to the same at a small outlay. A bargain seldom to be met with.—For particulars, apply to WM. HOPE, Engineer, &c. 57, Cornwall road, Lambeth. All kinds of old machinery, &c. bought, at cash prices.

SASH WEIGHTS, 5s. per cwt. House Castings generally supplied on the most reasonable terms. Whitwell Iron Foundry, Whitwell, Durham—London depôt, Hope Wharf Rotherhithe S.E.

NORTH-EASTERN RAILWAY.—DARLINGTON SECTION.—TO BE SOLD, SIX STATIONARY ENGINES, lately in use on inclined planes, &c. upon the Stockton and Darlington Railway viz:
MEETING SLACKS ENGINE, 50 horse power, nominal; cylinder, 28½ inches diameter; stroke, 5 feet long; flywheel, 18 feet 3½ inch diameter; 3 rope rolls, each 6 feet diameter, with shafting and spur gear.
ROWNES GILL ENGINE, 30-horse power, nominal; cylinder, 20 inches diameter; stroke, 5 feet 11½ inches long; flywheel 16 feet diameter; 2 sets of rope-rolls, 10 feet diameter, with shafting and spur-gear.
CARR HOUSE ENGINE, 50 horse power, nominal; cylinder, 28 inches diameter; stroke, 5 feet 2-inch long; flywheel, 20 feet diameter; 3 rope rolls, one 9 feet 7 inches, and two 6 feet diameter, with shafting and spur gear.
BRUSSELTON ENGINE, 80-horse power, nominal; cylinder 3 feet diameter; stroke, 5 feet long, flywheel, 24 feet 10 inches diameter; crank shaft, 22 feet 11 inches long by 13 inches diameter; 3 rope rolls on ditto, one 13 feet 4 inches diameter, the other 6 feet 2 inches diameter.
BLACK BOY OLD INCLINE ENGINE 50 horse power, nominal; cylinder, 27 inches diameter; stroke, 6 feet long; fly-wheel, 18 feet 6 inches diameter; 1 bedler, 28 feet long by 7 feet 6 inches diameter; 2 rope roll, 8 feet diameter, with shafting and spur gear.
MIDDLESBOROUGH WATER HOUSE ENGINE, 6-horse power, nominal; cylinder, 9 inches diameter; stroke, 2 feet 3-inch long; flywheel, 8 feet 6 inches diameter; 1 boiler, 13 feet 9 inches long by 3 feet 9 inches diameter.
Further information may be obtained on application to Mr. W. ROSE, Engine Works, Northallerton, Darlington. Parties wishing to purchase the same must send in their offers to this Office, not later than TUESDAY, the 21 day of JUNE, 1864, stating the price or prices which they propose to give, for the Whole or any such engines as they now stand. The engines will have to be removed by the purchaser or purchasers at their own cost. THOS MAC NAY, Secretary.
Railway Office, Darlington, May 25th, 1864.

SALE of REGISTER GRATES.—In consequence of the great demand for Messrs. BROWN & GREEN'S PRIZE MEDAL KITCHEN RANGES, and the ROYAL REGISTER, and SUN AND STEAM APPARATUS, in connexion with them, it is found impossible any longer to devote space for a Stock of Register Grates at the London warehouse. Those now on hand have therefore been marked off at or below cost price, in order to effect an immediate clearance.
FREDERICK THOMAS.
72-74, Bishopsgate-street Within, June 2, 1864.

R. FOX, 5, Conant-place, West-India-road, E. Contractor for laying Devana's thick Vieille Montagne Roofing Zinc (on the new system introduced by Mr. Edmeston, Architect to the Vieille Montagne Zinc Mining Company, of Crown-court, Old Broad-street, E.C.) by which durability and great neatness of work are obtained, cash and Skylight Maker. All kinds of Ornamental and other Z nc Work executed in the best manner.

GROUND in HIGH STREET, Borough.—The Governors of St. Thomas's Hospital are prepared to receive TENDERS from parties willing to take on a Building Lease, for a term of 80 years from Christmas next, the valuable and extensive PREMISES known as the CATHERINE WHEEL INN, and of 193 and 194 HIGH STREET, BOROUGH. Plans and Particulars, with form of Tender, may be obtained at the counting-house of the Hospital, No 14, St. Thomas's street, Borough, or at Mr. HENRY CURRY'S office, No 4, Lancaster-place, Strand, and the Formal Lease may be seen (if desired) at the Office of Messrs. CLAYTON, COOKSON, & WAINEWRIGHT, No 6, New square, Lincoln's Inn. The Tenders are to be delivered on or before MONDAY, the 6th JUNE, at 13, St. Thomas's-street, where the Governors will meet on TUESDAY, the 7th of JUNE, at half-past TEN o'clock, a.m. to consider the same. The Governors do not bind themselves to accept the high-est or any Tender.
HENRY CURRY.
4, Lancaster-place, Strand, W.C. May, 1864.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views.—Apply to A.B. 197 Bermondsey-street, S.E.

EXTENSIVE PREMISES TO BE LET, comprising a large piece of ground, inclosed with walls and following-gates, 200 feet deep by 70 feet wide, fronting the main road, within ¼ mile of the Bank, with or without a capital eight-roomed house.—Inquire of JOHN GOODMAN, 25, Hereford-place, Commercial-road East.

BUILDING LAND, near Croydon, in a most desirable locality, within three minutes' walk of a station, and 7 miles from London Bridge. Houses in great demand. Terms, 99 years, direct from the Freeholder. Money advanced.—Apply, 21, Blackfriars-road.

BUILDING GROUND.—TO BE LET, from Michaelmas next, a valuable PLOT of GROUND, adjoining the Lea Bridge Railway Station, with a frontage of 80 feet to the Lea Bridge-road, the total area being 2½ acres.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

CITY of LONDON.—FORE STREET and CRIPPLEGATE BUILDINGS.—Valuable PROPERTY TO BE LET for TENDER on a long Lease or Leases, for the building or other improvements, subject to present unexpired terms; comprising Shops in Fore-street, Nos 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, and 22; in Cripplegate buildings, Nos 4, 5, 6, 7, 8, 9, and 10, being the Cripplegate Tavern; also the premises known as the White Horse-yard, occupied by Mrs. Scholes. The frontage in Fore-street is 221 feet 8 inches; in Cripplegate-buildings, 109 feet 6 inches. The whole comprises more than half an acre, being about 23 649 square feet. Possession of a small portion can be given at Michaelmas, 1864; of the larger portion at Midsummer, 1865; and of Nos. 12, 13, 14, 15, and 22, Fore-street, in 1871, and of the Cripplegate Tavern, in 1873. The property may be tendered for in whole or in part, to suit the views of the proposers. The estate is in close contiguity with the Manchester and London markets, likewise with the proposed Finsbury station of the Metropolitan Railway, and with which it might, no doubt, hereafter be placed in direct communication, and with the terminus of the North London Railway. The site is within three minutes' walk of the Bank of England; and by the new railroads, ready communication will be had with every part of the metropolis and suburbs, with those of the United Kingdom, and with the docks and port of London. Possession may be had as before stated, subject to the materials being sold and cleared away. The day fixed for sending in the Tenders is MONDAY, the 13th of JUNE next.—For permission to view, apply to the tenants or occupiers. The particulars and plans, and conditions of letting, may be seen at the Offices of Mr. RICHARD BUTER, Architect and surveyor, 25, Gracechurch-street, E.C.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; dressing-room; lofty cellarage and coachhouses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 28 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

BUILDING LAND at CHITT'S HILL, WOOD GREEN, overlooking three different counties, and fronting the high road, eight minutes walk from the station and Alexandra Park, TO BE LET for the erection of superior Villa Residences, which are in great demand in this beautiful locality. Term, 99 years. Money advanced if required.—A plan may be seen, and particulars obtained, on application to S. HEWITT, Architect and Surveyor, 101, Great Russell-street, Bloomsbury, W.C.

BUILDING LAND, Reading, Berks.—FOR SALE, by PRIVATE CONTRACT, in lots suited for the erection of private Dwelling-houses, several acres of FREEHOLD BUILDING LAND forming part of the rapidly improving Western Suburb of the Town. The roads on the Estate are excellent. The property is ornamentally timbered, and the several portions of it are well fenced in with hedges, and planted with trees and shrubs of many years' growth. Distance from the centre of the Town and three Railway-stations, about a mile. A second Church is being erected in the immediate neighbourhood. Money advanced if required.—Apply to Mr. W. WEEDON, Solicitor, Reading.

IMPORTANT to COAL PROPRIETORS, CAPITALISTS, and OTHERS.—The owners of valuable MINES of COAL lying within and under a compact freehold estate of upwards of 150 acres situate about three miles from the important manufacturing town of Rochdale, Lancashire, are prepared to treat for the absolute SALE of the COAL, or to enter into favourable arrangements for leasing the same for a term of years. Good turnpike roads intersect the estate, and the same is within very easy distance of railway and canal.—For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

TO BUILDERS and OTHERS.—BROMLEY, KENT.—LAND to BE LET, for Building, on Lease, for ninety-seven years, about half a mile from a railway station and adjoining the town of Bromley. Soil, sand and gravel, with a good supply of water.—For particulars, apply to Messrs. PRESTON & DORMAN, 15, Gresham-street, E.C.

BUILDING LAND TO BE LET on LEASE, in the Lower Richmond-road, within a mile of Putney and Barnes Railway Stations.—Apply to W. E. WOOD, Timber Merchant, Wandsworth.

ALUM BAY ESTATE, FRESHWATER, ISLE of WIGHT. BUILDING LAND TO BE LET, for a term of ninety-nine years (under a moderate Rent) in lots. Parties may be obtained of Mr. AUGUSTUS FREKE, Architect and Surveyor, 32, Regent's-street, Covent Garden, London; of Mr. WILLIAM RAWLINS, Solicitor, Winchester; of Mr. C. F. FISHER, Solicitor, Ventnor; or of Mr. S. M. BAKER, Solicitor, Ryde, where plans showing the distribution of the estate may be seen.—The journey from London viâ Lymington and Yarmouth, can be accomplished in about five hours.

NEWGATE STREET.—ST. BARTHOLOMEW'S HOSPITAL.—GROUND TO BE LET for Building, with a frontage of about 70 feet, on a lease of Sixty-one years, from Midsummer next, with immediate possession.—For further particulars, apply at Mr. HARDWICK'S Office, 1, Hare-court, Carey-street, Lincoln's-inn-square. WILLIAM WILBY, Clerk.
May, 1864

BUILDING LAND TO BE LET, on the East Park Estate, Lower Kennington-lane. 8 About five minutes' walk from the Elephant and Castle, Newington.—Apply to Mr. PEXBY, 55, Lower Kennington-lane S

SEAFORD, near NEWHAVEN, SUSSEX. To Builders and Others.—Eligible PLOTS for BUILDING, with full sea view, and comprising every advantage. TO BE LET, on Building Leases for 99 years. The railroad is to open in less than a month, and it runs directly into the centre of this beautiful and sheltered watering-place.—For plans and particulars, apply to Messrs. WM. G. HABERSHON & PITE, Architects, 38, Bloomsbury-square, London, W.C.—Mr. OCKENDEN, Bailiff of Seaford will show the ground.

TO TIMBER MERCHANTS, BUILDERS, ENGINEERS, &c.—FOR SALE, the LEASE of extensive PREMISES, near Curtain-road, Shoreditch. Rent and taxes, 30l. last quarter. Price 50l.—Inquire before TEN, Mr. PERRY, 64, Curtain-road.

WATERSIDE PREMISES, PIMLICO.—TO BE SOLD, with immediate possession, situate in Upper Belgrave-place, and on the banks of the river, a wharf of 4,400 feet, with Office Landing Crane, enclosed with following gates, and the use of extensive waterway. Nominal rent. Lease sixty three years.—Apply to PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, Westminster.

BLACKHEATH.—To BUILDERS.—TO BE SOLD, Eight Brick-built CARCASES of Ten-roomed Private Residences (or of which are very forward state), and Piece of Ground adjoining, with sufficient space for four similar residences, very pleasantly situated near the railway station and heath. Held for 87 years, at moderate ground-rents. Apply to Messrs. BAILEY & VAUGHAN, Auctioneers and Land Agents, Greenwich, and No. 2 Alchurch-yard, City.

EXTENSIVE MANUFACTURING PREMISES, near Victoria Station, Pimlico, consisting of 9 spacious principal and several minor work-shops, front warehouse and packing room, 2 counting-houses, 4 roomy cellars, foreman's dwelling, stable and cart-house, large yard with entrance gates, and every convenience for carrying on almost any business of magnitude. TO BE LET, on Lease, for about 35 years.—Apply to Mr. EDWIN WHITE, Auctioneer, 12, Holborn-bars, E.C.

BUILDING LAND.—TO BE LET, on the Grand Junction Canal, LAND for BUILDING, bounded on one side by the Great Western Railway, and on the other by the Grand Junction Canal. The Canal also runs into the Estate. It is situated at Southwell, in Middlesex, and is well adapted for Wharfs Manufactories, Cottages, and the like.—For terms, apply to the Southall Brick Company (Limited), 4, Adelaide-place, London Bridge

TO BE SOLD, to pay SEVEN and HALF per CENT. the IMPROVED RENTAL of 150l. per annum, which is let on lease, and held from the Archbishop for 18 years, on West End newly built Shop Property. Apply by letter to Mr. LLOYD, 181, Regent-street, St. James's

A LARGE LOFT to BE LET, 56 feet by 21 feet, near the Midland Railway, Camden Town; also House and Shop.—Apply to Messrs. STRINGFIELD & BLYTH, Bangor Wharf, Kings-road, Camden Town.

BUILDERS' PREMISES WANTED, within one mile of Temple Bar. They must contain an area of at least 14,000 feet on the ground floor, and workshops or space to build them on.—Please send particulars to J. M. MACEY, Milford Wharf, Strand.

UPPER NORWOOD (close to the Crystal Palace).—TO BE SOLD, a capital FREEHOLD ESTATE, comprising two well-built residences, and six building sites and a half of land admirably situate and exceedingly well adapted for the erection of villa residences. The land yields excellent brick earth, and affords a splendid opportunity for a successful building operation.—For particulars and terms, apply to Mr. J. WINTER, Land Agent, Westow-hill, Norwood, S.

TO BRICKMAKERS.—TO BE LET, in consequences of the decease of the late owner, a BRICKFIELD of about THREE ACRES, situate on the outskirts of a town in Hertfordshire, about twenty miles from London, and half a mile from the railway station. It is now in full work, and abounds in brick earth 25 feet deep; lime is also found upon the property. In consequence of extensive building operations now taking place in the neighbourhood, a ready sale of all bricks made can be effected at very remunerative prices.—Messrs. DEBENHAM & TEWSON, 80, Cheapside.

DARTFORD, KENT.—FOR SALE, Valuable FREEHOLD BUILDING LAND, in plots of 50 feet frontage, and upwards, at Dartford New Town, about half a mile from the Railway Station.—For particulars, apply to A. RUSHALL, Esq. Solicitor, Dartford, Kent; or to Messrs. COBB, Surveyors and Land Agents, 26, Lincoln's-inn-fields.

NO. 14, BOW LANE, CHEAPSIDE, E.C. TO BE LET, suitable for Offices or Warehouses. It adjoins the land advertised to be let on lease by the Salters' Company.—Apply to Messrs. WIMBLE & TAYLOR, Architects, 2, Wallbrook, or Messrs. DEBENHAM & TEWSON, 80, Cheapside.

FREEHOLD LAND TO BE SOLD or LET, for Building, in plots of half an acre, seven miles from Town, ten minutes' walk from the Ealing Station; delightfully situate.—For plans and particulars, apply to Mr LOMAX, Land Agent, 3, Orchard-street, Portman-square. Trains from Farringdon-street.

BUILDING LAND, CROYDON.—For SALE, in one or two plots, by Private Contract, about TEN ACRES of eligible FREEHOLD LAND, adjoining Penge Rectory, near the White Horse road and the Thornton Heath station on the London Bridge and West end lines of railway.—For particulars apply to Mr. FENTON, Civil Engineer and Surveyor, 19, Great George-street, Westminster

WHARF.—WANTED, on the Thames, in London, a WHARF, of easy access, to receive blocks of marble and stone. Part of one with a crane preferred.—Address particulars to A. B. 18, Parliament street.

BUILDING LAND.—Several PLOTS TO BE LET, on LEASE for 99 years, in the Park. Highgate. One of the healthy situations in the vicinity of London, with extensive and beautiful views. A new church and a railway station immediately contiguous. Sewers and roads on the estate improved; constant supply of Gas and water can be readily supplied. For particulars apply to T. H. WYATT, Esq. No. 77, Great Russell-street, Bloomsbury, W.C.; or to Mr. WHEELER, Builder, South Grove, Highgate, N.

FIRST-RATE SITES of FREEHOLD BUILDING LAND TO BE LET, on the usual terms, at Lower Norwood, close to the station; at Teddington, very near the station; and at Folkestone, Canonbury, &c.—Apply to Mr. EDMESTON, Architect and Surveyor, 5, Crown-court, Old Broad-street, E.C.

PRIZE MEDAL, 1862.
HAMILTON & CO.
No. 10, GREEK-STREET, SOHO-SQUARE, LONDON, W.
Sole Manufacturers of
C. A. WATKINS'S PATENT WIRE-BOUND ROUND and OVAL
PAINTING BRUSHES.
Distemper Brushes, Sash Tools, Stippling Brushes, Gilders' and Grainers' Tools.
These goods are made of the best materials and workmanship, and have obtained a high reputation among the chief decorators in the kingdom. Varnish and Colour Manufacturers, Oilmen, Merchants, &c are supplied on the lowest terms. Price Lists forwarded on application.

CUMBERLAND'S FERRIOXIDE PAINT should be used by Builders, Engineers, Ship Painters, Contractors, and all who are interested in preserving Iron, Wood, Stone, or Canvas. For ironwork there is nothing equal to it. Its preservative and anti-corrosive properties render it universally applicable. It possesses a rich advancing colour (a rich dark red), and, the greatest recommendation of all, cheapness.
PRICE 20s. PER CWT. Samples sent if required.
MANUFACTURED SOLELY BY
HENRY CUMBERLAND,
CHEMICAL WORKS, MILLWALL, LONDON, E.

Delivered to Vessels in the Dock alongside the Kilns, in the River Medway.
Pattern Sheets, and all information, may be had of
R. LANGLEY, Agent, East Cowes-park, Isle of Wight.

TO BRICKMAKERS.—All Parties who
BURN BRICKS in CLAMPS are Invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks and red bricks from 35 to 40 and 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

LITTLE, Great Western Railway, Windsor.

HYDRAULIC LIME and ROMAN
CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom either in lump (loose), or ground, and in barrels and bags. The Limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference Apply at the Works; or to E. & W. AARON, Agents, 68, South John-street, Liverpool.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London Atmosphere.
ADULTERATIONS. Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.
By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S PALACE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.
And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at which it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing, and used for Model Farms at the Royal Agricultural Society's House in Hanover-square. Its advantages are lightness, warmth, cleanliness, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use and the best mode of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c., is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works were the above roofing is made are F. McNEILL & Co.'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

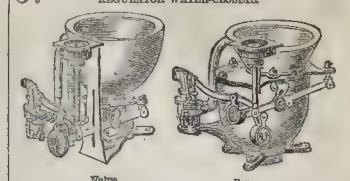
CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 10 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.



CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c and

AMWELL HOUSE, situate close to the Town of Ware, in the County of Herts

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE at the MART, on FRIDAY, JUNE 17, at TWELVE, a very valuable FREEHOLD FROTEHOLD Land Investment, situate in the parish of Great Amwell, close to the town of Ware and the railway station, in a picturesque part of the county of Herts. It comprises Amwell-House, a roomy commodious residence of the Elizabethan Amwell period, replete with every convenience for a large family or public establishment; coach houses, stabling, and offices; beautiful pleasure grounds, kitchen garden, and orchard, well stocked with fine old timber, and intersected by dry gravelled shrubbery walks, leading to an exceeding various grotto, constructed in the year 1763, with subterraneous passages, and a cascade under the plantation, the walls decorated with choice specimens of shells and stones, forming an object of rural resort interest for many miles round, and to an unrivalled summit on one place on high ground, commanding beautiful and extensive views of the surrounding country; fishpond, and rich park-like meadow land, of an undulating character, offering eligible sites for erection of villa residences, the whole containing about 29 acres, and presenting an unusually favourable opportunity for a profitable building speculation, independent of the occupation of the mansion and ornamental pleasure ground. In hand, and possession will be given on completion of the purchase. To be viewed by cards only. Particulars, with plans, may shortly be had at the Saracen's Head Inn, Ware; Buttress of Messrs. NORTON, HOGGART, & ROBERT TOLLER, Land Agent, Totteridge; Messrs JONES, FRANCIS, & BOSANQUET Solicitors, 22, Austinfriars, E.C.; at the MART; and [as] [a] cards to view of Messrs. NORTON, HOGGART, & TRIST, 62, O d Broad-street, Royal Exchange, E.C.

PIMLICO.—To Builders, Material Buyers, and Others. Important Sale of Super or Building Materials, to be cleared away for the projected Improvements of the Estate.

MR. GEO. HAINES announces for SALE by AUCTION, on the PREMISES, on WEDNESDAY, THURSDAY, and MONDAY, JUNE 15th, 16th, and 20th, at TWELVE o'clock, all the very excellent MATERIALS of Nine Spacious Family Residences, with back buildings, Nos. 1 to 9, Lower Belgrave-place, facing the Royal Barracks, comprising 2,000 0 of prime stock bricks, several tons of lead, verandahs, glazed and other roofs; sound internal fittings of the numerous large rooms with internal shutters, doors, and sashes, and many stained and moulded cornices, stone staircases, and pavement of halls; fixtures and appendages.—May be viewed. Catalogues of Messrs HAINES & SON, Montpelier-street, City; and at the Auction Offices, Grosvenor street West; and No. 12, High-street Kensington

CITY IMPROVEMENTS.—To Paperstainers, Plant-brokers, Builders Slaters, and Others. Private unreserved Sale in consequence of the Premises being required for the Great Broad Street Station

MR EDWIN WHITE is directed by Messrs. Williams Coopers, & Co. (who are relinquishing the business) to SELL by AUCTION, without reserve, at the FACTORY, No. 85, Wardour-street, on WEDNESDAY, JUNE 8, and two following days, at TWELVE each day, the excellent PAPERSTAINING PLANT and STOCK IN TRADE of PAPERHANGINGS, comprising printing, cutting, sticking, grinding, and other machinery, 7,000 printing-blocks, 40 reels for paper, and decorations of latest large elephant folios and sizes, satin and body grounds, two useful horses, harness, 15,000 pieces of paper, including decorations, borders, and corners, block, gable, satin, grounds, lincs, friezes, and sundries.—May be viewed on TUESDAY and morning of sale, when catalogues may be had on the Premises, 85, London-wall, and of the Auctioneer, 12 Holborn-bars and 1, Castle-street, Holborn, E.C.

NEW SOUTHSEA, HANTS.—Valuable Freehold Estate, with Building Ground, close to Havelock Park.

MESSRS. PRICE & CLARK are instructed to SELL by AUCTION, at GARRAWAY'S Coffee House, Change-alley, Cornhill, on TUESDAY, JULY 5, at TWELVE for ONE o'clock, the important FREEHOLD ESTATE known as Frodsington, New Southsea, comprising a capital and substantially-built family residence, with lofty entrance hall, gardener's lodge, and grounds, the whole extending about eight acres, and well adapted for the formation of a public institution, or for a good building site. The property adjoins Havelock Park, and is near to St. Bartholomew's Church and the newly erected beautiful residences in that locality. The surrounding property is rapidly rising in value and the capabilities of this portion of estate as a building site are highly favorable, offering an advantageous opportunity to capitalists, builders, and others to form a good and profitable investment. The property may be viewed, and the sale by application to Mr. CARLILE, 7, Union street, Portsea; and particulars with plans may be had 14 days preceding the Sale of Messrs. HELIARD & SON, Solicitors Portsmouth; and in London at GARRAWAY'S, and the Offices of PRICE & CLARK, 48, Chancery-lane.

LEREW & LEREW will SELL by AUCTION, on the PREMISES, Camden terrace, Camden Town, on MONDAY, JUNE 13th, at TWELVE precisely, 1,850 Yards White and Pine PLANKS, DEALS, and BATTENS; 3,500 feet wide Pine Board, 180 squares prepared Flooring, 12,000 feet seantling, quantity of dry cut stuff, mouldings, mahogany, birch, cedar; 130 deals pipes, paving, 25 marble chimney-pieces, 16 ladders, 24 doors, and useful materials.—Auction Offices, 2, Cardington-street, Hampstead-road, N.W.

STRATFORD.—WARD'S WHARF, NARROW BRIDGE To Contractors, Builders, Manufacturing Chemists, and Others, without the least reserve

J. G. PREVOST & CO. will SELL by AUCTION, on WEDNESDAY next, JUNE 8, 1864, at TWO o'clock precisely, on the PREMISES as above (by order of the Proprietor, retiring from business), the STOCK of a TILE and DRAIN-PIPE MAKER comprising terra-cotta chimney-pots, gas lamps, traps, drain pipes, bends, junctions, and syphons, garden tiles, chest traps and pans, receivers, stilt-bevels and connexions carbury stoppers, and useful effects.—On view the day previous to sale; and catalogues of the Auctioneers, 176, Mile-end road.

NORWOOD JUNCTION.—Eligible Plot of Freehold Building Land.

MESSRS. EDWIN FOX & BOUSFIELD are instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on WEDNESDAY, JUNE 8, at TWELVE for ONE o'clock, a valuable PLOT of FREEHOLD BUILDING LAND, with a commanding frontage of 160 feet to the Selhurst-road and extending to a depth of about 300 feet, within an easy distance of Norwood Junction and East and West Croydon Stations, available for the erection of eight villa residences. May be viewed, and particulars had of E. MOIE, Esq. Solicitor, 13, Warwick-court, Gray's-inn; at the Mart; and of Messrs. EDWIN FOX & BOUSFIELD, 41, Coleman-street, E.C.

Various Plots of FREEHOLD BUILDING LAND, at Camberwell Surrey.—By

MR. VIGERS, at GARRAWAY'S COFFEE HOUSE, Change alley, Cornhill, on TUESDAY, JUNE 14, at TWELVE for ONE precisely, in lots, by order of the Directors of the London, Chatham, and Dover Railway Company, viz., a PLOT of FREEHOLD BUILDING LAND, in the Denmark road, close to the Camberwell Station, with frontage of 200 feet, and an average depth of 200 feet; a Piece of Freehold Building Land, with a frontage to the Camberwell road of 26 feet, and a depth of 198 feet; also a very valuable Enclosure of Freehold Land, in the rear of Grosvenor place, Camberwell, containing 42,220 feet superficial, suitable for the erection of an extensive factory, or for small houses, which are much required in the locality.—Particulars and conditions of sale may be obtained of Messrs. FRESHFIELD & NEWMAN, 5, Bank buildings; or of Mr. VIGERS, Land Agent and Surveyor, 3, Frederick's-place, Old Jewry, E.C.

WITHOUT RESERVE.—FREEHOLD.—A really sound Family Built, well fitted semi-detached DWELLING-HOUSE, with nine rooms, good garden, rent 36l. with possession.—No. 2, Alpha Cottages, James-street, Old Kent-road; also a PLOT of GROUND, 18l. by 70 feet, adjoining, suited for a builder or trausesman desiring a group of factory or workshops.

MESSRS. TEBB, BROTHERS, will SELL at the above at the AUCTION MART, on WEDNESDAY, JUNE 8th, at ONE o'clock, in TWO LOTS.—Particulars on the premises; at the Mart; and of the Auctioneers, No. 3, Adelaide-place, London, E.C.

IMPORTANT CITY FREEHOLD, comprising the Spread Eagle Hotel, Gracechurch-street, with extensive Premises and Yard, containing an area of nearly 6,000 square feet, adapted for any tavern resorting

CHINNOCK, GALSWORTHY, & CHINNOCK are instructed to SELL by AUCTION, at the MART, near the Bank of England, on WEDNESDAY, JUNE 29, at TWELVE (unless previously disposed of by private contract), valuable FREEHOLD PROPERTY, situate in the very heart of the City, where all the chief commercial interests of London now being centered: comprising the principal portion of the well-known establishment the Spread Eagle, Gracechurch-street, with extensive premises and yard, having a back entrance to Leadenhall Market; the whole containing an area of nearly 6,000 square feet, and forming one of the most important building sites to be found in the City, its admirable position rendering it admirably adapted for rebuilding as offices, whereby a very large rental may be created, thus offering a desirable opportunity to the employer. Particulars may be obtained of CLARKE, WOOD, & LUCAS, Esqs. Solicitor, 59, Fenchurch-street; of Messrs WALES & SPARKS, Surveyors, 8, Great St. Helen's, E.C.; at the Mart; and Messrs. CHINNOCK, GALSWORTHY, & CHINNOCK, Land Agents and Surveyors, 11, Waterloo-place, Pall-mall

GARRICK VILLA, HAMPTON, formerly the residence of the celebrated David Garrick, with its beautiful pleasure-grounds and extensive lawn, terracing the river Thames, kitchen-garden and paddock, altogether between 11 and 12 acres of which immediate possession may be had; also an Eyot in the river Thames, within a short distance, containing about 4½ acres, let to Mr. Tagg at 25l. per annum

MESSRS. RUSHWORTH, JARVIS, & ABBOTT are instructed by the Executors of the late owner Silvanus Phillips, Esq. to SELL by AUCTION, at the MART, on FRIDAY, JUNE 17th, the above very interesting and valuable FREEHOLD ESTATE, which is situate on a beautiful wide part of the Thames known as the Hampton Deeps (a great preserve for fish), close to the picturesque village and church of Hampton, and the Surrey to Montserrat and Hampton race course, partly bounded by Bushy Park, and is within a mile of the Palace and gardens of Hampton Court, and the railway station, and only a few hundred yards distant from the Thames Valley branch line to Hampton, rendering the property accessible both from the City and west end of the metropolis in three-quarters of an hour. The residence is therefore suitable for any gentleman whose avocations require frequent or even daily attendance in town, and it affords every accommodation for a family, with capital stabling and other offices. The property is intersected by the main road leading from Hampton Court to Sunbury, occupying a frontage thereto, on either side, of 530 feet and 500 feet respectively, besides frontages in the villages, and a frontage of 350 feet to the river Thames; which combined with its beautiful situation, great variety of soil, picturesque church, and easy communication with the metropolis renders worthy the attention of capitalists and builders. Possession will be sold the eyot in the river Thames, above referred to. Cards of view may be obtained of Messrs. HOLLAND & SONS, Upholsterers, 31, Mount-street, Grosvenor-square, W.; and at the Offices of Messrs. RUSHWORTH, JARVIS, & ABBOTT, Land Surveyors and Auctioneers, Saville-row, W and 13, Change-alley, E.C.; and without which no person will be admitted. Printed Particulars may likewise be had as above, and of Messrs. COTTERILL & SONS, Solicitors, Throgmorton street, E.C.

FREEHOLD LAND, BATTERSEA, SURREY, close to the New Park, and giving Votes for the County.

GEO. TODD will SELL by AUCTION, on TUESDAY, 7th JUNE, 1864 at the AUCTION MART, opposite the Bank of England, at TWELVE o'clock precisely, in EIGHT LOTS, a valuable PLOT of FREEHOLD BUILDING LAND, situate in the Bridge road and Park-road, close to the New Park. Also FREEHOLD HOUSES in the main road, which might be converted into shops. The GROUND-RENT of 45l. per week.—Plans and particulars may be had of Messrs. H. & F. CHESTER, Solicitors, 1, Church-row, Newington Butts, and at the Auctioneer's Office, Battersea Bridge-road, Battersea Park, S.W.

CROYDON, SURREY.—First class Freehold Building Land in charming and picturesque locality, being part of the Haling-park Estate

MESSRS. BLAKE will SELL by AUCTION, at GARRAWAY'S COFFEEHOUSE, Change-alley, Cornhill, on TUESDAY, JUNE 21, at TWELVE o'clock, highly valuable FREEHOLD SITES, of about half an acre each, having a frontage approached by a capital private road, 50 feet wide, with lodge entrance, lying in an elevated position, commanding beautiful views, and forming one of the most desirable sites that could be found in the neighbourhood for the erection of superior residences, and in order to secure a greater possibility of the character of the neighbourhood being preserved, the purchaser will be restricted from building more than two private houses. Gas and water mains and sewers are already laid in the road. The terminus of the South Croydon Railway, which is now in course of construction, will be within a few minutes' walk of the land, and the Waddon and East and West Croydon Stations are within easy distances of it.—Particulars, with plans, may be had four weeks previous to the Sale at Garraway's Coffee-house, Change-alley; of Messrs CURREY & HOLLAND, Solicitors, 9, Old Bullstrake, London; and of Messrs. BLAKE, Croydon.

ROYAL POLYTECHNIC.—Patron H.R.H. the PRINCE of WALES.—The Christian Allegory of "The Spirit of Peace"—The Ghost of the Diving Bell, Henke's patent diving dress—The Lilliputian Ghost, a few inches high, in Professor Pepper's New Ghost Lecture Entertainment, JOHN HENRY PEPPER and HENRY DIRCK (joint inventors). SALE of REGISTER GRATES.—In consequence of the great demand for Messrs. BROWN & GREEN'S PRIZE MEDAL KITCHEN RANGES, and the HOT-WATER BATH, and STEAM APPARATUS, in connexion with them, it is found impossible any longer to devote space for a Stock of Register Grates at the London warehouse. These now on hand have therefore been marked off at or below cost price, in order to effect an immediate clearance. FREDERICK THOMAS.
72-74, Bishopsgate-street Within, June 2, 1864.

COMPETITIONS.

TO ARCHITECTS.—The Local Board of Health for the Hartlepool District are desirous of obtaining Plans, Elevations, Specifications, and Estimates for a COVERED MARKET, POLICE STATION, and OFFICES, to be erected upon a plot of ground in Middleton-street, Hartlepool. A premium of £25 will be paid by the Local Board for the plan and estimate selected by them, and a further sum of £5 will be paid to the successful competitor, on condition that he furnishes a detailed specification for the proposed works, such plan, estimate, and specification to become the property of the Local Board. The whole expense of the erections not to exceed 3,500l. The Board do not bind themselves to employ the architect whose plan may obtain the premium. A plan of the ground and printed particulars can be obtained on application to the Borough Surveyor. All drawings to be on a scale of not less than 8 feet to the inch, and to be sent under motto, with sealed names (carriage free), addressed to the Borough Surveyor, King-street, Hartlepool, and endorsed "Market Plan," on or before the 18th day of JUNE next.—By order, F. G. MORRIS, Borough Surveyor.
May 13, 1864.

TO ARCHITECTS.—The Trustees of the Deal Wesleyan Chapel are prepared to receive PLANS and ESTIMATES for the ERECTION of a New CHAPEL, in Queen-street, Deal.—For plans of site and printed conditions, apply by letter to the Secretary, No. 1, Albert-terrace, Deal
HENRY PAGE, Secretary.

CONTRACTS.

WAR DEPARTMENT CONTRACTS.—NOTICE to BUILDERS.—TENDERS are required for ERECTING a WOODEN GYMNASIUM 100 feet by 40 feet, and Removing a Coal-yard, at Winchester-barracks. Parties desiring to Tender for the execution of these Works must leave their names at this Office on or before the 14th day of JUNE, 1864, and pay the sum of 10s. 6d. for the Bills of Quantities.
The Secretary of State does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, Portsmouth, 1st June, 1864.

TO CONTRACTORS. — The Tottenham Local Board of Health are prepared to receive TENDERS for the GETTING OUT, SHORING UP, and FILLING IN certain PIPE TRENCHES, forming Contract No. 1, for the Wood Green Drainage. Plans, sections, and specification may be seen at the Offices of the Board, on and after MONDAY next, the 6th of JUNE. The Tenders shall be sealed, and addressed, "Tenders No. 1 Contract, Wood Green Drainage," and delivered at the Offices of the Local Board of Health, Tottenham High Cross, N. on or before FRIDAY, the 17th day of JUNE, at TWELVE o'clock. The Board do not bind themselves to accept the lowest or any Tender. Copy of specification and form of Tender, 10s. each.—By order.

CORPORATION of MANCHESTER.—To EXCAVATORS and CONTRACTORS.—The Waterworks Committee is prepared to receive TENDERS for EXCAVATING a PIPE TRENCH for the New 30-inch MAIN from the Corporation Reservoir at Godley, to the intended Reservoir on Prestwich Hills. The work will be divided into three Contracts, of a length of about five miles each; and parties are at liberty to Tender for one or all of such Contracts.—Plans may be seen, and copies of the specification obtained, on application at the City Surveyor's Office, in the Town-hall, Manchester, on and after MONDAY next, the 30th inst. Trial holes will be made on the line of trench, and may be inspected on WEDNESDAY and THURSDAY, the 8th and 9th of JUNE next. Tenders addressed to the Chairman of the Waterworks Committee, endorsed "Tender for Pipe Trench," must be delivered at the Town hall, Manchester, before TEN o'clock in the forenoon of WEDNESDAY, the 15th JUNE next. The Corporation do not bind themselves to accept the lowest or any Tender.—By order,
JOSEPH HERON, Town Clerk.
Town-hall, Manchester, 26th May, 1864.

TO SEWER CONTRACTORS.—The Vestry of the Parish of Bermondsey, Surrey, will meet at the Parochial Offices, Russell street, on MONDAY, the 20th JUNE, 1864, at SIX o'clock in the evening precisely, to receive sealed TENDERS, for the CONSTRUCTION of about 3,070 feet in length of BRICK SEWERS, 4 feet 6 inches by 3 feet, and of about 1,740 feet in length of BRICK SEWER, 3 feet 9 inches by 2 feet 6 inches, and other works connected therewith, in the Blue Anchor-road, St James's road, and Drummond road, Bermondsey. The plans and specification of the proposed works, with the draft contract and bond, may be inspected and particulars obtained, on application to Mr. GEORGE ELKINGTON, Surveyor to the Vestry, at the Vestry Offices in Maltby-street, daily, after the 6th instant, between TEN and FOUR o'clock.—The person whose Tender may be accepted will be required to enter into a contract and bond, with two sufficient sureties, for the due performance of the works. The Vestry do not bind themselves to accept the lowest or any Tender. GEO. H. DREW, Clerk.
Vestry Office, Maltby-street, S.E. June 1, 1864.

TO BUILDERS. — Parties desirous of CONTRACTING for the ERECTION and COMPLETION of ST JOHN'S CHURCH, Carlisle, may see the plans and specifications, and obtain bills of quantities, at the Office of JOHN NANSON, Esq. Solicitor, 75, Castle-street, Carlisle; or at the Offices of the Architect, Journal-chambers, Nottingham.—Plans, &c. may be seen on and after MONDAY, JUNE 6th. Contracts to be delivered at the above Office, in Carlisle, endorsed "Tenders for St. John's Church, Carlisle," on or before JUNE 22nd inst. The Committee do not bind themselves to accept the lowest Tender.
ROBT. CLARKE, Architect, Nottingham

CLARK & CO.
SOLE PATENTEES
OF
SELF-COILING SHUTTERS,
Which do not require Balance Weights or Machinery of any description,

Thousands of which are in daily use, being worked by Hand with the greatest facility. The WOOD SHUTTERS are lined with Steel Bands, affording every security. The STEEL SHUTTERS are in

ONE SHEET,

and from the hardness of material, and their construction, will defy the efforts of the most experienced Burglar, and afford an effectual protection against Fire.

THESE SHUTTERS RECEIVED
THE ONLY PRIZE
AWARDED AT THE
GREAT EXHIBITION, 1862.

Nine of CLARK'S Patent Self-coiling Steel Shutters have been fixed at MESSRS. MORLEY'S new Premises in Wood-street, the scene of the late

GREAT FIRE IN THE CITY,

the Revolving Shutters previously fixed having been removed.

Messrs. CLARK & COMPY. are erecting Shutters of immense size at the

THEATRE ROYAL, GLASGOW,

which was recently destroyed by Fire, as a safeguard for the future.

Their Shutters are also in daily use at all the principal Banks, Jewellers' Shops, Public Offices, Theatres, and Music Halls, in the United Kingdom. Testimonials of their great efficiency and ease in action received from many eminent Firms and Government Offices forwarded free, also Prospectuses, Estimates, and every information.

FIRE-PROOF CONSTRUCTION.
FOX & BARRETT'S PATENT

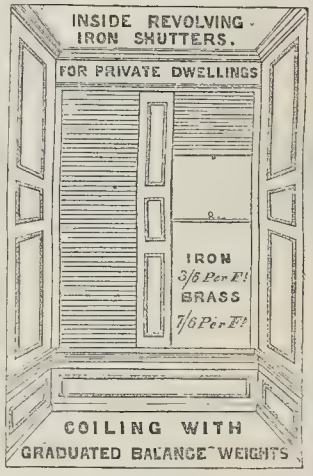
This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of enormous size with ribs of iron, the structure possessing great strength and rigidity, and forming a fire proof foundation, adapted to receive a finished surface, either of the ordinary flooring planks, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in the course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,



MR. BARRETT,
12, YORK BUILDINGS, ADELPHI.

CANNON IRON FOUNDRY,
156, GOSWELL ROAD, LONDON, E.C.
JONES & BLAXTON,

Having made great ADDITIONS to their STOCK of PATTERNS, beg to inform the trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Palisading, Window Guards Verandahs, Staircases, Tomb Railings, Lamp Irons, Gas Pillars, Curtain Rods, Sashes, Panels, Balusters, Newels, Wheels, Gratings, and Castings of every description.
STOVES, RANGES, RAIN WATER GOODS, SASH-WEIGHTS, AND FURNACE WORK, &c. &c.

NEW IRON WAREHOUSE.

WHOLESALE TERMS TO THE TRADE.

ROYAL ARCADE, 534, NEW OXFORD STREET, LONDON, W.C.

BATTY & STEVEN,

VENTILATING ENGINEERS,

Beg to intimate that they are prepared to undertake the **Heating and Ventilating of Public and Private Buildings, Hot Houses, &c.**—Fitting up with Stoves, Cooking, and Hot-water Apparatus, Baths, &c.

Curing Smoky Chimneys and Flues,—Consuming Smoke in Furnaces,—Ventilating Ships,—Tunnels,—Sewers, &c.

Altering the DEFECTIVE WORK OF OTHERS (as has been Mr. BATTY'S practice during the last Fifteen Years).

They invite attention to their NEW STOCK OF STOVES—COOKING RANGES—HOT WATER AND RAIN WATER PIPES—STABLE AND GARDEN FURNISHINGS—RAILINGS, &c. and especially to the following **PATENTED IMPROVEMENTS,** viz.:

THE VENTILATING FIRE GRATE, which acts by admitting into the room fresh air moderately warmed in a chamber at the back, and removing the vitiated air. Grates of all qualities can be constructed on this principle.—(*Favourably mentioned at the Meeting, 2nd March, 1863, of the Royal Institute of British Architects, and reported in the Annual Paper.*)

A NEW COOKING RANGE—dispensing with the Close Fire Door, besides having the following advantages:—

1. A strong Roasting Fire.
2. New arrangement for supplying air to the fire, thereby increasing the heat of the *Hob-plate* for stewing and boiling.
3. An improved mode of constructing and heating the boiler.
4. Superior Ovens for roasting or baking at pleasure.
5. Consuming the smoke,—preventing the accumulation of soot in the flues,—and economising fuel.
6. Removing the smell of cooking from the kitchen.

THE POOR MAN'S COOKING GRATE, having a roasting Fire—a roasting Oven—a Boiler and Flue attached, for increasing the heat of the Oven, Boiler, and Hob-plate, as required. By these means a smaller amount of fuel will give results superior to any other Cooking Stove now in use.

THE WARM AIR PAGODA OR RADIATING STOVE, having the *currents directed outwards*, so that immediately over the Apparatus the air is comparatively cool, while at a distance it is warmer than by any other construction of Stove, thereby being capable of equalizing in a superior manner the temperature of *Churches, Halls, Shops, &c.*

A SELF-ACTING VENTILATOR FOR ROOMS—placed between joists and ceiling—removing effectually the vitiated air.

THE PYRAMID CHIMNEY HEAD, preventing Chimneys from smoking, and down-draughts.

A visit to the Premises will repay those who appreciate such improvements.

DRAUGHTLESS VENTILATION INFALLIBLY SECURED BY

BOYLE'S PATENT DOUBLE LEVEL WINDOW VENTILATORS.

COMYN, CHING, & CO.

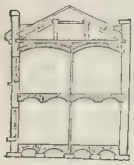
EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.



MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES, MUSGRAVE'S PATENT IRON COW STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were adopted by each of the architects of all the work of their class in the Exhibition. They can be seen in first-class stables in almost every county in England and MUSGRAVE, BROTHERS, are now putting several very large establishments under the direction of London Architects, noted for adopting only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 21, Spring Gardens London."

NOTICE TO ARCHITECTS AND THE TRADE.

WEST-END BRANCH, EGYPTIAN HALL, PICCADILLY.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTURERS OF

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,

Invisible effected.—T. BOYLE, Lighting, Warming, and Ventilating Engineer, 25, Little St. Andrew-street, Upper St. Martin's lane, London.

THE FURNISHING OF BED-ROOMS.

HEAL & SON

have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed room Furniture than is usually displayed, and that to judge properly of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.

Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.

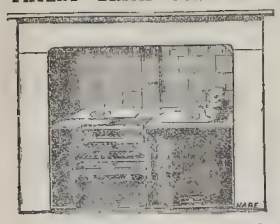
The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They particularly call attention to their Patent Spring Mattress, the Sommier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed room Furniture sent free by Post.—196, 197, 198, Tottenham-court road, London.



HENDERSON'S PATENT DERRICK CRANE.

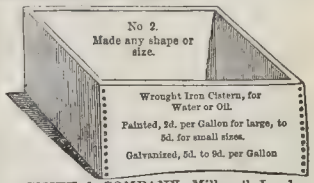
TO BUILDERS, JOINERS, CONTRACTORS, &c.



THE "GENERAL JOINER."

SAMUEL WORSSAM & CO. having long felt the importance of introducing a LABOUR-SAVING MACHINE, which by combining several operations at a moderate cost, should meet the requirements of builders and others engaged in the conversion of timber, beg to offer for this purpose their "General Joiner" as above, which in its present greatly improved form will, with 2 horse power, do the work of at least fifteen skilled joiners, in SAWING, CROSS-CUTTING, and SQUARING, PLANING, and THICKNESSING, MORTISING, TENONING, GROOVING, TONGUEING, RABBETTING, BORING, BEADING, MOULDING, CHAMFERING, &c. &c.—For priced illustrated circulars, apply to S. WORSSAM & CO. saw-Mill Engineers, King's-road, Chelsea (sole manufacturers), where the "General Joiner," and samples of the work may be seen.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

WINDOW-BLIND MATERIALS.—H. & J. DOVE, 31, Ludgate-hill, London, E.C. SUPPLY the TRADE with every description of MATERIAL for INSIDE and OUTSIDE WINDOW-BLINDS, comprising Sun Blind Ticks, Linen Hollands; Buff, Green, and White Unions; Green, Crimson, and Blue Tammies; Fancy Printed Blinds; Cords, Tassels, and all kinds of Webs and Lines for Venetian Blinds; also every quality of Patent Sash Lines.—Price lists on application. Established A.D. 1787.

always to choose from.

PRICE LIST ON APPLICATION.

MARBLE BOX CHIMNEY PIECE
for £1 5s.
First-class Bed-room ditto, £1 10s.

FIRST-CLASS
TRUSS MARBLE CHIMNEY PIECES
from £2 5s. to £3 5s.

A WELL-CARVED
STATUARY CHIMNEY PIECE,
with 13½-inch Piers,
suitable for a Drawing-room, which must be seen to be believed,
FOR THE SUM OF £6.
Net Prompt Cash.
PRICE LIST ON APPLICATION.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.
DESIGNS MADE FOR ANY WORKS.
LITHOGRAPHED DESIGNS OF CEILING FLOWERS, &c. SENT FREE ON APPLICATION.

VOL. XXII.—No. 1114.

Stained Glass and Painted Windows: Glasgow and London.

ANY comments have been made in England from time to time on the proceedings of the committee who undertook the task of filling the windows of Glasgow Cathedral with stained and painted glass, and on the results which have gradually become evident, — comments, for the most part, depreciatory. Very few persons, however, seem to know the magnitude of this remarkable undertaking, or rightly to understand the feelings which influence people in Scotland in such matters, and the consequent position of the committee who are carying it out.

This is the first time since the Reformation and the destruction of all works of art in ecclesiastical buildings, that art has been admitted within a Scottish church on any but a very trifling scale. The committee, therefore, had a task to perform of a very delicate nature. Anything resembling the imitations of Mediæval modes of representation in glass-painting usual in England would have been regarded either as intolerable or as ridiculous, and would not have been endured. Those, and there are now many, friendly to the introduction of art into Scottish churches could only be conciliated by the erection of works beautiful in themselves; and, to obtain such at a cost within their means, was the task set the committee.

Mr. Charles Heath Wilson, who has acted with the committee from the commencement of the work, now about eight years ago, has recently published a Memoir showing how conscientiously the committee, whether right or wrong in its views, set about its duties, and that it spared neither labour nor expense in its endeavours to perform those duties satisfactorily. As we glean from the Memoir, the principal duty imposed upon the members of the committee was to expend the funds placed in their hands, after due inquiry, in selecting the finest works of art procurable. They could not, in the exercise of the functions with which they were entrusted, make novel experiments, and endeavour to promote a union between the eminent artist of this country and the practical glass-painter which does not at present exist. After a careful examination of numerous works by practical glass-painters in many churches, having decided against the choice of similar works, and having searched in vain for instances of windows of modern date in which the desired union existed, they were compelled to look elsewhere. There was at that time only one example in Great Britain of a really fine work of art in glass designed expressly by a modern British artist of distinction. This window was carefully examined and admired, as it deserves; but whilst it was designed in England, it was executed on glass at Munich. It therefore could not be considered an example of British art for the guidance of the committee of the Glasgow windows. It was also ascertained that the cartoon of that window cost 500*l.*, altogether apart from the glass, which was separately contracted for. It was out of the question to contemplate such a scale of price as this: it would have doubled the cost of the cathedral windows. Further, the window in question was a solitary instance of so great a work on which a distinguished British artist had been employed; but if the Glasgow windows were to be executed within a reasonable time, not one, but many, artists were required: ten artists have actually been employed, of whom six at least enjoy a European reputation. But, besides the advantage of obtaining the aid of so many artists of eminence (we are still using the arguments of the committee, and they are not weak ones), there existed at Munich a great organization by which they and the executants of their designs, the glass-painters, could be brought into complete and harmonious relationship. The advantages of this state of things must be obvious. Could the committee undertake to bring into such an intimate relationship artists and executants in this country for the first time, dealing of necessity separately with each? Had such a combination been possible, it is obvious that they must have delegated their functions to some one as practical director, capable of organizing and directing such a scheme. In fact, they could hardly have stopped short of organizing a great glass-painting establishment on the same principles as those carried out in practice at Munich,—with its Director, the Professor of Fine Art in the Royal Academy; its Inspector, the Chevalier Maximilian Ainmiller, Architectural Painter; and its Instructor in Technical Processes, the artist Leonhard Faustner.

The three most eminent artists employed in designing for the Glasgow Cathedral windows are Heinrich Von Hess, from whose cartoons the north transept window was executed; Moritz Von Schwinde, who prepared the designs for the great west window and the great south window; and Johann Von Schraudolph, who is the author of the east window. Several windows of the aisles have been designed by George Fortner, an artist of experience as a designer for glass-painting, and author of several windows for the Cathedrals of Cologne, Ratisbon, and Basle. Alexander Strähuber, a designer of religious subjects, is the author of some of the best windows in the cathedral. The Professor Siebertz, Franz Fries, a pupil and follower of the artist Kaulback, and Henry Ainmiller, have also contributed important designs. The Chevalier Maximilian Ainmiller, Inspector of the Glass-painting Establishment at Munich, and an architectural painter of some note, acted as the practical chief of this staff of designers, and watched over the production of their designs on glass by the three artists and glass-painters, Leonhard Faustner, Heinrich Burkhardt, and Theodosius Mayr, who are not glass-painters only: they are all educated artists, and the two first are known as enamel-painters. The business part of the Glasgow committee's duties, we learn, has all been transacted with one of these gentlemen; it has been unnecessary to enter into correspondence with the different artists, or to enter into any transactions except with one person, the Chevalier Maximilian Ainmiller. Men of business will, of course, estimate the value of this fact. It is but just to add that all has been transacted with a regularity, a correctness, and a promptitude beyond all praise: not a difficulty having occurred.

The works in Glasgow Cathedral, whether right or wrong in principle, and admitting them in some cases to be weak and sickly in colour, as we are forced to do, are emphatically works of fine art. Such men as Von Hess, Von Schraudolph, and Von Schwinde could produce no other; and the Prophets, by Hess, in this cathedral, are amongst his noblest designs. The windows have the defects which arise from the use of the modern too pellucid glass, too positive in its colour; but the unprejudiced judge of glass-painting must recognise the skill with which these colours are harmonized, and the knowledge of the resources of the art which the windows display.

It is intended to carry out the clerestory windows on the same plan, and by the same artists, when the entire number will be as follows:—

Nave.

The Great West Window	Von Schwinde.	
The Great North Window	Von Hess.	
The Great South Window	Von Schwinde.	
North side—Triplets	7	in number.
,, Couplets	3	,,
South side—Triplets	7	,,
,, Couplets	2	,,
West end—Couplets	2	,,

Choir.

North side—Triplets	5	,,
,, Couplet	1	,,
South side—Triplets	5	,,
,, Couplets	2	,,
East end—Great Window ...	Von Schraudolph.	
,, Lancets	8	in number.

Giving a total of 46.

The Clerestory will comprise—

Nave—Couplets	32	in number.
Transepts—Triplets	4	,,
The Choir—Triplets	10	,,

Making 46, and in all 92. Of these, 46 are completed, but 3 of them are not yet erected. Of the upper 46, 6 are ordered.

The total expenditure will be about 19,000*l.*, if all are finished. The present expenditure has not, however, yet been made up, and the above sum is only to be regarded as a general statement.

We have examined these windows with care during their progress, and are willing to say that, looked at from their own point of view, no such work, so skilful and conscientious, has been produced in modern times in this country. We should be very sorry to see all our buildings filled with Munich glass; but we are glad indeed to have in this country such a complete exposition of what the school can do,—the productions of working artists, and not mere products of imitative manufacturers. In a country where such a scheme as this had not been thought of for centuries, it is a most liberal beginning, and is not without magnificence as contrasted with even English restorations. Let us give all due credit to those who have been concerned in it, which will certainly include Mr. C. H. Wilson.

For the English metropolitan cathedral the glass, as our readers know, is to be executed in Munich. We hear that two designs,—one for the east window (the central of the lower range), the other for the west window, the gifts respectively of the Drapers' Company and Mr. Brown,—have been received by the committee from Mr. Julius Schnorr, Dresden, and have been approved. The subjects are,—"The Crucifixion," and "The Conversion of St. Paul." The figures, when executed, will measure 6 feet in height, thus giving a scale for measuring the proportions of the edifice. In both windows full-length portraits of the donors are introduced kneeling reverentially. The architectural accessories and ornaments of these windows have been designed by the surveyor of the cathedral.

The proposed annual exhibition of modern stained glass in the South Kensington Museum is calculated to produce good effects, by enabling artists and manufacturers to compare their works, making deficiencies and errors obvious, and leading to a generous competition. The collection now on view includes specimens from nearly all who are at this time supplying the demand,—Messrs. O'Connor & Son; Clayton & Bell; Morris, Marshall, & Co.; Powell & Sons; Hardman & Co.; Ward & Hughes; Butler, Heaton, & Bayne (several); Chance; Edmundson & Co.; Holland & Son; Bell, Bristol; W. Connell; Field & Allan; J. T. Lyon; Forest, Liverpool; Lavers

& Barraud, &c. We observed nothing, however, from Mr. Wailes or Mr. Willement.

We are not able to confess to any great pleasure derived from an examination of the specimens, though the examination has been made several times, under different circumstances as to light; and we abandon the intention we had of bringing forward each work in review. The mass of the work is of the merest imitative manufacture, and would provoke expressions that might, in our pages, damage commercially to an extent of which we are unwilling to take the responsibility.

There is less of *purposely* bad drawing than would have been apparent a few years ago (Messrs. Hardman, however, appear to be still persistent in this mistaken course); and the improvements made by Messrs. Powell in the *manufacture* of glass for the purpose are evident in more than their own specimen, though not made available to the extent they might be. The great fault in some of the works, which might be praised in other respects, is the heaviness and garishness of the colours. Reds, blues, and greens, in unmitigated brilliancy, and most violent contrast, fill the whole opening: there is a want of toning, a *want of white*. One natural result is, that the corridors in which the windows are fitted up are made so dark that the other objects they contain can only be insufficiently seen. We must except from this particular objection, or we should be unjust, the works sent by Messrs. Clayton & Bell, and Messrs. Morris, Marshall, & Co., which prove in a most conclusive manner the value of a contrary course.

THE WEDGWOOD MEMORIAL INSTITUTE AND "CERAMIC ARCHITECTURE."

THE ARCHITECTURAL EXHIBITION.

ABOUT twelve months ago, Messrs. Beresford Hope, J. E. Heathcote, and J. Edge, and the Rev. Dr. Armstrong, placed in the hands of the committee of the Wedgwood Memorial Institute, then about to be erected at Burslem, from the design of Mr. G. B. Nichols, donations of 25*l.*, 15*l.*, 10*l.*, and 5*l.* respectively, to be offered as premiums for designs "for the ceramic treatment and decoration of the block façade" of the building. A competition was resolved upon, as the preliminary announcement of Messrs. Hope, M. D. Wyatt, and J. C. Robinson, the judges appointed, states, with the view not only "of enhancing the beauty of the structure itself," but also "creating a systematic interest in ceramic architecture in its artistic and its practical aspect, by directing the attention both of artists and manufacturers to the subject." A "block elevation" was supplied; and the forms of the windows, and the positions of many of them, with constructional arrangements connected with the decorations, were left to the competitor's discretion. Allusion was made to the vehicles of decoration, as ceramic ware, coloured bricks, mosaics, and terra-cotta, "calculated to resist the climate of England." The designs were to be sent in on or before November 2nd in last year; and, after the awards, they were to be exhibited at Burslem, and in Conduit-street. Competitors were to acquiesce in the exhibition, and in the publication of their names. Somehow, the latter part of the condition has not been wholly carried into effect. Ten designs are shown in the Conduit-street Exhibition; but several of them, which did not receive premiums or honourable mention, have not the names attached. The committee of the Institute did not pledge themselves to the actual carrying out of the decoration, but expressed their desire to engage the services of one or more of the prize-men in the preparation of working drawings for the decorations should they be required, the structural arrangements remaining in the hands of the architect of the building.

We must say, first, of this competition, that it is no exception to the general issue of such announcements. The talent and work represented in several, and these the majority, of the drawings, is far in excess of the amounts offered as premiums, and of the value of the chance of benefit to the competitor. Moreover, as might have been expected, it does not now appear that any one of the designs for "ceramic decoration" will harmonize with the work as designed by Mr. Nichols. The general character of the present building, as we understand, is shown by a view which is in the Exhibition; and although we learn that some additions will be made to the architect's work, it is not easy to see how the designs themselves, which have been premiated, will contribute, excepting in suggestions which the architect of the building himself must be trusted to take and apply.

But this is not all that should be said of the effort to enhance the beauty of structures by the use of ceramic ware and other durable materials and vehicles of decoration. We must observe that the question apparently raised by the promoters of the competition, is not simply the substitution of terra-cotta for stone,—with required modification that might be involved, of mouldings and ornamentation,—which deserves independent consideration; but, it is that of a substitution of the polychromatic treatment for the generally monochromatic, as best suited to the circumstances of our climate and our smoke-production. In face of the fact that subsequent to the time of the Greeks, the greater number of the examples of good architecture have confined their coloured decoration to the interiors, or have used it only occasionally as background, or as enrichment set in the manner of jewels, it is desirable that change should not be made from the present system,—or that which leaves the colouring to nature, and wars with none of the effects of light and shade,—unless after due consideration.

Certainly, a material calculated to resist the smoke of our towns is a desideratum, so long as we are content to produce the smoke. Whether "the climate of England" be so much in fault as supposed, we hold to be not decided: for, there are numerous kinds of stone that have a character of centuries as used in buildings in the country, where we would not exchange the effect, only more beautiful from time, for that of any mosaic and pattern-work in bricks or porcelain. Evidence in favour of terra-cotta is better than that in favour of artificial stone; but the decorative advantages of glazed and coloured materials, in a smoke-laden atmosphere, are by no means evident, as they were deemed to be some few years since. There are now opportunities of judging of the effect of buildings which have been exposed to the atmosphere of London during several years. In these cases, coloured bricks and ceramic ware were used, no doubt, on such arguments as were present with the promoters of the competition for the decoration of the Wedgwood Institute. In those instances in which glazed tiles form one of the vehicles, the tiles retain their effect, whilst the remainder of the surface has become discoloured; and the present result is one that the architect never intended. Such is the case with the front of the Alhambra, in Leicester-square, where the cement has the usual dirty appearance of that material: such also is the case with the building at the corner of Buckingham-street and Duke-street, Adelphi, where the original contrasts in the coloured brickwork have been toned to a general blackness, whilst the tile-facings of the strings, originally prominentt, strike the eye more than ever, and now obtrusively. Passing to a case where the first effect was produced chiefly by the brickwork and stonework, the building in Southampton-street, Strand, by the architect of that named just before it, is losing much of that for which it attracted attention, and deserved praise; for, the original design, of which the coloured brickwork formed an important part, is undergoing rapid obscuration. Where architectural effect is based on the permanence of only one tributory to the effect, the result must be ultimately unsatisfactory, as has been shown; and we apprehend that it would be scarcely possible to make the design allowing for difference in the discoloration, and for opposite results at different times.

Of combination of an entire glazed surface of a façade, with decorative treatment, we are deficient of examples. The glazed bricks shown in former years with the materials in the Conduit-street Galleries, do not seem to have been largely used. Glazed bricks of some kind there are, however, in an entire front in Newgate-street. The appearance there is too much as if the front had been oiled.

Thus, some of the chief decorative, combined with structural, advantages predicted of the use of tiles and coloured bricks, must be considered as not proven. As to terra cotta, seeing the great steps that are made in manufacture of that material, we are disposed to suspend opinion concerning its successful application in lieu of stone. But this we do assert: the manufacture must be different to what it is shown to be in certain cases; we allude to several recent buildings, including railway-stations, where, though there is good distant effect, the near approach,—which in the case of a work of architecture always should disclose some fresh beauty,—only makes apparent the variations from rectiliniarity in the vertical joints of strings, or at the butting-ends of two blocks; or, failing the perfection of the manufacture, and probably as the most judicious course altogether for adoption, an entirely new system of design must be thought out, suited to the material, which even the Italian terra-cotta system cannot entirely be said to be. In the buildings to which we have alluded, there is another defect, the usual one where details that have been cast have been employed: that is to say, the same mouldings are repeated in different positions; thus a pretentious appearance is combined with one which is not that of art-work. It would be better to spare the mouldings in some of the cases: quantity of ornament challenges attention; and disappointment should not be the result.

It must, however, be admitted that what has been done by the Department of Art, at South Kensington, in the front of a building not yet seen by the public, is very important. There, where mouldings are made up of short lengths of terra-cotta, the objection as regards the butting ends of pieces, seems to be got over; whilst it is evident that the mouldings in stone have all the disadvantage of discolouration, those in terra-cotta retaining their original appearance.

The aim of this article is to suggest points for consideration.

As regards "ceramic ware," if understood to mean tiles and slabs of porcelain with minute ornamentation, these we suspect cannot be introduced largely, or with advantages including economy, on the exteriors of buildings. The ornamentation will contribute little more than plain tiles, to the general effect of the structure seen from ordinary distance; and surface ornamentation, modified by glaze, must in this respect be very inferior in force to the carved ornamentation of mouldings. Such decoration, with mosaic, for exteriors of buildings, had perhaps best be confined to semi-internal places, as insides of porches, and the ceilings of porticoes, to which we are by no means clear that mainly the Greek polychromy was not applied. In the use of coloured bricks, the power of colour to attract the eye and lead it away from mere forms, must not be forgotten, as it has too often been of late. Carved ornamentation may be not improved by the juxtaposition of striped brickwork: the effect of the colour in this, may be merely to distract the eye.

For the production of good architecture, resources in materials of the district in which the building is to be erected, should be examined and turned to consistent account. But the object is not the exhibition of such materials: these may even have to be rejected in favour of others more conducive to the art-result. The materials and processes must be subservient to the architecture, not the architecture to the exhibition of materials. How far colour, and ceramic manufactures, will go to render unnecessary a suppression of the smoke-nuisance, is we say not proven; whilst, whatever durable decorative work we provide, there must be an atmosphere through which it can be seen.

In the drawings exhibited in Conduit-street, we are able to see a great amount of design, and much that is suggestive, without evidence that the question has been looked at in any of the lights in which we have sought to place it. Most of the competitors have been induced by the announcement, to make colour and porcelain more prominent than we can as yet recognise they should be in the architecture of the exterior of a building, even one named after Wedgwood and to be erected in Burslem. The whole subject of "ceramic architecture" as supposed complementary of that of coloured brickwork, however, is novel; and considerable study of such designs as those before us, might be necessary precedent to absolute conclusions upon it. The mere division, coloured brickwork, of the question, we have often entered upon in notices of the Conduit-street Exhibition.

The design by Messrs. Edgar & Kipling (63 to 65) which received the first premium, uses red brick, with some dark-coloured bands, as the chief material, and introduces porcelain in panels, friezes and medallions; mosaic; and terra cotta in *voussoirs* of arches, window-shafts, impost and

cornice-mouldings, and string-courses. The most elaborately-painted porcelain is in spandrels to the porch, and in tympana to the upper windows. All the windows are arch-headed; those of the lower story having porcelain medallions in the head, with portraits. The front is divided by brick-pilasters which carry sedent figures in niches. The panels in the frieze have figures in white, on blue ground, representing various processes of the manufacture of porcelain, such as "Throwing." This design bears the motto:—

"What's *done* we partly may compute,
But know not what's *resisted*."

The design to which the second premium was awarded, "Sub Spe" (68), by Mr. L. de Ville, consists of a basement formed of an elaborate mosaic of brickwork, and generally of arch-headed openings and panels, some of which last contain pictorial representations of antique vases, whilst the centre panel has a portrait of Wedgwood. The cornice seems to be designed with appreciation of the difficulty of producing right lines in terra cotta, the corona being modified by indents, and supported by corbelling of arches. There is, however, more than the usual difficulty in fulfilling what is the office of a drawing, by our verbal description.

The third premium was awarded to Mr. John Ladds for a design (71), in which some of the more prominent features are pictorial subjects connected with the potter's art, represented by black outline, in the lower part of a tympanum to each pointed arch of the ground-story windows. The doorway is round-arched, of Early English character, with shafts of parti-coloured voussoirs. In the upper story are small pointed-arched windows, and panels and medallions with portrait-heads in colour.

The fourth premium was awarded to Mr. E. Power, for a design of what might be called Semi-Norman character (74 & 75). It is impossible without drawings to do justice to the details of each of the designs. The other designs include one (66) with the motto "Never Despair," having the channels of rustication in the ground story, coloured blue, and a long panel in the upper part of the front, with a subject in relief on a blue background, the whole being terminated by a Vignola cornice, wherein the spaces between the cantilevers are filled with rosettes in colour. The design with the motto "In Hope I Byde" (67) is remarkable from the general material being a neutral, or slate colour, which forms a background to the panelling. This last, with some other members of the architecture, is most elaborately enriched with patterns of various kinds, in colour, and displaying much design. The drawing is the result of considerable labour. The design with the motto "Monitor" (70) is not attractive from its details of form, including the pointed arches; but in treatment of colour it has some merit. The chromatic effect is given chiefly by red brick jambs, and red and white voussoirs, and a general grouping. In the centre of the upper story is a range of pointed arches, enclosing portraits in colour. Some of the piers have floral decoration in panels; and parti-colour is effectively introduced in some of the string-courses.

The whole of the ten designs deserve patient examination.

The chief competitions not mentioned here or in a former number, from which drawings are contributed to the Architectural Exhibition, are those for the Holborn Valley Improvement, and Freemasons' Hall & Tavern. The few designs which there are for Blackfriars Bridge were mentioned in one of our first articles. The designs for the Holborn Valley Improvement are by Mr. F. Marrable (81, & 86 to 88), Mr. F. Wallen (82 & 83), and Mr. J. W. Papworth (92), the bridge only,—an architect's treatment of the class of structure; and, we may be allowed perhaps to say, therefore, effective. The designs for Freemasons' Hall are those by Messrs. C. H. Cooke, L. de Ville, F. P. Cockerell, W. J. Green, J. W. Papworth, and Wyatt Papworth. But this competition was noticed in our pages at the time. Mr. Cockerell's plan does not seem to have undergone modification in details wherein it seemed defective.

In the department of building materials, in the Exhibition, we will not say there is nothing deserving our attention; but there is little that we have not noticed on previous occasions.

NEW THEATRE.—In Bradford a theatre is about to be established by a joint-stock company, under the management of Mr. Buckstone.

THE PATENT OFFICE.

NEVER since the famous debates on the "Act concerning Monopolies" passed 241 years ago, has there been so much legislative preparation for reform of the patent law, and of the means for carrying out that law. A Patent Commission appointed by Parliament has been sitting since the spring of the year 1862, and Lord Stanley, one of its members, lately promised, from his seat in Parliament, that the report should be published at Whitsuntide. This hope has not been fulfilled, but we understand that the report is in type and will soon be issued in one of Mr. Hansard's blue wrappers. The distinguished names of Mr. Grove, Q.C., and Dr. Fairbairn are to be met on the list of the commission; but the fact that the majority are lawyers raises a doubt in the cynical mind whether patent legislation will be much cheapened; whether the delightful intricacy of the labyrinthine mazes of patent litigation will be narrowed into that straight line which is supposed to be the shortest distance between two points; and whether the able and eloquent gentlemen who are the well-paid guides of this interesting labyrinth, will find it worth their while to cut down the hedges, fill up the ditches, straighten the paths, and set up a simple sign-post for guidance or warning, or both.

In the next place, as we lately mentioned, a Parliamentary Select Committee, moved by Mr. Dilwynn, is now sitting to investigate, for future reform, the present condition of the Patent Office Library at Southampton-buildings, and of the Patent Museum at Kensington. And lastly, two barristers, one of whom is the veteran patent barrister, Mr. Hindmarch, Q.C., have been appointed by the Patent Commissioners to sit and examine into some complaints, apparently about the official conduct of Mr. L. Edmunds, the Clerk of the Commissioners. We may here remind ourselves that what is termed by courtesy the British Patent "administration" consists, firstly, of the three Patent Commissioners, viz., the Lord Chancellor, the Attorney General, and the Master of the Rolls for the time being. Then come the Superintendent of Specifications, Mr. Bennet Woodcroft, C.E., and the Clerk of the Patent Commissioners, Mr. Lennard Edmunds. The great law officers of the Crown are too busied by their onerous duties to give much attention to the Patent Office, its Library and Museum. Their time is too much taken up in helping to administer the enormous revenues of this country. True it is that these revenues and this prosperity have been mainly derived from Dudley's blast furnace, Cort's rolling-mill, Neilson's hot-blast, and Bessemer's cupola; from Newcomen's engine, Watt's condenser, Stephenson's locomotive, and Symmington's marine engine; from the spinning and weaving machinery of Arkwright, Crompton, and Roberts; from Bennet Woodcroft and F. P. Smith's screw propeller; from Bramah's hydraulic press; from the electric telegraph; from the steam hammer; from Howe's sewing-machine, from M'Cormick's reaper, Fowler's steam plough, and Meikle's thrashing-machine. . . . . No less true is it that every one of these great inventions, with some 40,000 minor, but connected and connecting, discoveries, have been patented; that the original and often rude descriptions and drawings of all these inventions may be seen in a dingy and ill-lighted room in Chancery-lane. But then the administration only treats these things, and these laws, and these patentees, as the mighty river close by is treated by the millions who cross its splendid bridges, or who navigate its stream. How many amongst Londoners have been to see the source of the Thames? How many of us even know where the Thames takes its rise? We sully its stream by our negligence, we make all we can out of it, and we neglect and ignore its source. The three great law officers of the Crown receive nearly 10,000*l.* per annum for issuing and stamping patent warrants. It is perhaps fortunate that this sum is not despicable in amount, or these eminent men might otherwise forget to draw the money.

It has been often the case in England that one man has devoted himself, with true English pluck, to the reform of a particular abuse; that one unaided Englishman has devoted his life to a victory over English obstructiveness. Some of our most valuable institutions have been originated by such means. It is scarcely necessary to remind our readers that this has been the case with the Patent Office Library, with its specifications, its indexes of specifications, its abridgments of specifications, and its valuable collection of books; with the Patent Museum of Kensington, and its inestimable and unreplaceable collection of historical machines, portraits, models, and specimens. The greater portion of the models at South Kensington, and a goodly number of the works at Southampton-buildings, are indeed the private property of the principal founder of both institutions. Complete, and yet incomplete, as they are, the foundation of these invaluable public establishments is mainly due to Mr. Bennet Woodcroft, C.E. Himself a successful inventor and discoverer, he knew by hard personal experience the danger of patenting an apparently new thing without a previous search, and the difficulty of making that search without the aid afforded by the accumulated labour of indexes. His claims to gratitude are well known to all inventors and patentees, not merely in England, but in every civilized country;—for, with praiseworthy openness and liberality, complete sets of all the English specifications taken out since 1610 have been sent to every civilized capital of the world. As Superintendent of the Specifications, Mr. Bennet Woodcroft receives 1,000*l.* per annum; and he is the *honorary* Superintendent of the Patent Museum at South Kensington.

We do not exactly know in what consist the duties of Mr. Edmunds, the clerk of the Commissioners. We suppose that they are highly important, as, according to the Civil Service estimates, this gentleman receives a total of about 2,000*l.* per annum of the nation's money. On the other hand, the fact that Mr. Edmunds spends his time during the five months' recess of Parliament in the healthy and invigorating search for fresh air (and, some say, for business) in the North, would seem to militate against the supposition that his presence is indispensable to the purposes of the Patent Office and Library. Not that Mr. Edmunds's duties are confined to Southampton-buildings. He is also, we believe, Reader in the House of Lords. Some irreverent radical has compared the House of Lords to a brake on the carriage of the State. Of course, a brake is very useful: it often saves the neck of the driver; and we not merely wish that our constitution may always have a good brake, but that Mr. Edmunds may be Reader to the House of Lords for the next thousand years. At the same time, and we speak from experience, we must say that Mr. Edmunds imports rather too much of the braking element into the Patent Office Library. Some time ago he reduced the number of attendants in the Patent Office Library to a single individual,—we are, however, glad to say that he has since restored a portion of the assistance. For "want of room," he ordered the discontinuance of about half the foreign publications. This order he has since rescinded, but no purchase of new scientific books has been made for a long time; and in this way the first volumes of important works are there (such, for instance, as the first volume of Dr. Percy's "Metallurgy"), but not the subsequent volumes. About three weeks ago Mr. Edmunds directed that certain papers should be presented for each "reader to fill in date, and to write his name and address;" and "to write the title of *each* book, periodical, or specification he may require."

No complaints have ever been made as to any loss of books. These arrangements greatly affect the efficiency of the library, and, indeed, a strict adherence to them would defeat its purposes. We, and doubtless many others, have had occasionally to go through several hundreds of specifications; and to write each heading down would be a great obstruction and loss of time. We believe, however, that this order, also, has been partly modified; but the continual annoyance and derangement of business caused by the putting forth, the alteration, and the rescinding of these orders, give one the idea of an establishment ruled by the fitful vagaries of disease. Another complaint against the Clerk of the Commissioners is that he has refused to allow the Abridgments of Specifications to be proceeded with. This is a theme of continual grumbling amongst all connected with invention and patenting. The reason of the diminution of attendance, of the cessation of the purchases of the scientific works, of the total stoppage of the work of abridging the specifications, has been, we believe, publicly stated by Mr. Edmunds to proceed from motives of economy on the part of the Treasury. This is in the face of the facts that there is an annual surplus of 10,000*l.*, after deducting all the enormous expenses for chaff

wax and red tape, and an accumulated surplus of 220,000*l*. Why, 2,000*l*. would go a long way in purchasing scientific works, and in continuing the Abridgments.

Quietly and calmly looking at the question, it will be seen that in patents or no patents, in a good patent law or a bad patent law, are involved most of the foremost interests of the day. Even a Chancellor of the Exchequer would not despise the annual surplus of 40,000*l*. derived solely from the pockets of patentees, and still less the accumulated surplus of 222,000*l*. At least the great law officers of the Crown can scarcely look with disfavour on the eight or ten thousand pounds annually flowing into their pockets from the dingy purlieus of Southampton-buildings. If Bessemer's patents for making steel were to-morrow put up for auction in the City, they would probably fetch more than a million; and, amongst numberless other instances, the English patent for the little apparatus of Giffard for feeding boilers, will probably bring in, from first to last, at least 100,000*l*. Undeterred by the skeletons of ill success that strew the way, an eager crowd of inventors will always push, even through a Sahara-like desert of disappointment, towards such an oasis "of golden joys." Crowds of vultures and jackals, in the shape of patent agents, will never cease to flock round the annual caravan, from three to four thousand strong, of patentees. Nor does the analogy stop here. The stately lion is said to be led to his prey by the sagacity of the jackal. The blatant ignorance and the barefaced cupidity of some of the existing patent agents will, in a different way, perform a similar function; and the thus favoured nobler carnivora, in the shape of patent solicitors and barristers, will carefully save the perennial supply of such fat prey from total destruction. When 30,000*l*. or 40,000*l*. continue to be spent on such patent cases as those of Betts *v.* Menzies, it is not likely that lawyers—the best represented class in Parliament—will abolish the patent laws. In spite of Sir William Armstrong—in spite even of a whole battery of his guns—patents, patentees, patent agents, patent solicitors, and patent barristers will continue to flourish. Even the *Times* once stated that "it was the discovery of Arkwright that enabled England to bring to a successful conclusion the wars against France." The same merit was ascribed by Jeffries to Watt's invention, and probably the truth lies between both. Is it not, therefore, suicidal to allow the stream, bearing such great interests, to be hemmed in by paltry obstructiveness?

THE ARCHITECTURAL PUBLICATION SOCIETY.

THE annual general meeting of the subscribers to this society was held at the Galleries, No. 9, Conduit-street, on Friday evening, May 27th, the chair being taken by Professor Kerr.

Mr. Arthur Cates, the hon. sec., read the minutes of the last meeting, and the report and audited balance sheet, from which the following are extracts:—

"The expectation that the second part of the plates for 1861 would have been issued shortly after the last annual general meeting, was from many causes frustrated, and the delivery of that part has only been completed within the last few days. The delay, however vexatious, has not been without good results, for, while the subjects selected to form this part were in progress of arrangement, an opportunity occurred of greatly increasing their interest and importance. The article 'Grisaille' being in preparation for the text, Mr. J. W. Papworth kindly obtained for the two illustrations just issued the co-operation of Mr. Charles Winston, who, after an examination of the parts already issued, was so obliging as to prepare, for this special purpose, drawings from examples in Salisbury Cathedral. Mr. Winston executed these drawings in the most brilliant manner, and also watched over their reproduction in chromo-lithography with earnest attention. The care devoted to these plates by the lithographer and printer has occasioned the greater portion of the delay, but the Committee hope that the result will fully counterbalance the inconvenience.

The subjects for the plates forming the remainder of the part, viz., Fortress, Girder, Girder Bridge, Granary, Half-timber House, Lantern, Loggia, Metal Work, and Staircase, have been selected from the portfolios of Messrs. Edward Adams, G. R. Burnell, J. T. Christopher, Octavius Hansard, Thomas Vaughan, J. B. Waring, J. W. Walton, and Alfred Waterhouse, to whom the best thanks of the society are due for their liberality in permitting the reproduction of their drawings for the advantage of their fellow-subscribers."

"The Committee much regret that no adequate response has been received to the invitation for contributions and suggestions prefixed, with a 'List of Terms' to the last part issued. They had hoped, that by thus directing the attention of the subscribers to the actual portion of the work in hand, they would have aroused fresh interest, and opened up fresh sources of information. In the forthcoming part they will renew the experiment, and they earnestly hope that this, together with the list of subjects for illustration, will receive the attention and elicit the active assistance of every member.

The accounts show that the total receipt for the fourteenth year, 1861, has been 535*l*. 6s. 2d., and the total expenditure 452*l*. 17s. 1d., leaving a balance of 82*l*. 7s. 10d. to be carried forward to the credit of the following year, 1862, on account of which 41*l*. 10s. 4d. have up to the present time been received, and 6*l*. 1s. 9d. expended, leaving 34*l*. 8s. 7d. available for the production of the issue for that year. On account of the sixteenth year (to be extended to end December 31, 1865), 211*l*. 16s. 1d. have been received, and 48*l*. 14s. 3d. expended, leaving a balance of 163*l*. 1s. 10d. available."

The Chairman in moving the adoption of the report remarked on its being somewhat more apologetical than is usual in reports, but not so as to awaken any feeling of dissatisfaction in the minds of the subscribers. He then entered on the value of the Architectural Publication Society to the architectural profession, and defined the purposes which its existence serves as two-fold;—firstly, the production of literary and graphic matter, year by year, from novel and valuable materials; and secondly, the consolidation of professional union upon the best of all grounds, namely, that of substantial scientific learning. To those who might be inclined to say, looking at the publications collected as they now are in the bulk, that the Society had not done much, he would answer that although, looking at the volumes, one might be inclined to agree with this opinion at first sight, yet looking not merely *at* the volumes but *into* them, the conclusion was forced that the Society had done a very great deal. The committee of this society were entitled to the credit of having, with persevering tact and skill, selected only such matter for publication as would be of enduring interest and value; and he was decidedly of opinion that, many years hence, the publications of this society would be quoted for their solid practical weight. As regarded his own personal experience, when he had occasion to look into delineations, engravings, photographs, or whatever it might be, he found the illustrations published by this Society the best that he could obtain. Those illustrations were not selected upon any fashionable or transitory merits, but upon those which, to a man who looks for thoughtful materials in architectural design alone, afford him what he could wish. Then, as regarded the Dictionary, the great literary work of the Society, he could also speak from his own experience, that having had occasion during the last two or three years to read up scientific matter upon a great variety of professional topics, he had found the "Dictionary of the Architectural Publication Society" to be the best work of its class that he could look to. The characteristic beyond all others which the publication of this Society possessed, although a negative one, was most important: he meant the total absence of *book-making*. Using the term in a sense thoroughly well understood, book-making was the curse of literature at the present day: authority after authority might be consulted—new book after new book looked into, in an endeavour to find some variety of reliable information; and ninety-nine books out of a hundred gave you the same facts hashed up in different form to cover paper, until it became a mere weariness to the flesh to go farther than the first search. The elaborate system of checking the manuscript, which was the rule of the committee, was the cause. Every gentleman who contributed matter to the "Dictionary" did so upon the distinct understanding, to which he honourably submitted, that his work must be subjected to the criticism of his colleagues; and so well had this been carried out, that no disagreement of any magnitude has ever occurred, which was a very great thing to say. This system necessarily occupied time.

If any gentleman wished quantity rather than quality, he must go elsewhere: if he wished quality rather than quantity, he had it in this Society, whose maxim was not to measure their work "super.," but "solid;" not to look how many yards of paper it covered, but to put it in the balance of knowledge, and see what it really weighed. But there was another accident, so to call it, that was incidental to administration of this kind, and that was the risk of our writers and administrators breaking down. This was just the sort of work to make men break down; and it appeared that the progress of the work had suffered during the last two years on account of the ill-health of some of the most valuable workers, which was just what might be expected; and great allowance must be made as to the question of progress. A work of this kind could not be carried on except by determined perseverance, involving discreet and intelligent patience. As regarded the financial position of the society, it was decidedly good: in fact, the funds were obviously able to keep in advance of the rate of literary progress; and, indeed, so much so as to require a special act of adjustment. The proposal which the committee made to drop two years by turning three years into one, seemed to him an exceedingly sensible and business-like proposal, serving to cure all difficulties as regarded arrears.

Mr. H. R. Newton said he had great pleasure in seconding the chairman's proposition, that the report should be adopted; and though he could not add much to the subject, which the chairman had so ably handled, yet he might say that he did not agree with him in thinking that the statement was at all an apologetical one. It was thoroughly explanatory, and he did not believe that any society could ever get on prosperously, at all events not one which looked to the work it produced, without thoroughly explaining to its members what its difficulties were. The chairman had gone fully into the matter, and therefore he would only say that the statement concerning the "Dictionary" was a most satisfactory one. Taking the assurance of the secretary that the publication would be accelerated during the next year, and the proposal to condense the three years' subscription into one, he felt that the report was the most satisfactory one they had had, because it fairly stated their difficulties, and showed that they were pushing on the publication of the "Dictionary," with due regard to the quality of the standard work which they were producing.

Professor Donaldson, in moving a vote of thanks to Mr. W. Papworth and Mr. Cates, the honorary secretaries, said they all knew the services of Mr. Wyatt Papworth; how earnest he had been throughout; the very business-like manner in which he had conducted their proceedings; and the intelligence which he brought to every matter in which he was concerned. As to Mr. Cates, they all knew that he was a thorough man of business, and worked with a great deal of earnestness for the good of the Society. As to the publication, he thought they would gain a great deal if they could introduce a few more illustrations. In an art like theirs, he thought that illustrations were exceedingly necessary. There was much which could not be explained in words, but which one or two lines would thoroughly bring home to the conviction of any person acquainted with the subject: there was much in architecture which was obscure if left to be described; and he believed it would do them a great deal of good to have more illustrations.

Mr. Wyatt Papworth, in thanking the meeting for the warm expression of their feelings towards himself, said that with regard to the woodcuts, he could only say that, if the committee said it should be done, they of course would only be too happy to do it: but it must be recollected that they would add a very great expense to the work. He had no doubt, however, that the committee would take the subject of Mr. Donaldson's suggestion into their consideration.

Mr. St. Aubyn, in moving a vote of thanks to the contributors of sketches, said that all those who had seen the beautiful plates which had been contributed by Mr. Charles Winston, would readily agree in awarding him the praise which had been mentioned in the report. He understood that Mr. Winston had by his own hand copied the illustrations from Salisbury Cathedral, and had reduced them to the size in which they were seen in the work. He thought, too, their best thanks were due to Mr. John Papworth, who had been instrumental in inducing Mr. Winston to give them the advantage of his great skill in drawings of that kind.

Mr. John Papworth, in seconding the resolution, disclaimed that portion of the praise which had been passed upon him, and described the readiness with which Mr. Winston gave his assistance. This vote and a vote of thanks to the chairman being carried, the meeting separated.

BELFRIES AND BELL-RINGERS.

WE have received a communication, signed "George Morris, Steeple-keeper of St. Martin's-in-the-Fields," from which we condense and arrange the following article.

It is to be regretted that the ministers and churchwardens of most of the principal mother churches of London so greatly neglect the interiors of the towers and spires of these edifices. The interior walls are, in general, covered with dust and cobwebs, accumulated for many years past. It is often difficult to get a proper set of ringers, especially for Sundays, at many of our churches, on account of the dirt, which spoils their Sunday clothes, and compels them to return home at the end of the peal instead of going to church. Even when churches have been repaired and beautified, their belfries are but too generally forgotten, and re-opened dirty as they were, although here and there a few parishes do clean and renovate their belfries a little. The rector or vicar and churchwardens really ought to visit these places once or twice a year, and see that all is kept in good order, and the ringing-rooms clean and comfortable for the ringers. Why are not the bells in the towers as much cared for as the organs in the churches? asks Mr. Morris, in the pride of his profession. Some time ago, in the *Builder*, he continues, it was asked why young men attending church did not go up and assist in the chiming of the bells for service, so as to let the worshippers hear something more than three bells in a steeple where there are eight bells or more. The young men are clean, and the bells and belfries are dirty: that is the reason; and were boards of health to see the inside of a great many belfries, they would be surprised to find that there, at least, cleanliness was not *next* to godliness. Here is a black list of some of the churches alluded

to:—St. Andrew's, Holborn-hill, with a tenor and eight bells only 300 years old; St. Giles's, Cripplegate, a tenor and twelve bells; St. Leonard's, Shoreditch, twelve bells—great bell cracked; St. Mary-le-Bow, Cheapside, commonly called Bow Bells—houses left in Bow-lane to keep Bow Bells in repair, and, I should think, the steeple clean too; St. Saviour's, Southwark, very beautiful tenor and twelve large bells, a large ringing-room with a great many marble tablets, which cost the various societies of ringers in London a good deal of money—one or two as much as 20*l.* each,—and yet the walls are so dirty that the steeple spoils the look of them, handsome as they are. Nearly all the other steeples after we pass St. Michael's, Cornhill, are in as neglected a state as those above mentioned. How is this to be accounted for? Awake, I say, from your slumber, and arouse the noble-minded men of our parish churches, and let us have them all clean and comfortable. I am sure there are many poor whitewashers and painters in most of our parishes who would be glad of a day or two's work; and, at a mere trifling expense, all the evil could soon be remedied. Most of the east-end of London church bells are also out of order, and hardly ever ring for any joyous occasion.

Why should not one church ring its bells as well as another? Besides, they get out of order more by standing still than by constant ringing. The pretty peal of eight bells of St. Paul's, Shadwell, has been out of order for twenty years; and about twelve years ago they could have been put in order for about 10*l.*; now, through the twelve years more neglect, it will cost 30*l.* or more to get them in good ringing order; and this peal of bells is not above forty years old.

As to ringing and ringers, hardly any one knows their origin, or how the ringing societies are carried on. In 1620, a small company of gentlemen used to meet for practice of ringing in a little parish church at the corner of College-street, College-hill, Thames-street. The tower contained six bells, although now it has only two. On November 5th, 1637, the gentlemen referred to formed the present Ancient Society of College Youths, which has been carried on with great success to the present time. Intricate as the science of bell-ringing is, noble-minded men of this society, so far back as 150 years ago, went to work and pricked out in figures many touches in grandsire triples for eight bells, quatres for ten bells, cinques for twelve bells, and Steadman and triple-bob-major methods. Also, 100 years back, the society, at their own expense, placed the two small bells in St. Bride's tower, Fleet-street, to make the present peal of twelve bells; and after that, about the year 1730, twelve members of the society rang the first peal of triple-bob-maximus that ever was known to have been rung on twelve bells. Rear-Admiral Sir Francis Grey and Lord Chief Justice Hale were members of the society and rang in the above peal. There is still a record of this in St. Bride's ringing-room. The gentlemen of the Ancient Society now living have followed in the footsteps of their forefathers, and have rung many a peal of three, four, six, and even seven hours at a time, on most of our peals of beautiful bells, at various churches in town and country; and tablets, written in gold, as to their doings, can still be seen and read in all our principal ringing-rooms in London and its suburbs.

The Ancient Society of Bell-Ringers consists of a master, treasurer, secretary, and stewards, elected once a year. The head-quarters of the society are in St. Saviour's Church, Southwark; and at the Yorkshire Grey, Borough Market, there is upwards of two hundred pounds worth of property belonging to the society, and this house is the society's meeting-house. The society are parochial ringers at the churches of St Mary-le-Bow; St. Michael; St. Magnus-the-Martyr; All Hallows, near Tower Hill; St. Saviour, over London Bridge; Trinity, Trinity-square, Borough; St. Peter, Walworth; St. Giles, Camberwell; also St. Giles, Cripplegate. There is another society, called the London Society of Cumberland, established in 1745, at St. Leonard's, Shoreditch. It takes its name from His Royal Highness the Duke of Cumberland, who, on his arrival in London after the battle of Culloden, heard St. Leonard's bells, the first that reached his ears after some hundreds of miles of travel, and sent a handsome present in money, together with a gold medal with his medallion portrait in the centre. This medal is worn by the master of the above society to the present time. The greatest achievement of this society in olden times was a peal of 12,000 changes of triple-bob royals, in St. Leonard's, Shoreditch, which took nine hours and five minutes, on ten bells, on Saturday, March 27th, 1784. There is a record of it in the Tower, written on copper. Since that time noble work has been done by the present members;—in 1837, a grand peal of Steadman quatres on Bow bells; also, in 1840, a peal of triple ten in, at the same church. Mr. W. H. Burwash, the present sexton of St. James's, Clerkenwell, rang the triple to both peals, and conducted them; and Mr. A. C. Frost rang the tenor to both: her weight is 2 tons 13 cwt. 22 lb., the greatest bell rung by a single man in England. The society, in 1820, added two new small bells to St. Leonard's, Shoreditch, to make a peal of twelve bells, at their own cost,—over 100*l.*; but it is to be regretted that the great bell of the peal was accidentally cracked two years ago: the parish ought to replace it. Many grand peals by this society have been rung, and recorded in most of our ringing-rooms. One in St. Saviour's, Southwark, by the London Society of Cumberland, cost twenty guineas. The last peal of any note was rung by this society at St. Martin's-in-the-Fields, on November 10th, 1862,—a 5,050 changes of Steadman quatres, in three hours and twenty-eight minutes, in honour of his Royal Highness the Prince of Wales attaining his majority. The peal was composed and conducted by Mr. John Nelms, who rang the triple, and I rang the tenor: her weight is 1 ton 14 cwt.

This society is conducted also by a master, treasurer, secretary, and stewards, elected every September. The head-quarters meeting-house is "The Green Man," St. Martin's-lane. The parochial ringing churches of this society are at St. Martin's-in-the-Fields and St. James's, Clerkenwell.

We have another society in London, called the St. James's Youths, which was established on St. James's-day, 25th July, 1824, at St. James's Church, Clerkenwell. The grandsire-ringing principally belongs to this society, as it is the first rudiment of the half-pull ringing. This society has done much for the advancement of the bell-ringing science. About twenty-three years ago the society rang a peal of 12,000 changes of grandsire quatres at All Saints Church, Fulham; also 7,325 of grandsire cinques at St. Martin's-in-the-Fields, in 1837; and many other peals besides, as recorded in London church-belfries. This society is conducted also in the same way as the other two. Their head-quarters are at St. Clement Danes, Strand. Mr. George Stockham is the bob-caller and conductor of the society, and also steeple-keeper of the church. The parochial ringing churches of the society are St. Andrew's, St. Sepulchre's, St. Dunstan's in the West, St. Clement's, Westminster Abbey, St. John's, Waterloo, and St. Mary's, Lambeth.

A great many of the out-post church bells are rung by different companies of so-called change-ringers. The ringing of these companies is commonly called, in the country, churchyard bob: it is the first step to the art of ringing.

Church bell-ringing is one of the best exercises any young man can aspire to: it expands the chest and exhilarates the mind, and I am sure it is far before any other exercise in the world. The respectability of the ringers in our three societies in London has very much improved of late years; in fact, I think the art of ringing was never carried on more satisfactorily than it is at the present time. The parochial ringers of our three societies in London now consist of a great many independent gentlemen, tradesmen, artisans, and mechanics; also a surprising number of respectable young men have lately come into the exercise. And if our church-wardens will only give us cleanliness and a little encouragement, the inhabitants, I am sure, will soon have more and better musical chiming for Divine service on Sundays, and also the joy bells on fitting days.

Great encouragement has been afforded to the science of bell-ringing by the peals of bells given by Miss Burdett Coutts to several churches, as at Rochester-row, Westminster, in the tower of which, there is a fine peal of eight bells, with a tenor of 1 ton 5 cwt.; at St. Ann's, Highgate-rise, where there is also a peal of eight bells; and at Carlisle, where a fine peal of bells is to be placed in the tower of a new church, of which Miss Coutts has laid the foundation stone. Our Church of England ministers have good reason to be proud of such gifts.

We have now in London and different parts of the United Kingdom about 14 peals of twelve bells; 50 peals of ten bells; 600 peals of eight bells; 700 peals of six bells; and about 400 peals of five bells; and a great number from one bell to a chime of four bells; and all these peals of five to peals of twelve bells cost each from 300*l.* to upwards of 2,500*l.* So you see what a merry ringing island England is; and a melodious peal of bells is perhaps not less captivating than the finest toned instrument ever yet invented. The late Mr. H. E. Powell, of Quick's Park, Isle of Thanet, was a very good ringer and fond of bells: he built, at his own expense, the tower and spire standing in the above park, and it contains a pretty peal of twelve bells: the treble is about 3 cwt. and the tenor is 1 ton. Mr. Powell was a member of the College Youths, and used often to ring with the societies in London, and also entertain them at his mansion, where they rang in the summer-time. The gentleman who occupies the mansion at the present time does the same. Mr. Leonard Proctor, of Bedington, Herts, has also a pretty church on his estate; the tower has a fine peal of bells. Mr. Proctor is a member of the London Society of Cumberland, and is a very good ringer; in fact, he can ring on any method in the ringing books on eight bells. He very often rings with us in London, and frequently entertains the London Society at his estate: he has also a complete company of ringers in his employ there.

ARTESIAN WELLS.

INSTITUTION OF CIVIL ENGINEERS.

THE paper read May 24 was "On the Machinery employed in sinking Artesian Wells on the Continent," by Mr. G. R. Burnell.

It was stated that the extraordinary depth of some borings lately made for the purpose of obtaining an artesian supply of water, had led to great changes in the well-borer's art, and to the introduction of various mechanical processes, and of modifications of machinery, into the merits of which it was desirable to inquire.

The first well of this kind was that at the Abattoir of Grenelle. This was sunk, after eight years' incessant labour, a total depth of 1,797¼ feet (English), and gave rise to many inventions for the purpose of facilitating the progress of the works, for removing the broken tools, for the introduction of the pipes, and for carrying on observations at various depths from the surface. Subsequently, many similar wells were sunk on the Continent, particularly in the Rhine provinces, but they were all of small diameter. The German engineers introduced important modifications in the tools. Ænyenhausen made the striking part, used for comminuting the rock, to slide, so as to fall always through a certain distance, and thus avoid a jar. Kind had already applied his system to large excavations for winning coal-mines, when he was intrusted by the Municipal Council of Paris, with the execution of the well at Passy. This was to have a diameter of 1 metre (3 feet 3$\frac{7}{8}$ inches), that of Grenelle being only 20 centimetres (about 8 inches). The difficulties encountered in carrying the excavation through the clays of the upper series were so serious, that six years and nine months were occupied in reaching the water-bearing stratum, which was ultimately attained at a depth of 1,913 feet 10 inches from the surface, when the yield was 3,349,200 gallons per day of twenty-four hours, subsequently increased to 5,582,000 gallons, and then continued at 3,795,000 gallons per day. The total cost of the well was 40,000*l.* It was lined with solid masonry for a depth of 150 feet; then wood and iron tubing was introduced to 1,804 feet from the surface, and below that there was a length of copper pipe pierced with holes.

The results of this well had been so satisfactory, as regarded the quantity of water, that the authorities had decided to execute at once two additional artesian wells, and there were rumours that two others were contemplated.

There were three different systems of well-boring, mostly dependent on the nature of the tools; the Chinese, or M. Fauvelle's; the French, or rather the usual well-borers' plan; and M. Kind's. In the first, the motion given to the tool in rotation was simply derived from the resistance that a rope would exercise to an effort of torsion, and therefore the limits of application of the system were only such as would allow the tool to be safely acted upon. Besides, a considerable quantity of water was required to clear out the boring,

so that this plan had been almost universally abandoned. In the ordinary system of well-boring, the weight of the tools and of the solid-iron rods became so great, when the excavation was deep, that there was considerable difficulty in transmitting the blow of the tool, in consequence of the vibration produced in the long rod, or in consequence of the torsion. Hollow rods, filled with cork, and M. Ænyenhausen's joint, which permitted the tool to fall freely, and through the same height, every time it was released, were now employed. M. Kind adopted both these modifications, and in the well of Passy, he substituted oak rods for iron ones, as being lighter, and more easily counterbalanced in water. The products of the excavation were still most frequently removed by augers and chisels; and all the processes hitherto practised were considered to be more or less defective, as in every case the comminuting tool had to be withdrawn.

In the well at Passy, M. Kind employed a trepan to comminute the rock: it weighed 1 ton 16 cwt., and fell through 2 feet. This tool was composed of two principal pieces—the frame and the arms—both of wrought-iron, but the teeth of the cutting part were of cast-steel. The frame had at the bottom a series of holes, slightly conical, into which the teeth were inserted, and were tightly wedged up. These teeth were placed with their cutting edge on the longitudinal axis of the frame that received them; and at the extremity of the latter, there were formed two heads, forged out of the same piece with the body of the tool, which also carried two teeth, placed in the same direction as the others, but which were made of double the width of the latter, in order to render this part of the tool more powerful. It was by increasing the dimensions of these end teeth, that the diameter of the boring could be augmented, so as to compensate for the diminution of the clear space by the tubing that it might be necessary to introduce in traversing strata disposed to fall in, or to allow the waters from below to escape at an intermediate level. Above the lower part of the frame of the trepan was a second piece, composed of two parts bolted together, and made to support the lower portion of the frame. This part of the machinery also carried two teeth at its extremities, which served to guide the tool in its descent, and to work off the asperities that might be left by the lower portion of the trepan. Above this again were the guides of the machinery properly speaking, consisting of two pieces of wrought iron arranged in the form of a cross, with the ends turned up, so as to preserve the machinery perfectly vertical in its movements, by pressing against the sides of the boring already executed. These pieces were independent of the blades of the trepan, and might be moved closer to it, or further away from it, as might be desired. The stem and the arms were, lastly, terminated by a single piece of wrought iron, which was joined to the frame by a kind of saddle joint, and was kept in its place by means of keys and wedges. The whole of the trepan was finally jointed to the great rods, that communicated the motion from the surface, by means of a screwed coupling, formed below the part of the tool that bore the joint, which permitted the free fall of the cutting part, and united the top of the arms and frame and the rod.

SIGNS ON OLD LONDON INNS AND SHOPS.

THE jovial "bully rook" host of Queen Elizabeth's days has long since vanished, and there is much less familiarity now between the innkeeper and the traveller than was generally the case, even half a century ago. True, any one may still say, I can "take mine ease at mine inn;" but it is mostly in a more stately and solitary manner than formerly. The stage-coaches first much changed the primitive habits and conditions; but still greater alterations have been made since the introduction of railways. With the general change of manners, the style of the signs has been greatly altered; and, instead of pictorial representation, we have mere words, such as, "The Locomotive, Commercial, and Railway Inn and Tavern," "The Victoria Railway Inn," &c. The quirks and quiddities of the old English Boniface, often displayed on the inn signs, are disused, and the examples which remain are scarce.

In a poem of Queen Elizabeth's reign, mention is made of the Salutation, at Billingsgate, the Boar's Head, near London Stone, the Swan, at Dowgate, a tavern well known:—

> "The Mitre, in Cheape,—and then the Bull Head,
> And many like places, that make noses red."

There are also notes of the Boar's Head, in Old Fish-street; Three Crowns, in the Vintry; the Windmill, in Lothbury; the Ship, at the Exchange; the King's Head, in New Fish-street, "where roysters do range;" the Mermaid, in Cornhill; Red Lion, in the Strand; Three Tuns, in Newgate Market; and the Swan, at Old Fish-street.

In various quarters many old London taverns are mentioned. Amongst them are several Saracen's Heads: two of these have been more famous than the others. One of them was in Aldgate, and in Strype's time had a considerable trade: this has been swept away; but the Saracen's Head,—the once well-known stage-coaching house which, although the coaches do not frequent it now, will be long known by Mr. Charles Dickens's account of it,—still remains near St. Sepulchre's Church, Skinner-street, Snow-hill. In Water-lane, Tower-hill, there was, until lately, a well-known hostelry, called the Ship. In Leadenhall-street, on the north side, was the King's Head Tavern, where a meeting was held, in William III.'s reign, for the purpose of attempting to restore the Stuart dynasty. In the same street was the old galleried inn, called the Bull; also the Black Boy and Camel There were several signs in Old London, of the Three Tuns: one of these, in Aldgate, High-street, is mentioned by De Foe, in his "History of the Great Plague." In Bishopsgate-street, the most noted inns were the Sir Paul Pindar, the Old Catherine Wheel, the Swan, the Four Swans, the Vine, the Green Dragon, &c. The Sir Paul Pindar and the Four Swans still retain many of their original features, and the Green Dragon, although altered, is still a place of note. The Belle Sauvage would seem to have an origin different from that usually ascribed. Fuller tells us it was given originally by one Isabel Savage to the Company of Cutlers.

The Spread Eagle, the Tabard, near the conduit, and the Cross Keys, in Gracechurch-street, were long celebrated taverns.

The Ship Tavern, already mentioned, was a place of great resort amongst the captains of ships, for the transaction of business.

Respecting the King's Head, in Fenchurch-street, which has been enlarged and greatly altered, and is still much frequented, the *Gentleman's Magazine*, of 1790, says, "When the Princess [Queen Elizabeth] came from her confinement in the Tower, she went into the church of All Hallows Staining, the first church she found open, to return thanks for her deliverance from prison. As soon as that pious work was concluded, and the thanksgiving finished, the Princess and her attendants retired to the King's Head, in Fenchurch-street, to take some refreshment, and her royal highness was plentifully regaled with pork and peas." It is not unusual, even at the present time, for antiquaries to visit the King's Head Tavern, and partake of the same fare which tradition says was served for the refection of the princess. There are still preserved here some much-worn dish-covers, which are as old as the time of Queen Elizabeth. The interior of this inn is now fitted up in rather a common theatrically ancient style, which, although to a certain extent contrary to good taste, still shows a wish to preserve the memories connected with the tavern,—a place in existence as far back as 1504, and probably much earlier.

Many of the sites of the Old London taverns are still known, and the names of the original signs preserved: few of the devices, however, now remain. The Rainbow Tavern, in Fleet-street, so famous in connexion with Johnson, Reynolds, and Goldsmith, dates as far back as 1640. It was rebuilt in 1860. The Devil, and the Devil on Two Sticks, were inns of note in the City.

Some of the signs of old London—used not only by tavern-keepers, but by persons of all trades—are curious combinations; for instance,—the Magpie and Crown, the Magpie and Stump, the Magpie and Horseshoe, the Whale and the Hen, the Razor and the Hen, the Leg and Seven Stars, the Axe and the Bible, the Tun and the Tub, the Eagle and Child (armorial bearings of the Stanleys).

Bernard Lintot issued Pope's works at the Cross Keys, between the Temple gates; and not far off were the well-known signs of the Seven Stars and the Addison's Head. The Half Moon, a projecting sign still remaining on the south side of Holywell-street, was formerly over the shop of a fashionable stay-maker: at that time stays and corsets were almost entirely made by men.

Some of the best known of the Old London signs were the Queen's Head (a most popular device, especially in the reigns of Queen Elizabeth and Queen Anne), the Boulogne Mouth (afterwards corrupted into the Bull and Mouth), the Boulogne Gate, the Bolt and Tun, the Golden Fleece, the Flying Horse, the Spread Eagle. In Oxford-street, nearly opposite Rathbone-place, there still remains a sign which is said to have been painted by Hogarth: the picture has considerable merit as a work of art;—in it are represented a woman and her husband, crying children, and a magpie. The Good Woman was sarcastically represented as a woman without a head. Other old signs were the Catherine Wheel, the Hercules Pillars, the Bacchus and Tun, the Bag o' Nails (a corruption of the Bacchanals), the Blue and other coloured Posts, the Chequers, the Three Compasses, the Goat and Compasses (which some writers say is a corruption of "God encompasses us," but more likely a compound of two signs, that of the Goat and that of the Compasses, in the same way that the Magpie and Crown, the Goose and Gridiron, &c., were combined.)* The Swan with Two Necks (Nicks ?), the famous stage-coach house, has not long since been removed; but the large new building on the site is the centre, as was the old one, of a great traffic.

The Dukes of Cumberland, Dukes of Marlborough, Princess Charlottes, Dukes of Wellington, Marquises of Cornwallis, and many other signs in the metropolis of a similar character, mark, as do the names of streets, particular periods and historical occurrences.

The following may be mentioned as among known London signs:—the Cheshire Cheese; the Hole-in-the-Wall; the Star and Garter; the Yorkshire Grey; the arms of various crafts; the Sun; the Moon, in various phases; the Man in the Moon; Lions—Red, White, and Blue; Bears of various colours; the Bear and Ragged Staff; the Blue Boar; the Boar's Head, of famous memory; the Spotted Dog; the Elephant and Castle;† the Talbot; the Lamb; the Lamb and Flag; the Dun Cow, a very ancient sign, which probably originated with the traditionary "dun cow" of Guy Earl of Warwick; the Pig and Whistle; the Fox and Hounds; the Hare and Hounds, in the remaining portion of the Rookery of St. Giles's, which is a memorial of the days when the citizens, while inspecting the conduits, enjoyed hunting in this neighbourhood; the Fox under the Hill, in the Borough; the White Hart, the badge of an English king; the Roebuck; the Hen and Chickens; and the Angel. The Cock, which is very often found near to the Cross Keys of St. Peter; the Falcon, and many other birds and beasts might be mentioned, as London signs; but fishes, with the exception of the Dolphin, seem to have been brought but little into request. The Mermaid; the Green Dragon; the Coach and Horses; the Baptist's Head; the Noah's Ark; the Load of Hay; the Good Samaritan; the Vine; the Laurel Tree; the Wheat-sheaf; the Blue Bell; the Five Bells; the Roses, Red and White, having reference to the wars of the houses of York and Lancaster; the Artichoke; the Royal Oak; the Mitre; the Gun; the Comus; Albion; Britannia; the White Conduit; the Sutton Arms; and some hundreds of other London signs, have all obvious significance; and in the list given in the dry pages of the "Post-office Directory," a person who has thought of things of the past will find both amusement and instruction.

* On the subject of sign combinations, a writer in *Notes and Queries* says:—"This subject has been taken up by a literary contemporary, and some ingenious but far-fetched attempts at explanation have been made, deduced from languages the publican is not likely to have heard of. The following seem at least to be undoubtedly English;—'The Sun and Whalebone,' 'Cock and Bell,' 'Ram and Teazle,' 'Cow and Snuffers,' 'Crow and Horseshoe,' 'Hoop and Pie,'—*cum multis aliis*. I have some remembrance of a very simple solution of the cause of the incongruity, which was this: The lease being out of (say) the sign of 'The Ram,' or the tenant had left for some cause, and gone to the sign of 'The Teazle;' wishing to be known, and followed by as many of his old connexion as possible, and also to secure the new, he took his old sign with him, and set it up beside the other, and the house soon became known as 'The Ram and Teazle.' After some time the signs required repainting or renewing, and as one board was more convenient than two, the 'emblems,' as poor Dick Tinto calls them, were depicted together, and hence rose the puzzle."

† Amongst the inns recently discovered in Pompeii, one has the sign of the Elephant rudely painted on the pilaster which divides two doors. The animal is in the folds of a serpent and is led by a pigmy.

THE NATIONAL GALLERY QUESTION.

In the Committee of Supply, on the proposed vote of 10,000*l.*, for the year 1865, towards the erection of a new National Gallery at Burlington House, Mr. Cowper explained the altered views of the Government, and reviewed what had taken place in former years in the vain endeavour to settle this question. As to the proposed new building behind Burlington House, he said it was proposed that the building should be all on one floor; that it should be lighted from the top; that there should be three spacious galleries, of 200 feet in length and 40 feet in width, running parallel; that they should be crossed by three other galleries, of the same dimensions; and that there should be in the interstices galleries of smaller size and height, in which the smaller pictures could be placed. The estimated cost was 152,000*l.* If the question were not now settled they would probably go back to commissions and committees again for the next twenty years or so; and gifts would be lost to the country, as before, from want of space for pictures.

Lord John Manners moved an amendment for the rejection of this supplementary vote altogether. He thought the National Gallery ought to remain where it was; and it might be extended behind, either by removal of the barracks, or by carrying the gallery on columns over the drill-ground.

Mr. Cowper deprecated such an arrangement, and remarked that the workhouse would require to be removed as well as the barracks, and new buildings for them both erected elsewhere; and a new workhouse would cost 75,000*l.*, and new barracks 140,000*l.* He acknowledged that it might be best to hand over the present National Gallery to the Royal Academy.

Lord Palmerston explained his own change of views on this question, and admitted that he contemplated giving the use—not the property—of the present building to the Academy. Economy of expenditure and suitability of arrangement were his chief considerations. The present building would not only require to be enlarged, at great cost, behind, but must be rebuilt in front also; and the cost might be half a million, or it might be a million sterling: it was hard to say how much.

Mr. B. Osborne, Lord Elcho, and others, also spoke; and, on a division, Lord John Manners's amendment was carried by 174 to 122.

The Government seem to have mismanaged their own scheme. Members knew little or nothing of the building that was to have been erected behind Burlington House; and the supposed intention to hand over the present building to the Academy secured to the amendment all the votes of those inimical to the Academy or its continuance in the present building.

PROGRESS OF THE MAIN DRAINAGE AND EMBANKMENT WORKS.
